WHO CAN TELL HIM?—Elmira, N. Y., Sept. 26th. A game note in last week's issue reads: "Two New Haven gentlemen, during three days, are said to have killed at Essex, Conn., over 1,000 birds (rail). One day's score for one of the party was 248 birds on the tide, with but one gun."

Having had at least forty years' experience in rail shooting, the above interests me, and I am tempted to ask two questions, which seem pertinent:—

First, How long a time do they shoot "in the tide" at Essex? Second, Do rail rise singly there, or in flocks? I. B. C.

ALABAMA.—Mobile, Sept. 18th.—The first hunt of the season is thus recorded: Major Jas. C. Bush and Col. C. A. Holt returned yesterday from the first hunting trip of the season. Their bags showed seventy-five doves and twenty-five partridges. Gen. W. S. Goodall also contributed his share of good marksmanship. Major Bush says the partridges he killed were old enough to take care of themselves, and that he gave them every chance possible to escape, disdaining to shoot them on the ground or in a tree. We know the members of the Gulf City Gun Club will at some future time tender their appreciation of the Major's gallantry in the field, which he has always shown before the traps. S. C. O.

MASSACHUSETTS.—Spencer, Sept. 18th.—The members of the Sportsman's Club of this town are industriously practicing for the annual hunt, which comes off in a few weeks. Reconnoitering parties are daily skirmishing in every direction, all meeting with more or less success in bagging game of almost every description, from a gutter snipe to a barn yard fowl.

PENNSYLVANIA'S GAME GROUNDS.—Pittsburg, Sept. 24th.—If I understand your correspondent he wants to know of good hunting grounds for quail and grouse within 200 or 300 miles of Pittsburg. Now, good quail shooting will be hard to find in this locality, but one cannot go anis for grouse, as all our wooded hills are full of them. For both, I think Ohio, after the close season for quail ends, Nov. 15th, is the best field near us. West Virginia is good for grouse, and probably Green and Washington counties are the best grounds near Pittsburg. I. R. S.

BAY SNIPES SHOOTING.—Good Ground, L. I., Sept. 22d.—At Shinnecock Bay there is good shooting at late bay birds, and we expect them right along. Mr. H. H. Thompson, of the Erie, killed fifty-four in two mornings' shooting, mostly plover. We look for good shooting at Big yellow-bellied plover now for the next weeks or more. Duck shooting will commence Oct. 20th. I think the chance looks good. WILLIAM N. LANE.

TEXAS.—Indianola, Calhoun County, Sept. 15th.—Season very wet and game very scarce. A few flocks of blue-winged teal and broadbills are arriving. Fishing first-class. G. A.

NEW HAMPSHIRE.—Nashua, Sept. 6th.—Open season for partridge September 1st, but it has been so hot that few have been out. Pigeons are said to be plenty in the towns about here, but it is too dry for woodcock, and they have disappeared. WEBB.

FLORIDA.—Tampa, Sept. 17th.—The rainy season is about through here, and quail in abundance. I own fifty acres of land within a mile of Tampa, and know of six different covers on my place. One of our sportsmen killed young mallard duck in the vicinity of Tampa last week full of pin-feathers. The supposition is they bred here, of course. W. A. M.

MINNESOTA.—Pittsburg, Minn.—If any one thinks of coming here for duck shooting this fall, then the sooner the better. If for deer shooting, be on hand Nov. 15th. A week's notice and my team would be at Little Falls. If this is not sufficiently explicit, and any one writes for more information, do, please, inclose postage (all who have written neglected to do it), for ministers are never very flush with money. J. FRANK LOCKE.

NEW YORK.—Albany, Sept. 21st.—Woodcock very abundant this year. A party of four of us went out on a two days' hunt, Sept. 1st. We found partridges very scarce, and bagged three woodcock to every partridge. Our friend Billy Gough went up the river on Saturday last and bagged eleven blue-winged teal and two snipe. J. W. T.

WEIGHT OF WOODCOCK AND QUAIL.—New York, Sept. 18th.—Please give me weight of heaviest woodcock and quail shot in America. E. T. B. The heaviest reported woodcock and quail ever shot in America, it is safe to say, were not actually weighed, but guessed at. The note-books of our readers must contain some data on this point, and we shall hope to have reports:

CONNECTICUT LAKES.—Our correspondent, "Rangifer," writes that has had "a most delightful summer in the woods, being seven weeks and more at the Connecticut Lakes. Shot a moose, a big enough bull, whose head I managed to save. I hope soon to avail myself of your invitation to write something for the paper."

ROBINS.—A score or more of correspondents are informed that the New York gun law, as amended in 1880, permits the shooting of robins after Oct. 1st.

—An Sable has promised us some sketches descriptive of Canadian shooting excursions. Those who have read our correspondent's frequent contributions, will welcome these with interest.

## SHOOTING MATCHES.

BEST ON RECORD.—Our correspondent, "En Garde," sends us the following score of a match at glass balls, shot by the Danville Sportsman's Club and the Rochester Gun Club, at Rochester, N. Y., Sept. 16th; 18 yards rise; 20 balls each:—

DANVILLE SPORTSMAN'S CLUB.		ROCHESTER GUN CLUB.	
Drake	20	Adams	20
Warkley	20	Williams	19
Sweet	20	Townsend	20
Dorr	19	Jeffrey	19
Robbins	20	Hyland	19
Total	100	Total	100

As there was a tie in the score, it was decided that it be shot, allowing each shooter two balls. The Danville Club proved the victors, they scoring nineteen to their opponents' eighteen. The return match will be shot at Danville on Friday next. Our correspondent adds: "Am I in error in supposing this to be the best on record?" The proportion of balls broken, it will be observed, is 96 per cent., and, if we cannot affirm that this is the best on record, we are willing to advance the opinion that it is for these conditions, and we shall stick to it until sufficient proof is adduced to the contrary. But right here comes this report from the Haymoad, Mass. Sportsman's Club, shooting at 200 glass balls each, 100 double and 100 single from a rotary trap, other conditions not given:—

	Double.	Single.	Total.
C. A. Loud	98	99	197
R. A. Schafer	98	98	196
W. H. Withersell	98	98	196
E. L. Johnson	98	98	196
J. C. Smith	97	97	194

The great difficulty in comparing different performances at the trap is the diversity of the conditions under which they are made, and the lack of sufficient data for just consideration of their respective excellence. In this case, for instance, "En Garde" has neglected to give us any particulars as to the style of the traps used.

The recent match between the Gulf City and the New Orleans Gun Clubs, at pigeons, 13 men on each side, 10 birds each, 5 ground traps, 21 yards rise, Bogardus rules, resulted in a score of 100 to 98, and the shooters claimed the best score on record. To accord them this distinction, or to deny it to them, without a vast deal of trouble consulting both reports of matches, would it not be well for the gun and glass-ball shooters to conform their conditions to some standard? Let us hear from some of those interested.

N. B. A. N. H., Sept. 6th.—Glass-ball shooting. The contest for gold badge, to be given by the Captain of the club to the winner, began last Thursday, 3 scores, 10 balls each, 10 straight, 10 rotary and 10 double. Mr. Geo. H. Brigham, the winner in the last contest, being handicapped 6 balls, and Messrs. Dixey and Towne's bag, Charles Williams was the winner, getting 23 balls, Brigham 22, Dixey 20 and Towne 19. The one winning the badge three times to become the owner.

—Capt. Bogardus and W. B. Hauworth will shoot a match at St. Louis, Mo., on the 9th of October next on the following terms: 100 birds; pigeons on ground, from H. and E. plane traps, 21 yards rise, 80 yards bounds, Illinois State rules to govern, for \$100 a side. W. B. Hauworth lately shot with Erb, of St. Louis, two matches, beating him both times, with the remarkable scores of 91 and 98, out of a possible 100, at good wild pigeons.

## POINTS.

GULF CITY GUN CLUB.—Mobile, Sept. 8th.—The regular monthly shoot of the club for the medal was held yesterday afternoon at the club grounds. The following is the score:—

H. P. Vass	01	11	01	10	10	11	11	11	16
Frank P. Davis	10	10	11	01	10	10	10	11	10
E. C. Gough	11	11	11	11	11	11	11	11	17
T. S. Seales	10	10	11	10	11	11	11	11	16
Geo. W. Tunstall	11	11	11	11	11	11	11	11	19
Wm. H. Holt	11	10	11	11	11	11	11	11	17
W. T. Vass	10	11	11	11	11	11	11	11	16
Chas. L. Hugger	01	11	11	10	11	11	11	11	17
John F. Freina	11	10	01	01	11	11	11	11	17
Jas. S. Alexander, Jr.	01	11	11	11	11	11	11	11	18
R. H. Vaughan	00	11	01	11	11	11	11	11	15
L. C. Fry	10	11	11	11	11	11	11	11	19

Swencast Match—Five balls, 15 yards.  
T. Seales . . . 1 1 0 0 1—5  
G. W. Tunstall . . . 1 1 1 1 1—5  
H. P. Vass . . . 1 1 1 1 1—5  
J. C. Gough . . . 1 1 1 1 1—5  
T. S. Seales . . . 1 1 1 1 1—5  
L. C. Fry . . . 1 1 1 1 1—5  
Chas. L. Hugger . . . 0 0 1 0 1—2  
J. F. Freina . . . 1 0 1 1 1—5

In shooting off ties Tunstall and Vass divided first money, Cane second, Seales and McDonald divided third. The medal is shot for monthly, the member winning it the most times in a year to own the medal. S. C. ORR.

UNION CHURCH, Miss., Sept. 14th.—Match from a Card's rotary trap, 18 yards, Bogardus rules, 16 balls each:—  
D. A. Torrey . . . 13  
J. D. McAlain . . . 11  
A. M. Newman . . . 13  
J. S. Gillies . . . 11

FALCON GUN CLUB.—Dexter Park, Jamaica, L. I., Sept. 16th.—Regular monthly contest; N. Y. State Association rules, plunge traps and Falcon Gun Club handicap rise:—

Ortman	21 yards	1011111110-8
Vass	23 yards	000111110-6
Lager	25 yards	111111110-6
Miller	25 yards	111111111-7
J. Nicolas	25 yards	0111101101-7
J. S. Seales	21 yards	111111111-7
Doscher	21 yards	1111111001-8
Van Staden	23 yards	1110011111-8
Meyer	21 yards	111111111-8

Lager and Miller tie, 9 each, which was split as follows. Three birds each: Lager 3, Miller 3; second tie, Lager 2, Miller 2. Club badge and gun won by Miller.

time that his fondness for hunting has given you a little trouble at home before now. Let him have a good fling all by himself, to the end of the stream before he settles down to your signals by hand, which you must try to get your pupil to understand and depend on as much as possible, which you will soon see he will look for. Therefore, let no one be with you to take up his or your attention at any time: rather stop your work for the day. Presuming by this time he is off to the right, be in no hurry to blow your whistle, as very likely he would not mind if he is so full of work. Let him turn of himself, and when he does turn try to get him to cross you to the left. But very likely he will pay little attention until he has been down for a time: he will likely remember the thing for the first few days until he knows what is intended to be done, when he will settle down steadily to you, when you will have a chance of getting him to work to your signals. Of course, all the time he has been down you have been giving a signal, when you could, by a wave of the hand, to make him cross backwards and forwards in front of you. I often find by sticking too close to a pattern in quaterning at first, your dog will try to get behind you in crossing instead of thirty yards in front of you. This will make the breaker more than anything, as you never would make your dog come to heel altogether. Should he cross behind you once or twice, when he comes next run forward yourself, and he will run up to see what is up. This will encourage him likewise, and will do no harm. As this is one of the most essential points in dog breaking, great care must be taken with your pupil to quarter his ground thoroughly. It is only to be got by perseverance—keeping at the work every day—that real masterpiece work in this part of the training can be done. Should your pupil get too keen, and he is inclined to hunt for himself and not answer the call, drop him when he turns by hand; go up to him and hope you have a few feet of check-cord in your pocket. Attach this to his collar, then take your whistle and blow it, also rating him with the words, "Do you hear the call?" Repeat pulling the check cord, you yourself going after the back, and making him follow you. You must now watch him for perseverance—keeping at the perfect obedience to the whistle. Now he should be ready to go to the whistle, and you have many to break, or not much game to take, and take him old dog out with your young one, and let him get a point. I hope he is steady and stands in good style. Have your young one in your hand; go quietly up, treading lightly, and give him a whiff of the delightful aroma. He may be very impatient at first, but very likely he may stand at once. Some will, others will not, until several days. However, persevere until he does. I myself never take him in this part of the training plan. After you think you can depend on your pupil, drop him at home, and give him a chance for himself. Let no attendant or anything be near you to take off his attention, and I hope he may stand his first point well. Should he not do so, mark down the first brace of birds you can for him. Now put on your check-cord when not far from them. Then bring him round and get near the cord when he winds them; allow him to get well out from you so that he can think he is by himself. Should he be inclined to run in, give him a sharp jerk with the cord, and keep him there for a minute. Then walk gently up and put him in a steady him, and go up with him to his birds, and hope they will lie well to him. But do not keep him too long on his point at this time, as it is the first real one he has had to himself; two or three minutes will be quite enough. As soon as the birds rise, drop him at once, say for five minutes, walk round him, still keeping him down. Don't allow him to sit on his haunches. Never allow half measures. He should be able to know better; that is the great secret and success in breaking, combined with good temper and patience in the breaker. After you have him so that you can depend on him, take your old dog again, which I hope is a good backer, so that your young one may get a lesson, as nothing is more beautiful than a dog to back well, and some are very difficult to learn, others doing it naturally. If the old dog is a kennel companion, so much the better. The young one will not be so jealous, as in this time he will have great confidence in him. Let them be together, or if you like they can have a run separately to begin with, which will cool their heads before being down together. We now suppose they are both down; have a short cord on your young one, so that should be required, he can be pegged down. Should the old dog find first, get it possible betwixt him and the young one, and by any means stop him by holding up your hand and using the word "Yoho." Keep him by standing still. Advance yourself to the old dog, still keeping your eyes on him and your hand up. Should he advance, as he likely will, go up and put him to where he stood first and peg him down, or you may peg him down without the peg for the first few times, retreating with your face to him. I only hope the weather is fine, if spring and birds lying well, which will give you time for all this. Now spring your game, still keeping your young dog down; also the old dog for ten minutes if you like. Bid the old dog hold up till he looks where the birds have been, still keeping the young one down when he has seen the birds are no more left. Call up the young one and start again. Now let the breaker take care that the old dog does not get all the points, as this will soon discourage your young dog as making him perform all the backing. He will soon be going in the wake of the old dog, depending on him finding the game; only I hope your young one will prove, if not so sure in nose, fleet of foot, which will give him a chance of a point now and again. Or, supposing you have two young ones, you will have a better chance of them getting equal points. Be sure to cast off your hand, and let them to the left, each time you have them down, as by letting them this way they go away free of each other, and don't try to follow as I have often seen them let down together; and instead of who will find the birds which will run the fastest, and go right into the covey and chase them, all through jealousy and high spirit. Don't whip for this; only rate them, as you yourself was to blame for this, as they will only do so for the first turn or two. I once had a brace of lion and white setters I broke in 1871 that quartered their ground, and who the right, the other to the left, and each kept their own bay as they ran. It was my curiosity, and found it could be done easily. So much for patience and perseverance; always bearing in mind that there is a good understanding between you and your pupils by kindness if possible; and be with them at exercise and feeding time if you can, so that they get well attached to you. But when necessary to apply the whip,

let it be done firmly and don't flinch from your duty; it will save your pupil from many smaller and larger beatings afterwards. Some are always whip-whipping; that of itself would spoil a dog. This mostly applies to high-collared dogs, and many of the wilder type give the most trouble, and must be left a good deal to the discretion of the breaker. As for instance, many a shy dog that will scarcely stand a look of the whip at the kennel, will in the field, for an act of disobedience, take a fair share of it, and rather improve him of his shyness than otherwise, always bearing in mind never to leave him until peace is made up between you. It is also essential that you keep at them every day, as they are quick to learn and as soon forget when only half way with their master, and in the end you will find yourself, for they quickly discern right from wrong, and who is the master. Nothing to my mind is more beautiful than a brace of dogs who quarter their ground thoroughly. This is only done by perseverance and using the signals of waving the arm across you, but to hark back when you throw off your brace of young ones. When they get their point, get up to them as quickly as you can, and if not well up to backing by this time—or some will do so naturally—have an attendant, and let him go up to the dog who has the point, and go yourself to the one who has the other, and will require most attention from you at this time. Go behind him and steady him. Should he not get into stiff, good form, advance a step with him until he gets a whiff of the game. Then keep him there if possible in his position. Let the attendant spring the game with the other dog. Then drop them. After a few minutes, sign to the attendant to go on with the dog to see if any are left, you still keeping your dog down until he is satisfied there are none left. Repeat this until you are perfect. Another thing, do not depend too much for some time on either of them, but keep a strict watch on both, as until the second season very few young ones are to be depended on. Should you not have had the luck to let them see many hares, be careful now when one gets up, or you may have a deal of trouble. If you cannot depend on them, take the first chance when you see her to shout at the top of your voice, "Ware hare! ware hare!" and hope you are not far from them; but stop them by any means, or else you may have to go back again in your work, and only let the one dog down. This would be awkward, for if once they get a beginning with fur they are difficult to stop; only you must apply the whip properly now, as this is the worst vice he could have, and nip it in the bud. I have departed a little here, as it is very necessary to instill this most essential point on the breaker—as what chance would one have with a dog that would chase even a few yards at a field trial? although some of the judges are not altogether consistent there, as I have been kept out of the ring that only want a few yards, and the next brace chased out of the field and were not put out, although neither showed great merit to keep them in the hunt. Now I think the rules ought to be strict, and let every one have the same fair play for his money; and let it be binding that a chase of any sort be thrown out, as I think, now that so many are entering for field trials, we must look for higher standard of work, and therefore stricter rules. I shall now give a list of words used for quartering the dogs—"Go on." Hold up your arm to the right or to the left or left. "Lie down." "Down charge," or "Down." Holding up the hand on springing birds: "Have a care." "Ware springing birds." Leading him back to where he should have stood them, using the words "Soho! steady!" On fur "Ware hare!" at the same time drop him and take him off the line of her. By attending to these simple rules, the young breaker will, I have little doubt, have little trouble with perseverance in turning out a good puppy.

I have information contained in the above article is, we think, most valuable, and likely to be of service to beginners. As any special features in the education and breaking of various breeds will be attended to, in the articles referring to these varieties, we do not propose to add any further remarks on breaking to the present chapter.

PENNSYLVANIA FIELD TRIALS.—Pittsburg, Pa., Sept. 26th.—*Editor Forest and Stream*.—The following action of the Pennsylvania State Field Trials Association was had at the meeting of the association, held here on the 18th inst. Inasmuch as the date fixed on at a previous meeting seemed to conflict with the N. A. K. C. trials, it was unanimously resolved to change the Pennsylvania Trials to the 26th, 27th, 28th and 29th of October. The prizes in the various stakes are as follows:—  
All-Aged Stakes.—\$100 to the first, \$50 to the second, \$25 to the third; \$10 entry, \$5 forfeit; entries limited to 35 entries.  
Puppy Stakes.—\$50 to first, \$25 to second, \$15 to third; \$5 entry, \$3 forfeit; entries close with 25 entries.  
Nursery Stakes.—Same as Puppy.  
Association Stakes.—A piece of plate worth \$100, to be selected by the winner; entry, \$10; to be forfeited if not run.

All entries close Oct. 26th, or on receipt of the limited number of entries in the several stakes.  
J. P. STAYTON, Secretary.

[Unfortunately the above was received at too late an hour to be published in last week's issue.]

A LETTER FROM MR. JOHN E. ROBINSON ON LAYER-ACKS.—Glen Villa, Ashbrook Range, Sunderland, England, Sept. 1st.—*Editor Forest and Stream*.—I was very sorry indeed to learn the "sad and miserable" end of Pride of the Border. I have enjoyed many a pleasant day's shooting over him, and can indorse all you state about his good qualities as a field dog and also as a sire. I wish to inform you that "Fride" was not got by "old Blue Dash," but by "Fred II." which I am able to prove by the English Kennel Stud Book, and also by my old friend (E. Laverack) own hand writing; how it is that "Fride" is entered in America as by Old Dash, I know not, but I have told several gentlemen in America that it is a mistake. "Fred II." was by "Fred I" out of "Belle II." (see Stud Book 1372) and of course was as well bred as any setter in the world, and although a sterling good dog in the field, yet not near so good as "Fairy," and how it is that "Fairy" has been so often spoken of as a field dog, since she arrived on your side of the water is beyond my comprehension, unless it is that she was too fast for your sort of country; at any rate on the Scotch moors she could beat "Pride" hollow; the latter was more of a partridge dog,

not being able "to go the pace," nor could he last anything like the bitch, he being too heavy and carly, especially for his breed; however, he has maintained the reputation and value of pure bred setters, by the quality of his stock (out of pure bred bitches), and now that "Fride" has gone, I regret more than ever the loss of "Flambeau," which I sent to New York to take his place, and also that of "Pedigree." Had "Flambeau" lived, I believe he would have made the handsomest setter that ever crossed the Atlantic, and I would advise setter breeders that have pure Laverack bitches (especially blues), to breed them to "Aldershot." own brother to "Flambeau," being by my "Emperor Fred" out of Blue Cora (the late E. Laverack) by Blue Prince out of White Cora by Dash-Moll.

JOHN R. ROBINSON.

ST. LOUIS DOG SHOW.—Dr. J. S. Niven, of London, Canada, has consented to act as Judge on spaniels, hounds and non-sporting classes, at the Bench Show at St. Louis.

ROCKAWAY HUNT.—Meets for October, 1890. Each date at 4:30 P.M. Saturday, Oct. 2d, at Kennels. Saturday, Oct. 9th, at Lawrence Point. Saturday, Oct. 16th, at Valley Stream. Saturday, Oct. 23d, at Wave Crest. Saturday, Oct. 30th, at Rockville Center.

J. D. CHEREVER, M. F. H.

IMPORTED DOGS.—*Colorado Springs*, Oct. 21st.—*Editor Forest and Stream*.—I have recently imported from England a fifty pound bull terrier dog, also a wire-haired Scotch terrier bitch. I have also purchased from Mr. Owen Doyle, of Chicago, Ill., his famous bull terrier "Jack."

C. W. CHURCH.

MR. HERZBERG'S KENNEL.—A letter from Mr. Herzberg informs us that he intends passing some time away from home, and that he expects to devote much of his time this autumn in the field. Mr. Herzberg left Brooklyn last week, taking with him Aldershot, Patti and Polka. Boska will be sent to him about Oct. 1st, when she will have weaned her litter. Aldershot will not be in the public stud until the middle of December, and then only to approved bitches. We wish Mr. Herzberg the best of sport, he certainly has the tools for it.

FIXTURES.

Oct. 26th, 27th, 28th, and 29th. J. R. Stayton, Secretary, Pittsburg, Pa.

National American Kennel Club's Second Annual Field Trials, Vincennes, Ind., Nov. 13th. Chas. De Rongé, Secretary, 51 Broad street, New York.

Eastern Field Trials Club's Second Annual Trials, Robins Island, Peconic Bay, L. I., Nov. 23. Jacob Pentz, Secretary, New York.

KENNEL NOTES.

SALES.—*Daisy*.—Mr. A. H. Moore has sold to Mr. C. E. Lewis his liver and white cocker bitch *Daisy*. *Norma*.—Mr. A. H. Moore has sold to Mr. J. T. Goodsell his black, white and tan English setter bitch *Norma*, out of Nellie by Dan. *Betty*.—Mr. Chas. Downing has purchased from Mr. A. H. Moore his Irish setter bitch *Betty*, by Stoddard's Bob out of Bierbow's Kitty. *Mill*.—Mr. A. H. Moore has sold to Mr. John S. Cox's Gordon setter bitch *Mill* by Bruce out of Smith's *Daisy*. *Bob-Mona*, whelp.—Mr. A. H. Moore has sold to Mr. Robert Jack, Gordon setter puppy, by Bob out of Mona. *Bob-Mona*, whelp.—Mr. A. H. Moore has sold to Mr. E. P. Wilson, Gordon setter puppy, by Bob out of Mona. *Danah-Belle II*.—Mr. A. H. Moore has sold to Mr. Chas. Budd, pointer puppy, by Donald out of Belle II. *Bob-Mona*, whelp.—Mr. Oscar Wilson has purchased from Mr. A. H. Moore, Gordon setter puppy, by Bob out of Mona. *Daisy II*.—Mr. Robert Walker, of Frazer, Delaware County, N. Y., has purchased the cocker spaniel bitch *Daisy II*, from Mr. C. E. Lewis, of Suspension Bridge, N. Y. *Daisy II* is in whelp to Mr. Moore's imported champion, cocker Charlie, winner of ten first prizes. *Queen Bess* and *Lotta-Rory O'More*, whelps.—Rory O'More Kennel (W. N. Callender, Albany, N. Y.). The following pups, by champion Rory O'More out of Queen Bess and Lotta, one to Mr. C. Spahr, Bridgeville, Pa.; one to Mr. P. Gilsey, Good Ground, L. I.; one to Mr. M. L. Norton, of Greenbush, N. Y.; one to Mr. E. L. Seelye, of Stamford, N. Y.; one to Mr. J. B. S. Holmes, of Rome, O.; one to Mr. W. H. Pierce, of Peekskill, N. Y.; one to Mr. J. C. Vance, Chatacouga, Tenn.; one to Mr. E. L. Remlett, of New Orleans, La.; one to Mr. C. H. Dayton, of Peekskill, N. Y.; and one to Mr. David Norton, of Albany, N. Y. *Rena II.* and *Pep*.—Mr. R. F. Merditt has purchased from Dr. John H. Meyer his black pointer puppy *Rena II.* and from Mr. W. H. Beadle the imported prize pug bitch *Pep*.

IMPORTED CHAMPION BUILDINGS.—*Beacon Kennel*, Boston, Sept. 26th.—I have received, this date, from James William Berris, Esq., President Bulldog Club, London, England, two champion bulldogs, dog and bitch. To be slaughter, "they take the cake."

JOHN P. BARNARD, JR.

NAMES CLAIMED.—*Thorn*.—Mr. J. C. Bishop, Monton, Maine, claims the name of *Thorn* for English hare beagle bitch, whelped June 11th, 1880, out of Lucy by Victor, purchased from N. Elmore, Granby, Conn.

WHELPS.—*Delta*.—Mr. H. W. Livingston's black, white and ticked setter bitch *Delta*, whelped, August 15th, five puppies, four dogs and one bitch, by same owner's champion fair. *Fairy*.—Mr. Robert Sewell's red Irish setter bitch *Fairy*, whelped, at Tarrytown, N. Y., Sept. 18th, twelve puppies, four dogs and eight bitches, by owner's red dog Rex. *Peggie Royal*.—Mr. W. A. Coster's liver and white Billy pointer bitch *Peggie Royal*, whelped, on Sept. 22d, ten puppies, six dogs and four bitches, all liver and white and healthy and strong, by owner's Don Royal.

BRED.—*Fanny-Rufus II.*.—Houston Kennel Club (Texas) *Fanny*, to their Rufus II. *Rufus-Rufus*. *Kate II.*.—*Aldershot*.—Mr. E. A. Herzberg's imported black, white and tan English setter bitch *Kate II.* (own sister to L. Purcell's *Llewellyn's* *Dash II.*) to owner's imported Laverack *Aldershot*. *Lou-Mona*.—Mr. Robert Sewell's cocker spaniel Lou to Dr. Wyckoff's *Mona*, on Sept. 14th. *Rory O'More*.—Mr. Francis H. Moore's imported red Irish setter bitch to champion Rory O'More. *Lulu-Mona*.—Mr. Robert Sewell's orange and white imported cocker spaniel *Lulu* to Dr. Wyckoff's *Mona*, Sept. 12th, 1880. *Jessica-Dick*.—*Hatterack*.—Mr. E. J. Robin's red Irish setter bitch *Jessica* to Dirk *Hatterack*, Sept. 14th and 15th. *Bridget Plunket*.—Mr. E. J. Robin's *Bridget Plunket* to Dirk *Hatterack*.

### THE BEST ON RECORD.

BOSTON, Mass., Sept. 11th.—Owing to the disagreeable weather which prevailed to-day, and the absence of many riflemen at Framingham and Creedmoor, only a small attendance of long range men met to participate in the renewed competition at 800, 900 and 1,000 yards at Walnut Hill. The atmosphere was fairly clear, and a good gray light prevailed. The wind came from the southeast, indicating 4 to 6 o'clock, and in the early stages of the shooting gave no trouble. The spectators were numerous, and a few ladies graced the range in the afternoon. After the usual "bullseye" practice, Executive Officer Wilder assigned the men present to target No. 1, and promptly at 11 o'clock, Brown, Gerrish and Wilder faced the butts. At 800 yards the shooting was exceptionally brilliant, Mr. Gerrish making a full score of 75, and nearly all "center bulls." Brown was caught by the wind on his fifth shot, and saw the red disc appear, and closed for the splendid showing of 71. Mr. Wilder saw the "mag" on his thirteenth shot for poor holding and closed for 72. After lunch the shooting was resumed, and the ball opened at 900 yards, with the wind at 4 o'clock, steady and reliable, while the light had improved. All

champion of the world at long range. The *Globe* reporter was the official scorer. It has heretofore been conceded by riflemen that shells which have been filled for a long time were unreliable. The shells used by Gerrish were part of them filled before he went to England, last May. Subjoined is the summary:—

Wm. Gerrish.	800 yards.	55 55 55 55 55 55 55 55 55 55	221
J. F. Brown.	800 yards.	55 55 55 55 55 55 55 55 55 55	219
Salem Wilder.	800 yards.	55 55 55 55 55 55 55 55 55 55	211

In a letter speaking of his list, Mr. Gerrish says:—

"You have heard of my ammunition as being odd, and that it had been exposed to a great deal of transportation, having been carried by me to England and back. But that was not all. Part of the shells used were entirely new and had never been fired, and about one-half were old and had been used by me about two years and had become somewhat crimped by continued firing. I used the old shells at 800 yards and part way through the 900 yards distance, then I used new shells with an occasional old one for the remainder of the range. The old shells were loaded on the 9th of May last, my intention having been to take them with me to England, but I finally concluded to get all new, so these old cartridges were left at home. The new shells were loaded on the 13th of May with No. 5 Creedmoor, as were the others, but from different kegs, bought at different times, and all through the score I could not detect any difference in elevation that might not arise from my holding or from the strength of the wind, which occasionally got to the rear. The light was good, but a little misty, though I could see distinctly, but Mr. Brown, who shot with me, said the light was not as good for him as that of the week previous, when he made 221 and I 216. I used the Winchester bullet 1-11 with thick patch, 550 grains. I really made 49 consecutive bullseyes, having shot 3 bulls in pool previous to beginning the score, and also shot 5 consecutive bulls after finishing my score, making 52 bulls in 53 shots.

My rifle is one I have had two years, and have used it continually during that time. It is chambered for a 24-10 shell, in which I use 105grs. of No. 5 Creedmoor powder, of Laflin & Rand manufacture, over which I put a pasteboard cut, from the cases that contain the bullets, of which I inclose a sample. The bullet is seated in the shell about 1-10 of an inch, but hardly as much in a new shell. My rifle has been rusted several times, and the roughness is plainly visible near the breech, but I am satisfied that it does not affect the shooting of the gun, but there is probably a point of rustiness that would. I have a strong suspicion that the bullets have very much to do with the shooting of a rifle, and much of the complaints against rifles is either due to the shooter or the bullets. Many of my friends lend their shells so that the wind is fresh with the end of the shell, and think that they get better results. I have tried both ways, and can see no difference. It may make a difference in a rifle not chambered exactly like mine. I think I have a very fine rifle; and all of us, who bought of the lot made in 1878, found that our old shells were interchangeable, which shows a most perfect chambering. Sumner, Jackson, Brown and myself had them at the same time, and we have made 220 and over—Sumner twice, and myself twice. If you should wish to know of any other matters that I have not mentioned, I should be pleased to furnish the information. I sent you my score last evening; am sorry I could not give two leaves as it was, it took the best blank leaf in my score book. (I mail, also, an enlarged diagram with numbers of shot.)

WM. GERRISH.  
The following transcript from the score book of Mr. Gerrish, kept during the match, will explain the work of the day, in connection with the target diagrams, better than much text:—

### RANGE AND GALLERY.

found the inside of the carton ring on their first shots; on the second shot, Mr. Wilder was beaten by "Boreas." At this stage of the shooting the wind changed for the first time from the old quarter and became quite erratic and hard to manage. Brown got a drop for a center, after making 17 bullseyes. Again, on his fifth shot, he got a close center at perfect elevation, with no change in his windage. At this time elevations were watched sharply as the light became brighter. Gerrish was holding as firm as a rock, and shooting elegantly, sending his leaden bullets constantly into the very center of the iris, and closing for another full score of 75, which made his total at this distance 30 consecutive bullseyes. At the 1,000 yards point the excitement began. The wind again changed a few points, and the atmosphere became unpleasant, owing to the smoke hanging like a pall over the firing points and between the targets. Gerrish, with his strong nerve and cool head, was recorded bullseye after bullseye, and after making 43 consecutive bullseyes, with every indication of a full score at this distance, he got a center at 12 o'clock, and broke for the first time since he opened at 800 yards, having made the largest number of bullseyes on record. All eyes were upon Gerrish as he faced the butts for his last shot. It was indeed a trying feature, but again his coolness was visible, and he sent his last bullet into the center of the bullseye, and was recorded 21 of the possible 225, winning \$150 in gold, offered by the Sharps Rifle Company for beating the record of J. S. Sumner and J. F. Brown, 21, which heretofore has been the highest in a regular match. After cheer after cheer went up for this brilliant achievement, and the waving of handkerchiefs by the ladies, a fitting acknowledgment to the

Boston, Mass., Sept. 12th.—The long-range match at Walnut Hill to-day received a large number of entries. The wind proved troublesome, blowing from north to northeast, but notwithstanding this, most brilliant records were secured. Mr. Brown making the highest score ever recorded. This score has been held but three times, by Messrs. Sumner and Gerrish, but as Brown's record at 1,000 yards is the best of the three, he is en-

titled to the credit of the best score at long range. The best scores of yesterday are appended:—

J. F. Brown.	800 yards.	55 55 55 55 55 55 55 55 55 55	221
Wm. Gerrish.	800 yards.	55 55 55 55 55 55 55 55 55 55	219
W. Charles.	800 yards.	55 55 55 55 55 55 55 55 55 55	215
J. S. Sumner.	800 yards.	55 55 55 55 55 55 55 55 55 55	212

Salem Wilder made a total of 208, S. Lewis 207, S. Henry 205, D. Webster 203, O. H. Thomas 203, T. Howe 137.

BOSTON, Mass., Sept. 25th.—The beautiful September day, which greeted the riflemen to-day at Walnut Hill, was all that could be desired. There was not a cloud, and the wind was easily controlled. The Creedmoor target match had a very large number of entries, and magnificent results were achieved. At this distance, 200 yards, Messrs. E. F. Richardson and O. M. Jewell did some splendid work before the butts, each piling up the elegant score of 40 each out of the possible 50. Mr. Richardson took first position, outranking Mr. Jewell. Capt. Jackson, who did his first shooting at this distance since his return from abroad, followed the gentlemen closely for a good 47.

In the Massachusetts target match splendid work was done, Mr. Richardson again coming to the front as high man, making the elegant record of 110 out of a possible 120. Six bullseyes inside of a 4-inch ring at 200 yards out of 10 shots is very hard to beat:

CREEDMOOR TARGET MATCH.

BOSTON, Mass.—The fall meeting of the Massachusetts Rifle Association will be held on Oct. 11th, 15th and 16th, at Walnut Hill, when the following prizes will be offered: Long range team match (45 shots at usual range), first prize, the "Walnut Hill cup," value \$200; second, a cash prize. Short range team match, 10 shots at 200 yards. Nine hundred yards carton match, 7 shots, prizes to the amount of \$175. Two hundred yards match "Creedmoor target," prizes to the value of \$175. Two hundred yards match (Massachusetts target), prizes to the amount of \$100. Total value of prizes, \$550. The date of this meeting is subjected to change.

The Medford Amateur Rifle Association will hold their fall meeting at Bellevue range, Medford, Oct. 6th and 7th. Valuable prizes are offered, and a large attendance is anticipated.

BOSTON, Sept. 27th.—The Mammoth Gallery, which reopened on the 15th, has had a large number of the crack shots of this vicinity practicing daily, and very fine shooting has been shown, as the scores show:—

E. F. Richardson.	4	5	5	5	5	5	5	5	5
W. A. Pollard.	4	5	5	5	5	5	5	5	5
George D. Edson.	4	5	5	5	5	5	5	5	5

Oct. 1st will begin the monthly prize shooting, and the first match to dedicate the gallery will be called the Inaugural Rifle Match, with 4 cash prizes and an extra prize of \$10 to anyone making a clean score of 5 consecutive bullseyes. The conditions of the match are: Any 22 caliber rifle, 3 pounds pull, rounds 4, possible 40, 5 scores to win, or possible 200, the match to close on the evening of Oct. 30th.

MEYFORD, Mass., Sept. 15th.—The attendance at Bellevue range to-day was very good, the occasion being the renewal of the Bunker Hill and gold badge matches. There were 49 entries. The best scores in the Bunker Hill match (Creedmoor) were:—

H. Kimball.	6	6	6	6	6	6	6	6	6
D. Kirkwood.	5	5	5	5	5	5	5	5	5
C. H. Russell.	5	5	5	5	5	5	5	5	5
C. D. Harrison.	5	5	5	5	5	5	5	5	5
H. Whittington.	5	5	5	5	5	5	5	5	5
A. W. Webb.	4	5	5	5	5	5	5	5	5
N. P. Ames.	3	5	5	5	5	5	5	5	5
K. Abbott.	4	5	5	5	5	5	5	5	5

The leading scores in the gold badge match were as follows:—

J. Edwards.	4	5	5	5	5	5	5	5	5
C. D. Harrison.	4	5	5	5	5	5	5	5	5
C. H. Russell.	4	5	5	5	5	5	5	5	5
F. E. Garden.	4	5	5	5	5	5	5	5	5
A. C. Gould.	4	5	5	5	5	5	5	5	5
E. Whittier.	4	5	5	5	5	5	5	5	5

The winners of the general prizes in the Bunker Hill match were C. H. Russell and D. Kirkwood in the first class, and H. Whittington and A. W. Webb in the second class.

WORCESTER, Mass., Sept. 18th.—The Shrewsbury Rifle Club voted to accept all rules and regulations of the Massachusetts Rifle Association. While objecting to the use of elbow or body rest in off-hand shooting, it was voted to accept the same, so long as sanctioned by the Association, but that all scores made from the elbow and body rest should be so designated when published.

We hope to see the same abolished both at Creedmoor and Walnut Hill. It is fast driving out of the field, as competitors, all off-hand shots who do not desire to make contortions of themselves. Others are obliged, by necessity, to adopt an unnatural position in order to stand any chance whatever—a few exceptions, of course. It is conceded by those who use both positions that three points advantage is given by allowing the elbow or body rest. Hoping to learn soon that the use of the rest has been abolished both by the National and Massachusetts associations, I remain, very truly yours, S. C.

UNION HILL, N. J., Sept. 21st.—The United Schuetzen Cadets School, Pres. H. Reschen, celebrated their fourth anniversary with prize shooting, exhibition drill, maneuver and grand parade at the Schuetzen Park. The little fellows assembled in their blue uniform at their headquarters, 80 Hudson street, Hoboken, in the morning at 8 o'clock and started, accompanied by delegations of several other clubs, at 9 o'clock to the range, which was reached through several streets of Hoboken. In the afternoon the park was crowded by the parents and friends of the cadets which came to see the maneuver and the parade, and were greatly surprised by the excellent tactics shown. At the shooting, 150 feet

changed to expressions of disgust. There is really nothing absolute in any in seeing very bad cricket. It falls on one in time. As a chronicler of the noble game, we have long known one fact, that as long as a reporter deals out his fairly liberally he is a "jolly good fellow," but when he begins to crowd the mourners, his lot is not a happy one. In despite, however, the impending fate of being obliged to watch the remaining games of the season from a neighboring house-top, or for the future hold only a speaking acquaintance with the gentlemen who miss the most catches, we propose, like truthful James, to "rise to explain." There never was, in New York, since the days when cricket was first introduced over a hundred years ago, a club founded under more happy auspices than the Staten Island. Its ground, the most picturesque in the country, soon attracted the players of the Metropolitans, and its members' list increased in goodly numbers until it far exceeded the total membership of all the other organizations combined. For once we trusted that cricket was firmly established, and that the club's management would be such that New York would push to the front and be able to hold its own in time. In the early days the Island organization played a plucky up hill number of seasons with varied success. Beaten badly at first, in time began to hold its own, and then to win. This success has proved almost fatal to the club's once good name. Not content with playing one game fairly well, other games were introduced upon the ground, and now it is not a success at any. Cricket, beyond all other outdoor sports, requires the most practice, and it is one man's work to play the game intelligently and well. Now for the game.

Staten Island won the choice and took the innings. The total result was one short of three figures. Kessler batted freely for 23, made up of four 3's, six 2's and singles. Donald played well for 16, a square leg hit for 8 over the fence included, and Patterson pretty for 11; he has the Cambridge poke down line, but it don't work on the off stump. Souther, with the ball, covered himself with glory, and the fielding was good. St. Georges made 155. Giles played a very fine defensive innings of 36, the top score of the match. It was obtained by good all-round cricket, and noticeably some excellent clean cutting. One 5, four 3's, and nine 2's and singles made up the score. Souther's 45 was fluky at the start, and there were several left-ers; but toward the end he warmed up, and rattled away more with fine hard hitting and good forward play. Moeran and H. Moore 11 each, the former over the fence at square-leg for 6. We have already remarked on the fielding. Kessler at the wicket was out of place, and the Cambridge expert no better than the rest. This innings decided the match, the home club winning by 56 runs. Staten Island had a second try, and secured 103 for the loss of three wickets, Lane's 46, not out, being very well obtained without a chance one over the fence to leg, and Kessler's 23, and J. H. Moore's 16 showing form. The bowling was decidedly bad and the fielding careless; as it always becomes when the result has been achieved. Score—

## ASSOCIATION MATCH.

## ENGLISH VS. AMERICANS.

HEADQUARTERS CRICKETERS' ASSOCIATION OF U.S.,  
143 Walnut street.

PHILADELPHIA, Sept. 22d, 1890.

The Executive Committee have decided to make the Association match, to be played at Philadelphia, Oct. 6th and 7th, a match between English and American players, whether amateur or professional, resident in the United States.

Secretaries of clubs in the Association will please forward, without fail, before Sept. 29th, the names of their players who desire to take part in this match.

The actual traveling expenses of players coming to Philadelphia will be defrayed out of the proceeds of the match.

JOHN P. GREEN, Secretary.

## ENGLISH VS. AMERICANS.

The above notice recalls the stirring matches of bygone days, when our English and American players contended for the championship. The Americans have improved so much in the last fifteen years that it was difficult for a time to get together an English team that could fairly be considered their match; but with the accession of such excellent professional players as Bromhead, of the Germantown; Lane, of Staten Island; Norley, of the Manhattan; Giles, of the St. Georges; Oldham, of Baltimore; Brewster, of Newark; Smith, of Detroit; Brathwaite, of

the Merion; and Smithson, of the Belmont; Brooks, of the Glard. Tyros, of the Chesnut Hill, and the strong English amateur players in these organizations, including Patterson, Kessler and Harvey, of the Staten Island; Cross and Moore, of St. Georges; Greig, of Manhattan; Pearson, Webster and the brothers Hargrave, of the Glard; and three or four fine players in the Peninsula Club—our American players will have their hands full.

MERION VS. YOUNG AMERICA.—Played at Ardmore, and resulted in the defeat of the Young Americans by 81 runs. A wonderfully well-played match, with superb fielding on both sides. Lowry's bowling beat the crack bats of the visiting teams Score—

ENGLAND VS. AUSTRALIA.—Played on the Oval, London, Sept. 6th, 7th and 8th, and resulted in a victory for England by 6 wickets. In our next issue we will give the detailed account of this match taken from the London Field. It was beyond question the most wonderfully interesting match ever played, and was witnessed by the largest crowd ever present on a cricket field. Score—

FOREST AND STREAM GENERAL PASSENGER DEPARTMENT.—Chicago, Ill., Sept. 25th.—The following persons have gone to hunting and fishing grounds this week: Geo. H. Richards and Geo. F. Gardner, of Boston, Mass., to Nevada, Iowa.  
B. C. Cook and friend, of Boston, Mass., to Toledo, Iowa.  
C. L. Gardiner, of Honesdale, Pa., and J. H. Terwilliger, of Hancock, N. Y., to Princeton, Wis.  
Adam Jackson, of Arabia, N. Y., and Alexander Rose, of Franklin, N. Y., to Mapleton, Iowa.

W. H. STRENN, G. P. A., Chicago and Northwestern Railway.

Dr. N. B. Wygant, of Peckskill, N. Y., is at the West among the chickens. We are promised reports of the excursion.

Mr. James G. Wallace, of New York, has gone hunting in the Adirondack Mountains.

\* \* \* THE FOREST AND STREAM respectfully requests of its readers to add to this weekly list of sportsmen tourists.

## THE ANTHRACITE AGAIN.

Editor Forest and Stream:—Believing that you desire nothing more than the dissemination of truth, let me protest in the name of common sense against giving further currency to the vulgar impression concerning the economy of the Perkins boiler as exemplified by the steamer Anthracite. The statement that she consumes one pound of coal per horse power per hour is, in plain English, a deliberate falsehood, for which the public here will hold the accredited agent of the Perkins boiler responsible, as he has materially assisted in giving color to the impression. It is not to be denied that we must know to be without foundation in fact. It is to be regretted that so influential a journal as the Herald unwittingly gives additional credence to the falsehood in its last Sunday's issue, as it may be the cause of serious loss to the dupes who may be prevailed upon to invest money in the Perkins boilers on the strength of the silly views of a daily journal which is not distinguished by direct and inverse proportion, and which regards the question of strength in a pipe boiler as paramount to the question of economy. It is with pleasure that I read the independent course pursued by your journal, and I know that its influence has kept at least one person from adopting the Perkins boiler in a steam yacht he is about to build.  
Boston, Sept. 21st.

Our correspondent is assured that this journal will continue to expose the Perkins boiler and engine as a piece of engineering quackery. We pronounce the assertion that the Anthracite consumes only one pound of coal per horse power per hour an unqualified falsehood, and like our correspondent hold Major Geo. Deane, the Secretary of the Perkins Engine Co., now at New York in the hopes of selling rights to American builders, at least indirectly responsible for the currency the falsehood has gained. The facts concerning the Perkins boiler and engine are these: The system has been in the market for many years, has failed to receive popular approval; in England, was thrown out of all vessels that have tried it, except the Anthracite, borrowed for advertising purposes from her real owner; the boiler is costly, the engine complicated, and last, but not least, the boiler is not, in marine practice, any more economical than the common high pressure cylindrical boilers in use at present. So little faith have the Perkins people in their own work that through ten long years they have refused to have a thorough trial made of the system. Let Maj. Deane undertake to answer these plain statements if he can, or, since he is not conversant with engineering matters, let him produce any official reports proving the contrary, and no journal will be more ready to do him and his cause justice than this. If he cannot do this, then we refuse to fall into line with the common herd, and cannot claim praise for something which does not possess the virtues claimed, and we deem it our particular duty to warn yachtsmen, of whose interests we have special charge, against accepting an imposition because it appears plausible, though it has no better foundation than the sensational clap-trap of the penny-a-liner of the daily press. For the benefit of Maj. Deane we may add that a certain portion of his journalistic enburge does him very little credit, either as an expert or as a man, and that in the interests of his company a closer scrutiny of his overzealous supporters will serve to keep the company clear of the charge of bad associations.

## SUNBEAM—GEM.

Editor Forest and Stream:—The long talk of match between the deep water boats Gem and Sunbeam took place off the Graves Friday, the 17th inst. By mutual agreement a match was arranged to take place as above for \$50 a side. The courses to be either from the Fog Horn of the Great Inland Sea around the Half Way Buoy to the Red Bank, Ledge Buoy and return, the distance being for No. 1 course 18 nautical miles, and for No. 2, about 16 miles. Friday morning was a beautiful and pleasant day, with every sign of a fair breeze for the day, but as the sun got high the wind began to flag, so by 10 A.M. a very light air was blowing from the west-southwest. Measured time was only 12.15. At 12.15 the judges notified each skipper that the course would be round Half Way Rock, leaving it on port, and back to Judges' boat, passing between it and the fog horn, and then back to the start. It was decided to go last. After giving ample time for preparation the gun was fired for the start. The Gem had got well to windward by the time the now famous Sunbeam was under way. The Gem and her sails full of the freshening breeze. The Sunbeam started 9m. and 38s. later with almost a calm, the wind had shifted to south-east and the Sunbeam was under way. The Gem, which seemed covered with canvas moved very sluggishly through the water, quite in contrast with the former boat. The wind veered very high on the passage to the Rock, so that seemed dubious to the judges of their finishing by daylight, but as there were no time restrictions they had determined to see the end if we had to stay all night. After the yacht had rounded Half Way Rock the wind freshened again and a better prospect came in view. The position of the boats had not materially changed, and we got hardly tell whether the Sunbeam had got nearer or not by the glass, yet it looked so. As the boats neared the starting place they showed their splendid hulls. Capt. Mill Woods, of the Gem had on a dark blue suit, and the Sunbeam had a blue sail and topsail were dragged aft until they set like boards. The Gem had been painted from garboard to sheerplank with asphaltum varnish, and the sheers and the hull were painted with a very striking contrast to the Sunbeam, a veritable black Gem indeed. On she came to windward and a picture of trim and neatness. At 8.41 p.m. she came to the mark, apparently having won the race. She was in her favor were severely let alone. The Sunbeam looked bad in the smoky atmosphere, but distance is deceptive on the water, and the Sunbeam was not far from the Gem. In 59s. allowance for difference in size for an 18 miles race to be added, thus giving her 11m. and 23s. to do her best to keep the pace for her. The Gem was watching. Her own white sails and whiter hull made her look more like a huge bird than a boat, and she seemed to fly instead of to move. The Sunbeam was not so fast, and it seemed to anyone could hear the rush of water along the side of the Sunbeam an eighth of a mile away. Minutes faded, still she neared the finish, and the Sunbeam was not far from the Gem. At 8.48 p.m. she came to the mark. The judges were, John Lincoln for Gem, W. S. Nickerson for Sunbeam. Geo. A. Palmer referee and stakeholder. This match was the first of the season, and although since she has been launched, and this is her seventh racing season.  
Boston, Sept. 18th. KEDGE

## THE CUTTER RIG GAINING.

WE regret being unable to publish a letter from a prominent yacht owner in the East, in deference to his own request, or some very sound remarks made by our correspondent on the subject of the doubt as to the modified cutter as exhibited in the recent plucky match of the Eastern Y. C. during a north-easter in Massachusetts Bay. The letter was written in favor of abolishing the clumsy river job and substituting something that can be worked at sea without resorting to the use of the anchor, and although the weather was severe on the flat floor and the nature of the rig while the wise ones who had a brown thier about it lack duty

to be quiet you will find a few such lessons will be all that are needed.

I. S., Reading, Pa.—I have a Ballard rifle, and in order to give it a finer appearance I thought of having the whole breech-block nickel plated. By so doing do you think it would make a strong reflection, or dazzle the eyesight so as to interfere with the shooting? I see many revolvers done up in this way, and they make a very fine appearance. Ans. The rifle would look gaudy enough with the side-plates and trigger-guard plated. Beyond that any plating would be a positive injury.

S. L. A., Boston, Mass.—My Gordon setter bitch has been paralyzed—the cause, distemper. She is now just getting the use of her hind legs. Would you give her a tonic, or is good food for her best? She has recently passed some worms. Will it do to physic her now, or had I better wait? She has a good appetite, and I am feeding her on milk, bread, corn meal and meat, cooked together. Ans. Give your bitch two grains of quinine and one-eighth grain of nuxvomica three times a day. We would also suggest administering two doses of calomel, five grains each, eight or ten hours apart, followed by a tablespoonful of castor oil. Avoid feeding the milk.

R. E. E., Buffalo.—My cocker spaniel had a slight touch of the distemper about six months ago, and I gave him the preparation as you directed, and he seemed to be perfectly well, but since then I have noticed that he is partially blind, and when I throw anything for him he loses sight of it and will sometimes go within three feet of it without seeing it, but if he gets the scent of where it struck he will find it right off. I think that it is the effect of the distemper. If I am right will you please advise me what to do. The blindness, of course, is the result of distemper. Time and constant attention to the dog's general health may bring him about all right. Give two grains of quinine three times a day.

C. F. S., Rome, N. Y.—Where can I get reliable information concerning mackerel fishing, say for a summer's cruise? Ans. The form of question hardly gives us an idea of your wants, but mackerel fishing is more or less good at times in Long Island Sound and up to Maine. The spring and summer runs are often numerous, but are seldom fat. The best fish are caught in October. It is impossible to give more exact information concerning a migratory fish which comes in immense numbers at irregular times and at others is scarcely seen. By inquiring at the different ports on the sound, of the fishermen as you go, you can learn of their probable whereabouts, numbers, etc.

D. A. W., Fort Wayne, Ind.—During a recent trip through Colorado and adjacent territories I heard, from the sportsmen and travelers, considerable regarding the mountain lion, its great size and ferocity, etc. I am unable to decide to my own satisfaction where the vermin belongs. Is it not like the vegetables of California, an overgrown species of the American jaguar or panther, the "Felis onca of Linnaeus?" Ans. The size and ferocity of the mountain lion is often exaggerated, but at the same time it is not a placid animal to have to do with at close quarters. In different sections it is called variously panther, puma, cougar, mountain lion, and by naturalists *Felis concolor*. A large cougar stands as high as a large dog and weighs about 150 pounds.

J. Rhinebeck, N. Y.—Will you kindly decide this wager and oblige an old reader of your valuable journal. A, B and C go ruffed grouse shooting, one afternoon. A wagers C that he will kill a brace of birds. A and B make a party shot and kill a grouse. A and B shoot together again and kill a second grouse. A shoots alone at another grouse and kills it. Does A win his bet to kill two birds. Ans. If A can prove that in the party shots his shot killed the bird and B did not, he can claim the wager. But if you were C, we should make him prove this before paying. Perhaps the only way to satisfy both parties would be to dismiss the case and adjudge that B pay all costs.

H. P., Providence.—Will you kindly inform me in which of the two routes I would find the best fishing and shooting; first, Connecticut lakes, reached by way of Meridenway River, Farmington Lake, etc.; or, second, leaving Mattawamkeag, on the east branch of the Penobscot, Milneton Lake, Mansungun Stream to Mansungun lakes, Churchill Lake, Eagle, Chamberlain, Mud

Pond, to Chesuncook Lake, west branch of Penobscot, Farmington Lake and Penobscot River to Mattawamkeag? To whom shall I write for extended information of the two routes as to guides, boats, etc.? Ans. We would prefer the latter. See "The Eagle and other lakes of Maine," FOREST AND STREAM Aug. 28th, 1889, page 65.

CHIHUAHUA.—My setter bitch, eight months old, had the distemper about one month since, but is over it now with the exception of a weakness in the hind parts, i. e., a kind of staggering when she gets up or stops. When running you cannot notice it, but the moment she attempts to walk slow she will stagger or lean up against whatever is nearest to her; in every other respect she is in splendid health and seems to be as lively as if she had never had any trouble. She had three fits ten days or two weeks since, but since of course it relieved her at once. Has not been troubled since with fits; now cold and damp, eyes clear, feed with boiled meat, vegetables and table scraps; boiled twice a week. What will cure the above disease? Ans. This is one of the evils oftentimes resulting from serious attacks of distemper. Give one eighth grain nuxvomica and two grains of quinine three times a day.

G. P. M., Oswego, N. Y.—I have a fine blooded pointer dog, two years old last February. He is a perfect beauty, good hunter, very intelligent and all right with one exception. When he was about nine months old I took him out for partridge, and not being able to start any, on my way back I shot a crow. My puppy went out and brought the crow to me with all the pomp and pride of an old retriever. I was out of patience with my dog because it was not a game bird, and I punished him severely. The consequence is he has not brought me a bird since, and I fear he never will. What can I do? Ans. As you do not state whether you have tried him on crow again, it is impossible to answer your query as fully as it deserves. In all probability your dog has been ruined for life as a good retriever by your own indiscretion. We have known a number of dogs ruined in this way. If you are kind and firm, however, and will use patience, he may be redeemed by the careful use of a collar and check-cord, remembering to give your daily lessons before feeding and rewarding with gifts of food each step toward the desired result.

B., Newburg, N. Y.—Can Scotch staghounds be used to advantage in hunting deer in this country? If so, are they as good as our ordinary deerhounds? Is there a breeder in this country from whom I could get one? Ans. The Scotch staghound, as ordinarily trained, follows the deer by view alone, and would therefore be of no use in hunting in this country except on the plains, where the quarry can be kept in sight. They would, moreover, be too fast for ordinary deer-driving, in which it is essential that the hounds should keep close to the deer, or that the latter shall be very much frightened. Stonehenge, it is true, considers that the staghound or rough greyhound, for we presume that it is of this animal that our correspondent writes, possesses nose enough to follow even a cold track. These dogs have been extensively used in both deer and antelope hunting in the West, but have not proved so useful in this sport as have the smooth greyhounds, which have more speed, though perhaps not so much strength. The old English staghound was essentially a larger foxhound, in respect to his head, and had the body like a bloodhound, but somewhat lighter. The English staghounds of the present day are merely a larger and lighter draft of the ordinary foxhound. Staghounds are frequently advertised in our columns, and our correspondent can no doubt obtain one either by advertising or watching our advertisers' cards.

C. W. T., Oakland, Md.—Will you please be kind enough to inform me of the receipt for blueing or blacking rifle barrels; also method of application. Ans. Tincture of muriate of iron, one ounce; nitric ether, one ounce; sulphate of copper, four scruples; rain water, one pint. First plug up both ends of the barrel, leaving one plug in each of sufficient length to be used as handles; then thoroughly clean with soap and water, and when that has become dry remove it with an iron wire scratch brush; this is to remove all dirt and grease from the barrels.

Then apply a coat of the fluid with a rag, and let it stand twenty-four hours, when a slight rust will have appeared; then take the barrels and immerse them in a trough containing boiling water, after which scratch them well with the scratch brush. Repeat this until the color suits, which will be after three or four applications. When completed, let the barrels remain in lime water a short time to neutralize any acid which may have penetrated. Take great care not to handle the barrels during the operation for the least particle of grease will make bad spots.

CLIFF.—I have a setter pup, four months old, that is troubled with worms and very much weakened from confined dysentery. Does not digest his food and his discharges are of a mucous, bloody and purulent character. I have given him a tablespoonful of castor oil with ten drops of turpentine to relieve internal pain that caused him to howl incessantly and drag about on the ground. The dose relieved him before morning. That was some two weeks since. I have given him, within the last five days, two small doses of vermifuge, but as he is very much weakened by diarrhoea am afraid to give him any more. To-day I gave him two grains of calomel, and intend after this, if necessary, to give him bismuth and chalk. Can you recommend any treatment better than this, or give me some idea of his disease and how to cure him? I am a practical hunter, have raised and broken many dogs, but have never had such trouble to raise a puppy before. Ans. Should the diarrhoea continue give injections of one-half teaspoonful laudanum in tablespoonful of starch water. We would advise you to discontinue all purgative medicines and for the present to leave the vermifuges alone. Give two grains of quinine three times a day, and continue for several weeks, then write result.

## FOREST AND STREAM,

A WEEKLY JOURNAL,

DEVOTED TO SHOOTING, THE KENNEL, THE RIFLE, ANGLING AND OTHER FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUTDOOR RECREATION AND STUDY.

## TO SPORTSMEN:

## The Pennsylvania R. R. Co.,

Respectfully invite attention to the  
**SUPERIOR FACILITIES**

afforded by their lines for reaching most of the  
TROUTING PARKS and RACE COURSES in the  
Middle States. These lines being CONVENIENT  
FROM ALL IMPORTANT PORTS, avoid the diffi-  
culties and dangers of rougher travel, while the ex-  
cellent cars which run over the smooth steel  
tracks enable SPORTSMEN TO BE TRANSPORTED  
without failure or injury.

THE LINES OF

Pennsylvania Railroad Company

also reach the best localities for

## GUNNING AND FISHING

In Pennsylvania and New Jersey. EXCURSION  
TICKETS are sold at the offices of the Company in  
all the principal cities to KANE, KENNY, A. BED-  
FORD, CHESTER, HAZLETON, MINNICO, and  
other well-known centers for

Trout Fishing, Wing Shooting, and Still  
Hunting.

150, 70

TUCKERSON, BEACH HAVEN, CAPE MAY,  
BOUAN, and points on the NEW JERSEY COAST  
renowned for SALTY WATER SPORT AFTER  
FIN AND FEATHERS.

L. P. FARMER, Gen'l. Pass. Agent.  
FRANK THOMPSON, Gen'l. Manager. 1507-12

## Old Dominion Line.

THE STEAMERS of this Line reach  
some of the finest waterfowl and upland  
shooting sections in the country. Connecting di-  
rect for Chincoteague, Cobb's Island, and points  
on the Peninsula. City Point, James River, Cur-  
rituck, Florida and the mountainous country of  
Virginia, Tennessee, etc. Norfolk steamers sail  
Tuesday, Thursday, and Saturday. Lewes, Del.  
Monday, Wednesday and Friday, at 3 P.M. Full  
information given at office, 157 Greenwich St., N.Y.

To Hunting and Fishing Parties.

## The Pullman Car Company

IS PREPARED TO CHARTER THE  
new cars "Day Grouper" and "Leak Walton",  
which are fitted up with dining room and kitchen,  
sleeping apartments, lavatories, etc., also pro-  
vided with racks and closets for guns and fishing  
tackle, and kennels for dogs.  
Diagrams, rates and other desired information  
furnished on application to Gen'l. Sup't. P. C.  
Co., Chicago. 1528 8mcs.

## Hotels and Boutes for Sportsmen.

SPORTSMEN will find good accommoda-  
tions, guides, dogs, etc.; deer, partridge,  
woodcock, pigeons, ducks, rabbits and squirrels  
in fair numbers. Address ISAAC M. BRADLEY,  
Elkred, Sullivan county, N. Y. References given

## "THE FISHING LINE."

TAKE THE  
Grand Rapids & Indiana R.R.

Meekins, Grand Rapids and Cincinnati Short Line.

Front, Grayling, and Black Bass Fisheries.

FAMOUS SUMMER RESORTS AND LAKES

OF

## NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed,  
if equaled in the abundance and great variety of  
fish contained.

BROOK TROUT abound in the streams, and  
the famous AMERICAN GRAYLING is found  
only in those waters.

The TROUT season begins May and ends Sept.  
The GRAYLING season opens June 1 and ends  
Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUS-  
KELONG also abound in large numbers in the  
many lakes and lakelets of this territory.

The sportsman can readily send trophies of his  
trip to his friends or "club" at home, and pack-  
ing fish can be had with any point.

THE TOURIST CAN EASILY VISIT THE. The scenery  
of the North Woods and Lakes is every where  
beautiful; the air is pure, dry and bracing. The climate  
is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far ex-  
ceeding the average in countries new enough to  
afford the finest of fishing.

During the season Round Trip Excursion Tick-  
ets will be sold at low rates, and attractive trans-  
port facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free  
of sportsman's risk.

It is our aim to make sportsmen feel "at home"  
in this route. For Tourists' Guide (an attractive  
illustrated book) of 100 pages, containing full  
information and accurate maps of the Fish-  
ing grounds and Lakes, address A. D. LEE,  
Sec. Pass. Agent, Grand Rapids, M.

TRADE—"BEATS THE WORLD."—MARK.  
**Old Judge Smoking Tobacco.**

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.  
THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, known as by all burning papers, namely: The Oil of Creosote. CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 10th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOUR and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Sold by all leading dealers. Try them and you will use no others.  
Manufactured by GOODWIN & CO., 207 and 209 Water St., NEW YORK

**HAWES'S PIGEON TRAP.**

THIS TRAP IS PLACED IN THE GROUND, the top level with the surface. When the cord is pulled one-half of the lid revolves within the TRAP and DRIVES THE BIRD INTO THE AIR. Sportsmen will at once appreciate the advantages. Price \$1.

## DUPONT'S

Rifle, Sporting and Blasting Powder.

The most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, es-  
tablished in 1805, have maintained their  
great reputation for seventy-eight years. Man-  
ufacture the following celebrated brands of Pow-  
der:

**DUPONT'S DIAMOND GRAIN.**  
Nos. 1 (coarse) to 4 (fine), unequalled in strength,  
quickness, and cleanliness; adapted for Glass  
Ball and Pigeon Shooting.

**DUPONT'S EAGLE DUCKING.**  
Nos. 1 (coarse) to 3 (fine), burning slowly, strong,  
and clean; great penetration; adapted for Glass  
Ball, Pigeon, Duck and other shooting.

**DUPONT'S EAGLE RIFLE.**  
A quick, strong, and clean Powder, of very fine  
grain, for Pistol Shooting.

**DUPONT'S RIFLE FG, "SEA SHOOTING,"**  
FFG and FFFG. The FG for Long Range Rifle  
Shooting, the FFG and FFFG for general use,  
burning strong and moist.

Sporting, Mining, Shipping and Blasting  
Powders.

Of all sizes and descriptions. Special grades for  
export. Cartridge, Musket, Cannon, Mortar and  
Mammoth Powder, U. S. Government standard.  
Powder manufactured to order of any required  
grain or proof. Agencies in all cities and prin-  
cipal towns throughout the United States. Rep-  
resented by:

F. L. KNEELAND, 70 Wall Street, N. Y.  
F. L. Use none but DUPONT'S FG or FFG  
Powder for Long Range Shooting.

THE HAZARD POWDER COMPANY  
MANUFACTURERS OF  
GUNPOWDER.

Hazard's "Electric Powder."  
Nos. 1 (fine) to 6 (coarse). Unequipped in point  
of strength and cleanliness. Packed in square  
cansisters of one pound only.

Hazard's "American Sporting."  
Nos. 1 (fine) to 6 (coarse). In 1 lb. cansisters and  
2 lb. kegs. A fine grain, quick and clean, for up-  
land prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."  
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. cansisters  
and 2 lb. kegs. Burns slowly and very  
clean, shooting remarkably close and with great  
penetration. For field, forest, or water shooting,  
it ranks any other brand, and it is equally ser-  
viceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."  
FFFG FFG, and "Sea Shooting" FG in kegs of  
25, 10, and 5 lbs. and cans of 5 lbs. FFG is also  
packed in 1 and 5 lb. cansisters. Burns strong and  
moist. The FFG and FFG are favorite brands  
for ordinary sporting, and the "Sea Shooting"  
FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder,  
GOVERNMENT CANNON AND MUSKET POW-  
DER; also, SPECIAL GRADES FOR EXPORT,  
OF ANY REQUIRED GRAIN OR PROOF,  
MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Com-  
pany's Agents, in every prominent city, or whole-  
sale at our office.

## FOREST AND STREAM.

NEW YORK, THURSDAY, OCTOBER 7, 1880.

**APPRECIATED.**—We publish elsewhere, as an indication of the popular sentiment on the subject, some of the letters which are coming to us indorsing our course in respect to the "Dittmar Sporting Powder." Indeed no other course was open to us. Having fully satisfied ourselves of the peculiarly dangerous nature of this compound, we could have done nothing else than just what we did, namely, publish the facts fully and fearlessly. To perform what we believed to be our duty was in itself sufficient satisfaction. The assurances that our action is appreciated gives us added gratification.

**FISH OUT OF WATER.**—It is well known that some fishes can exist out of water for a long time, and many instances are upon record of carp, catfish, fresh water gars and others which have some way of keeping the gills moist, and so are enabled to breathe our atmosphere; but we now have to record an instance of a fish being shipped by rail a long distance, and arriving there alive and safe. During the past summer Col. McDonald, of the U. S. Fish Commission, while pursuing his investigations for the census of the fishery interest, happened, while in Alabama, to obtain two large buffalo, *Bubalichthys urrus*, from the Alabama River, which he wished to send to the Smithsonian Institution, and thinking that it might arrive in better condition if left alive as long as possible, he packed in the Southern or "Spanish" moss, and delivered it to the express office at Montgomery, where it lay twelve hours before starting. Exactly how much time elapsed between the taking of the fish from the water and the opening of the box in Washington we do not know, but certain it is that when it was opened both fish were alive.

### REPORT OF THE NEW YORK FISH COMMISSION.

THE eleventh annual report of the Commissioners of Fisheries of the State of New York for the two years ending December 31, 1879, has just been laid before us, no report having been made last year. From it we learn that there has been a steady advance and improvement in all departments, and a gradual but apparent replenishment of the rivers and lakes. Complaint is made that the efforts of the Commission are to a certain extent counteracted by the reckless disregard with which protective laws are treated by a certain portion of the community that would enjoy or destroy in the present to the neglect of the future, and we are glad to see that the Commissioners are becoming interested in the subject of laws, as we believe that the whole question of fish laws in every State should be considered by its Fish Commission, and no law passed without their sanction and approval, while they should at the same time be empowered to enforce them. The policy of the New York Commission has been to educate the people up to the point of taking care of the fish which they supply them with, and a beautiful policy it would be if it were not for the fact that there are in every community persons who have no thought or care for the general welfare, and who would take the last trout or shad in the stream for their own table or for market, if it were possible to get it, and that they recognize this is shown when they say, "Volunteer effort will never be sufficiently repressive, and among the associations for the protection of game only one or two have been of much use."

At the last session of the Legislature, the number of Commissioners was increased from three to four, and it was understood that this was with a special view to the cultivation of Long Island streams and the propagation of salt water fishes, which are of great value, perhaps more than the entire fisheries of the rest of the State, and which have, like the sea fisheries of all countries, been neglected until the recent experiments of the U. S. Fish Commission in hatching cod attracted attention to it, when it at once struck everybody that there was no good reason why fish should not be increased in salt water as well as in fresh, the only thing to be considered being the enlarged field, which would, of course, require operations to be upon a scale in accordance with it, a matter rendered easy by the new methods now in use in fish culture, which have been adopted everywhere for extensive work.

Two species of trout from California have been obtained which they (the Commissioners) call "mountain trout" and "McCloud River trout," whatever they may be, as the scientific name is not given. And here we would say that the New York Commission is not happy in its choice of common names for many fishes, having a nomenclature of its own not recognized elsewhere—as "Oswego bass," "strawberry bass," "bull heads," etc. But, to return to the trout. It is said that these Californian fish are superior in rate of growth and hardness to the native, though not so beautiful. We confess to being a little puzzled at this, as we thought that one of the varieties was *Salmo irideus*, the beautiful "rainbow trout," but not having seen the fish in their ponds, this may be our mistake.

Of "salmon trout," *S. namaycush*, many specimens have been reared in confinement at Caledonia, and are found to be very sensitive to temperature, some of them being six or seven years old, and weighing twelve pounds, being perfectly domesticated, as shown by their breeding in confinement.

The shad season was favorable, and a good showing is made of fry hatched between May 14 and June 20, when a freshet put a stop to operations after 6,686,000 had been turned loose, the largest season's work for the past five years. The catch by the fishermen is also reported in a quotation from the Rochester Express as being exceptionally large, "so much so that the lands along the river have been freely manured with shad, and tons of fish have been thrown over at Albany by the fishmongers, who would not ship at the reduced price demanded by outside market men."

Carp have received some attention, 500 young having been received from Prof. Baird in November, 1879, which were distributed to eighteen persons, none receiving over twenty-five specimens; and their growth and acclimatization is a subject for future reports. Letters reporting the success of

plantings in different parts of the State are published, and an appendix gives the list of eggs, fry and adult fish distributed, making a very good showing of work done.

### LAUNCH OF THE RAFT.

WE had been fishing from an old raft, which, if it had ever been a thing of beauty, was not "a joy forever," for it had annoyed us up to the jumping off point, where patience ceases to be a virtue and commenced to indicate a very decided tendency to laziness or stupidity, and the only resource remaining was the construction of a new raft, one built after the most approved model and known as the "Prime Raft." The manner of its construction is best described by the graceful author of "I Go a Fishing."

Having cut your two side logs, hew near each end of these a notch as deep as you please, only let this notch grow wider as it deepens. This is easily done by cutting out with an axe. Then cut your cross timbers and hew their ends down, if necessary, so as to slip the ends into the notches in the side timbers. Having slipped the end through the notch, split it and drive in a wedge to make it hold tight in the notch. You will thus have a stiff, stout frame and can pile on your cross-logs and balsam boughs with perfect assurance that the raft will not go to pieces.

When it was announced that the raft was completed and ready to be launched business was universally suspended and the anglers at the adjacent camps made a holiday of the occasion. The camp fires smoked with a denser smoke, dish cloths fluttered from every cook-house, and tin pans, pails and kettles shone like silver beer-mugs. Ample provision had been made for the comfort and convenience of the sight-seers, every one of whom had the option of standing in front by the music or of shinning up as many trees as they chose and gazing down upon the skilled workmen as they busied themselves about their different specialties connected with the enterprise.

After much anxious waiting everything was ready, and at the third or fourth "Ye ho! all together, boys," she glided like several serpents into the water, and as she straightened herself, business-like Jack did not break over her the traditional bottle of champagne, but burst a vial of tar oil and christened her the Goslow.

The echoes returned a hundred fold the cheers that rolled down the mountain sides, the tinware clattered with joy, and every dish cloth and towel fluttered with delight. The old bagg log at the camp took a tumble and sent up a cloud of sparks, while the birds piped their cheerful songs and filled the summer air with their long-drawn cadences.

The Goslow was launched and completed independent of Congressional appropriations, and the feverish expectancy of its projectors was quieted. The ship-builders of the Delaware and the Clyde were at last convinced that their yards could no longer monopolize the naval architecture of the world. On her trial trip she attained, under the unfavorable conditions of a head wind and a defective paddle in the hands of an inexperienced paddler, according to Whistler's new system of guessing, the very satisfactory record of one and a quarter kinks an hour. This record will be very materially improved upon when her floating gear has dovetailed closer, and when she has more perfectly shaped herself to the peculiar formation of the lake.

Her fittings were of the most gorgeous description compatible with utility. She was covered with huge sheets of spruce bark and carefully selected boughs. A chunk of red sandstone of the Devonian age, fastened to a three-quarter-inch manila rope, made an anchor convenient in size and weight. There were two luxurious seats, one at each end of the raft, which was intended to go like a ferryboat, either way.

The saloon and staterooms are intended to be left in the woods, forming, in connection with the kitchen, what is known as the camp. When the Goslow is in commission these rooms may be reached on emergencies by jumping overboard and swimming ashore. The bathroom, anywhere in the lake, furnishes ample conveniences for those who believe cleanliness akin to godliness. Altogether it was admirably adapted to the purpose for which it was intended, and its appearance was in perfect harmony with its surroundings.

A raft after the Prime model possesses some advantages

over the ordinary boat. In the matter of speed it is deficient, but for real solid comfort after the fishing grounds are reached the properly constructed raft bears off the palm, and more than repays the extra time and power required to move her. The angler can walk about without being obliged to say, "Now, Jack, be careful and lean over a little while I get by you. All right now."

There is lots of elbow-room and no "hard-a-lee"ing.

MILLARD.

## THE DETONATION OF "DITTMAR SPORTING POWDER."

UNITED STATES CIRCUIT COURT.—New York, Feb. 19, 1886.—Before John A. Sledge, United States Commissioner Southern District of New York. Deposition of Carl Dittmar, of Binghamton, N. Y., who, being first duly sworn, deposes and states in answer to Cross-Question 536:

"My gunpowder, when I first made it, had the same tendency as nitro-glycerine powder. It burst most all the guns at first, when I began to introduce it. It was just the same as if I would use NITRO-GLYCERINE POWDER. I have it now so that it is tamed down, and don't burst any more guns."

THE affirmations quoted above were made under oath. They were not originally intended for publication in the FOREST AND STREAM, but we have already printed them twice, though without the permission of the author, and we venture to tax the reader's patience with another repetition of them. In this sworn statement the manufacturer of the nitro-cellulose explosive compound, styled "Dittmar Sporting Powder," confirms our own views of that product. And the fact that we accepted the first three of these affirmations, and did not accept the last one, is a good and sufficient explanation of our discarding the hitherto prescribed and approved shotgun tests in our experiments with the explosive. Those who may have followed us through our study of the powder to this point, will readily agree that such experiments could never have ended in anything more decisive than the unsatisfactory, contradictory and valueless results of five years of shotgun tests. Those experiments have also been disastrous. Had this frank avowal of the true nature of the "Dittmar Sporting Powder" been made in 1875, the sportsmen of America would have been spared the loss of some thousands of dollars worth of guns, and one man at least would have been prevented from maiming himself for life.

There was never a product put upon the market more prolific of debate than that explosive compound which is grained like black powder and has the color of nitro-glycerine. The discussion was not provoked by the legitimate difference of opinion attaching to an agent which produced certain uniform and easily determined effects. The baffling thing here was that no two disputants could agree as to what the action of the "Dittmar Sporting Powder" really was. The fact was, and is, that that compound being a nitro-cellulose product may explode by simple combustion or by detonation, and between these two extremes in a wide variety of modes and with a baffling variety of effects.

To attempt to determine the explosive nature of the powder by experimenting with it in a shot-gun is the sheerest folly, although, owing to the strenuous and successful misrepresentations of the powder, that folly has only now become manifest. We have attained certain results in the course of our tests of this powder, which, when considered in the light of our theoretical study of the product, are more satisfactory and conclusive than fifty years of shot-gun trials. We showed last week how successfully the manufacturer had explained away the unfavorable results of shot-gun trials. We venture the remark that the FOREST AND STREAM'S tests cannot be so readily evaded.

### ANVIL EXPERIMENTS.

Our first experiments were with an anvil. They were suggested by the following statements:

"If my powder is put on an anvil and struck with a hammer it does not explode."—Letter of Carl Dittmar in FOREST AND STREAM, March 16, 1876.

"It cannot be exploded by concussion."—Circular of Dittmar Powder Company (No. 2).

"It can never be exploded by any concussion or friction."—Circular of Dittmar Powder Manufacturing Company (No. 2).

Now, evidently, the simplest way to test the truth of these statements was by trying whether or not we could explode the powder on an anvil with a hammer. We tried it.

1. A pinch of the powder "FFF," sent to us by Dr. S. P. Nash, was placed on an anvil and struck with a light hammer. It exploded.

2. Same experiment repeated with "B" brand, "C" brand and "FFF" brand, which had been received by us in sealed cans from the Dittmar Powder Manufacturing Company (No. 2). Result in each case the same as in experiment 1. These tests are so simple that any one can repeat them. The face of a flat-iron may be substituted for the anvil.

3. A pinch of "C" brand was placed on the anvil and a gun was placed over it. Upon this was held a light hammer, which was then struck with a heavier hammer. This experiment was repeated several times, and each time the powder exploded. In repeated trials with black powder (Eagle No. 3) it was found that the black powder would ignite after the blows had been repeated long enough to make the hammer cut through the wad and come into contact with the face of the anvil.

4. Same experiment, with leather pad over powder. The

Dittmar easily exploded every time. The black could be ignited only after repeated and heavy blows.

We had now obtained sufficient proof to satisfy ourselves that the "Dittmar Sporting Powder" can be, under certain conditions, exploded by "concussion or friction." A more interesting test was then made with the powder in the pressure gauge.

5. In a paper shell, of which the cap had first been exploded, we placed 3½ drs. of the "B" brand and placed a wad over it. Upon this was rested a short iron bar, the other end of which was capped with a cylinder of lead. This was placed in the pressure gauge with the end of the steel pin of the gauge resting upon the lead cylinder. A charge of powder was then exploded in the gauge, the effect of which was to force the iron bar by a sharp concussion down upon the wad and charge of Dittmar powder. The latter exploded.

6. The same test was repeated with 3½ drs. "C" brand, and with a like result.

7. Repetition of 6 with same result.

8. A thorough test of black powder (Eagle No. 3) was then made, but the powder did not explode, although a blow was struck sufficient to reduce the grains to dust. This dust, when ignited afterward, burned with a sudden flash.

### MORTAR EXPERIMENTS.

The mortar used was a heavy cylindrical block of cast iron, strengthened by massive wrought iron bands shrunk upon it, and bolted at an angle of 45 deg. to a timber foundation sunk in the earth. The bore was 4 in. in diameter. Into the bottom of the chamber was sunk a steel disk, 3 in. thick, leaving the length of bore 5 in.

The shot, also cylindrical in shape, fitted the bore with great exactness, was 7 in. long, and weighed 27 lbs. At the centre of the lower end of the shot was a shallow cavity for the charge. In the centre of this cavity was a recess into which the exploder fitted in such a manner as to leave the fulminate of the cap in the powder chamber. From the centre of the shot to the outer end was a small hole for the passage of the electric wires, which are connected with a spark generator. In place of the wires a safety fuse may be substituted.

The method of firing the mortar is as follows: The disconnected wires are first introduced into the percussion cap, and passed through the shot, the cap being fitted in place. The powder is then placed in the powder chamber, and secured by pasting over it a thin sheet of paper, care being taken so that the surface of the shot when in the mortar may not be raised even by the thickness of the paper from the steel face of the bore. The shot being in place, the wires are connected and the charge fired by electricity.

This mortar is so accurate, as shown by repeated tests, that with the same charge of the same powder—provided the composition of that powder be uniform—it will throw the shot into the same hole again and again. It is evident that it should do this, for the conditions of the mortar itself are the same in each test. Different methods of firing may, however, be employed: fuse, medium percussion cap, and stronger percussion cap; and in this way the conditions of explosion may be varied. The degree of difference in the results then gained will depend altogether upon the character of the explosive employed.

Thus a nitro-glycerine powder, like dynamite, we have seen may, according to the conditions, burn by simple ignition, or it may detonate. Tested in the mortar, we found that a charge of two-pennyweights of dynamite, fired with a fuse, simply burned and did not throw the shot out of the mortar. Exploded by means of a percussion cap, it threw the shot 230 feet. Again, the same charge, when a stronger cap was used, threw the ball 241 feet. It was clear that there was here a radical difference in the natures of the two actions, and that each of these natures was developed by the condition of the explosion.

Black gunpowder, we have also seen, when exploded under different conditions, manifests at all times essentially the same explosive nature. Tested in the mortar, we found that four pennyweights of black powder (Eagle No. 3), fired with a fuse, threw the shot 146 feet. Fired with a medium percussion cap it threw the shot 162 feet, and with the stronger cap 193 feet. Here there was manifestly only more or less complete actions of the same nature.

Having determined these facts, it is evident that the mortar test is a most excellent one to determine the true nature of various explosive compounds; and that, according as the manifestations of their explosive natures when tested with fuse and cap, approximate the action of nitro-glycerine, or of common black powder, the compounds themselves ought to be classed with the one or the other. If a powder acts in the mortar essentially like gunpowder, it belongs with gunpowder; if it acts like dynamite, it belongs with dynamite.

The powder used in the mortar experiments was the "C" brand. The tests were made to determine, first, the uniformity of the powder; second, the different manifestations of its detonating nature. The mortar was in each case charged with two pennyweights of the powder, and the greatest care exercised to secure perfect uniformity of conditions for each explosion.

1. Fired with a fuse. The shot was thrown in repeated trials: 12ft.; 12ft. 6in.; 6ft.; 2ft.; 5ft.; 8ft. 6in.; 6ft. 8in.; 5ft. 1in. Minimum, 2ft.; maximum, 12ft.; average, 7ft. 7½in.

2. Fired with a percussion cap, medium strength. The shot was thrown in repeated trials: 14ft.; 17ft.; 7ft. 6in.; 9ft.; 6in. Minimum, 6in.; maximum, 17ft.; average, 9ft. 7-1-2in.

3. Fired with strong percussion cap. The shot was thrown in repeated trials: 126ft.; 87ft. 4in.; 149ft. 6in.; 140ft.; 150ft.; 145ft.;

160ft. Minimum, 87ft.; maximum, 169ft.; average 138ft. 11 5-16in.

Considering first the uniformity of our results, or more strictly speaking, the lack of uniformity, we find notable variations in the results gained in each set of tests. Fired with a fuse the distances which measure the ballistic force range from 2 ft. to 12 ft. 6 in., (or as 1 to 6½), a range which is far exceeded when we come to the trials with a medium strength percussion cap. Here the variation is from 6 in. to 17 ft. (or as 1 to 34), a difference sufficient at all events to give some explanation why those who have shot this compound in a gun have made so perplexingly different reports of its action. These different results are best explained by the theory that in the second series of tests, the powder made only a partial manifestations of its detonating nature.

In the third series, by the use of a stronger grade of caps, this detonation was made each time more complete, and we find a less startling difference of distance. Here the variation was from 81 ft. 4 in., to 169 ft. Hence, it would appear that to secure the most uniform results with "Dittmar Sporting Powder," it must be exploded under conditions which will insure its detonation. Those are not the conditions under which the average man cares to discharge his gun from the shoulder.

Again, comparing the results of these three tests with the results obtained by the same tests with dynamite and black gunpowder, we have:

Dynamite.....	230	241
Dittmar.....	77 1-2	97 1-5
Black.....	146	162 2-3

From this it appears that the "Dittmar Sporting Powder," in respect to the difference of its explosion under different conditions, bears a closer analogy to dynamite than to black gunpowder. Were its character to be inferred from these tests, we should be compelled to place it among the explosives which may be detonated, did we not know already that it belonged just there and nowhere else.

The figures acquired by our mortar experiments are suggestive. If we were ignorant of the composition of the powder, and of its qualities as determined by chemistry, these figures would be unintelligible. Keeping clearly before us the conditions already explained, under which explosives of a two-fold nature may be exploded, by simple combustion or by detonation, we may satisfactorily account for each shot fired from the mortar. The charge at one time simply burned, at another it detonated, in others it partially burned and partially detonated.

The "Dittmar Sporting Powder," the manufacturer claims, is twice as strong by weight as black powder. If by that it is meant that the powder, exploded under similar conditions, has greater ballistic force, the claim is manifestly unfounded.

But just here it must be remembered that detonating explosives are not properly projectile agents. The mortar experiments, which measure only the projectile work accomplished, are no true tests of the relative strength of such widely diverse explosives as black gunpowder and "Dittmar Sporting Powder." One is in its action gradual and ballistic; the other may be instantaneous and shattering.

The charge of black powder employed was four pennyweights, that being equivalent, according to the statement already referred to, to two pennyweights of the Dittmar nitro-cellulose. But the latter, when given its greatest power, failed to throw the shot as far as the black powder threw it under like conditions. If the Dittmar powder is twice as strong as the black, where did all this strength expend itself? The answer is plain. This highest possible explosion of "Dittmar Sporting Powder" is by detonation. In detonation the force of the explosion is exerted instantaneously and in every direction alike; no time is allowed for it to concentrate itself in the line of the least resistance. In this mortar experiment only a part of the force was ballistic or projectile; the rest was exerted against the sides of the confining chamber. The mortar had been constructed to withstand just such a trial, and the shattering force, which would have destroyed an ordinary firearm, was expended in heating up the solid mortar. If, instead of firing that charge with an electric spark and from a heavy mortar, we had fired it from a gun held to the shoulder, and with our finger to the trigger, it is extremely questionable whether we would now be writing about the detonation of the "Dittmar Sporting Powder," or, for that matter, about anything.

HABITS OF SALMON.—A step in advance toward a correct knowledge of the life history of our salmon has been made by the Fish Commission of Maine, it having been decided to label all the breeding fish in the hatching works at Bucksport with tags of platinum and then to liberate them and to continue this operation for a succession of years in the hope of obtaining more light upon certain vexed questions such as the subject of biennial spawning, etc. The similar experiments which have been made in this direction have been unsatisfactory inasmuch as they were not continued in a systematic manner, and the returns were meagre and added but little to our knowledge. The Maine Commission may accomplish much by following out their programme in a systematic manner, which we have no doubt will be done.

STEAMBOATS AND FISH.—The fishermen on the Rappahannock River account for the scarcity of shad by the fact that a steamboat runs up the river three times a week. This may satisfy them, as they only look at this one river and have no other theory to offer, but if they will get out their telescopes and take a look at the amount of navigation, both steam and sail, on the Hudson, where one is seldom out of the sound of

the pounding of paddle wheels or the sloshing of screw propellers, they will wonder why there can be any slud there; yet the fact is, that of all slud rivers on this continent the Hudson is the best—that is, it furnishes more slud than any other. Evidently the Rappahannock had a more delicate organization than those of the Hudson, or there is something the matter with the theory.

## The Sportsman Tourist.

OCTOBER.

It is October, and the glory of the year

Is in the skies and on the woods extended far and near:  
It glows in burnish'd clouds, it flushes all the air;  
It lies in hollow groves, in uplands brown and bare.

The tufted groves have lost their bright mid-summer green,  
And now a softer russet blush creeps o'er the woodland scene:  
Or distant purple hills there float a gauzy veil,  
A silver vapor hovers o'er the river in the vale.

The orchard trees all glisten with globes of yellow gold  
That bend the bough and strew the earth with opulence untold;  
The ripened cornfields shake their pennons thin and white,  
And to a feast the chestnuts the village school invite.

The gossamer spider-web is strung from tree to tree,  
And up the air the thistle-down floats like a ship at sea;  
The asters and the dahlias like flames in gardens glow,  
And by the roadside wild flowers display a royal show.

Dim seen, the cautious angler glides on from brook to brook,  
Now by the open meadow, now in some lushy nook,  
And now across the mill-pond, with water-plants o'ergrown,  
I see his floating boat, and where his lines are thrown.

And o'er the salty marsh the gun's report I hear,  
And see the snipe and curlews stoop in their swift career;  
While o'er the open bays I see the wild ducks wheel—  
The red-neck and the widgeon, the whistler and the teal.

Oh! glorious days of autumn! with all your pomp of skies,  
Your harvests and your fruits, your flowers of matchless dyes;  
How dear to manly sportsman your ripe, imperial time,  
Your sports by "Stream and Forest," in Nature's royal prime.  
Pecanoe Bay, L. I. ISAAC McLELLAN.

## AN OLD-TIME NEGRO HUNTSMAN.

IN the earlier part of this century, my father and uncle—the former a judge for more than forty years—acquired in their youth a large tract of land some 15,000 acres in extent, lying in the upland and mountainous country where the Alleghenies and the Blue Ridge draw together. They were both men of large families and of large possessions, both in lands and negroes. This mountain property lay some sixty or seventy miles from the paternal mansion, and the headquarters of our family; but for nearly fifty years it was their custom to visit annually this grand game preserve—for such it was—and enjoy, in company with a large number of invited friends, several weeks of shooting and hunting.

A great train we were, as in patriarchal fashion we wound along the roads westward, with teams of males and saddle-horses, wagons loaded with the good things of this life, a numerous pack of hounds, and all the implements of the chase necessary for insuring success. With what pleasure these reunions of relations and friends were looked forward to from year to year may be readily imagined, as the same party of from thirty to forty, or their representatives, as deaths or accidents made gaps in our ranks year after year, gathered around the camp fires that marked our route.

A great train we were, as in patriarchal fashion we wound along the roads westward, with teams of males and saddle-horses, wagons loaded with the good things of this life, a numerous pack of hounds, and all the implements of the chase necessary for insuring success. With what pleasure these reunions of relations and friends were looked forward to from year to year may be readily imagined, as the same party of from thirty to forty, or their representatives, as deaths or accidents made gaps in our ranks year after year, gathered around the camp fires that marked our route.

It is needless to say that he was inordinately proud of his hounds, which were, in truth, a well-chosen pack, numbering, perhaps, from twenty to thirty. The renown they reaped he claimed for himself—their failure or disgrace he shared to the full. There was no pack in the whole of Virginia, he held, that could touch them. The excellencies and the weaknesses of each dog, like all good huntsmen, he was accurately acquainted with.

As huntsman he was expected to train the young dogs as they came in to foxes, and on all good hunting days he was allowed the choice of the stable, which generally contained a number of young bloods and colts, and it was a noted fact that Jake never failed to single out the best horse for his own use. He was a most excellent rough rider, though there was nothing in his appearance to mark his fitness for the post of honor my uncle had assigned him. In figure he was short, thick set, and heavy built, and he sat his horse like a bag of meal; but there was something in his broad, genial, mirth-inspiring face that drew the young to him as if by magic; while the absolute control he had over his hounds, and the trumpet tones of his voice ringing through the forest, soon conveyed you the impression that he was the right man in the right place; and when the quarry, be it deer or fox, was up and the pack was racing on a burning scent, the way in which Jake cleaved his way at a gallop through the brush, or cleared the fallen logs and ravines that intercepted his career, was enough to convince you that it would require a more than ordinarily bold horseman to hold his own with him.

During one of the annual hunts at which my uncle had command, a party of us were one morning wending our way to a new drive. The day before the whole pack had run off.

All the dogs, save one, however, had returned by night, and this one was still absent. My uncle expressed great concern at, as he supposed, the loss of the dog, which was named King, and was a special favorite. Before we had got to our hunting-grounds, however, the notes of a single hound running on which was evidently that same King took upon our ears.

"Jake," said my uncle, "that's King?"  
"Yes, Mars' Sam, that's King. I'm nos' sho,"  
And King it was, sure enough. He appeared to be likely to cross the road some quarter of a mile further on, and my brother received orders to gallop on and head off the deer. A few minutes later the report of a gun told us of his success, and riding up, we found him standing over a fine doe, with King by his side. The dog had been running the deer apparently for twenty-four hours. It seemed certainly rather an improbable supposition, but both Jake and my uncle stoutly maintained it to be the case.

Whether it was a trace of incredulity on my part that Jake saw in my face as we were riding along together shortly after this, I know not, that made him exclaim to me: "Why, sir, that's nuthin' for them ar dogs to do. Mars' Sam's stock o' dogs is the rale old British bred, and that race o' King's war'n' nuthin' to what I've known them breed of dogs to do. There was waist an old red fox up thar in the mountain right above Mars' Sam's, and many was the race I had sent him, but I never could catch him, 'case I was always obliged to blow off the dogs, and give him up for want of time. Well, sir, I swore, come Christmas, that cotch that fox I would if it took me all the holidays. I know'd 'zactly whar he lay, and by day on Christmas morning had him up. All Christmas day I run that fox, and 'bout night you never heern such a chase. 'Next mornin' Mars' Sam he sends one of the nigger boys to see what had come o' me and the dogs. Well, sir, I took that nigger's fresh horse, and I runs that fox all that day. 'Next night Mars' Sam he sends another nigger to hunt for me and the dogs, but I takes his horse and runs that fox all that night. 'Next mornin' my last horse was done broke down, so I gets down and takes after the hounds on foot. But, Lord bless you, sir! it made no manner of difference, for the fox was walkin', and the dogs was walkin', all in full sight! Well, sir, me and the dogs walked after that thar fox till sundown, when we cotched him; and when Mars' Sam sent us for us, they had to git a wagon, and haul me and the dogs home."

"Why, Jake?" said I.  
"Eac', sir! You jest ask Mars' Sam. Dem dogs, I tells you, is the rale old British breed, and they 'lows no varmint that runs the ground to git away from them once the scent gits hot."

Carryover, Virginia.

## NON-RESIDENT GAME LAWS.

HAS A STATE THE RIGHT TO PROHIBIT A NON-RESIDENT FROM SHOOTING WITHIN ITS BORDERS?

PHILADELPHIA, SEPT. 23, 1880.

EDITOR FOREST AND STREAM:

There has lately been considerable discussion as to the right of the Western Game Society to prohibit non-residents from shooting within its borders without a license. I have taken the trouble to look the matter up some little, and if you consider it of sufficient interest to the "men of guns," it is at your service.

The above heading was suggested to me by reading the case of McCredy vs. State of Virginia, which was decided on appeal from the Virginia Supreme Court. The case developed the following facts: McCredy, a citizen of Delaware, was indicted, convicted and fined for the violation of the following State law of Virginia: "If any person other than a citizen of this State shall take or catch oysters or any other shell fish in any manner, or plant oysters in the waters thereof, he shall forfeit \$500 and the vessel, tackle and appurtenances." The case was taken to the U. S. Supreme Court on appeal, and it was there argued that the State law was in violation of the 2d sec. 4th Article of the Constitution, which declares that, "The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States."

Chief Justice Waite delivered the opinion in this case, which I have conducted as much as practicable, but would strongly advise all who are interested in this matter to borrow from some one of their law friends the book, and read the full opinion. It may be found in 4 Otto, p. 391.

The Chief Justice, after citing the above section of the Constitution, said:

"This section does not vest the citizens of one State with any interest in the common property of citizens of another State. The principle has long been settled in this Court, that each State exercises all its powers within its jurisdiction, unless they have been granted away, in a like manner the States own the tide waters themselves, and the fish in them, as far as they are capable of ownership, while running. For this purpose the State represents its people, and the ownership is that of the people in their united sovereignty. The title thus held is subject only to the United States' paramount right of navigation. Subject to this right (navigation) a State can grant in its discretion to its citizens the beds of rivers, to be used as a common for taking and cultivating fish. Such an appropriation is, in effect, nothing more than a regulation of the use by the people of their common property. The right which the people of the State thus acquire comes not from their citizenship alone, but from citizenship and property combined. It is, in fact, a property right, and not a mere privilege or immunity of citizenship. Following, then, this rule, and looking only to the particular right which is here asserted, we think we may safely hold that the citizens of one State are not invested by this clause of the Constitution with any interest in the common property of citizens of another State."

The italics in the above are my own.  
Following this decision to its legitimate conclusion, it cannot fail to impress one that if a State can make such a law as to oysters and fish, it certainly has the same power as to game. It will be observed that the Chief Justice words his opinion with a degree of caution when he says—"looking only to the particular right which is here asserted." He evidently intended to leave future controversies to be decided upon their own basis, but so far as precedent for the present, it is most assuredly a strong foundation for a game society to rest upon.

The opinion continues as follows on this point: "And as all concede that a State may grant to one of its citizens the exclusive use of a part of the common property, the conclusion would seem to follow, that it might by appropriate legislation confine the use of the whole to its own people alone."

Words could not be stronger than in the closing language of the above. Taking the law, then, as we find it, it follows as a matter of course that a State in its sovereign capacity

over the common property within its borders may grant to a body of men, or even to a single individual, a right to take such property to the exclusion of non-residents of such State, and in so doing it violates no provisions in the Constitution. I do not believe that any State Game Society could convict a resident of their State for shooting without a license, although I know of no decisions that cover this point. The inference is deducible, however, from the above case, that a State could not make such a distinction between its own citizens as to common property.

A collateral question to this, I noticed, was left in *status quo* in your Correspondents' column, where it was asked if a man could purchase, turn loose and kill game upon his own land during the closed season. I should certainly say "No" to this proposition; for if the contrary be the case, it would make the close season a nullity. For example, take the case of a couple of gentlemen of my acquaintance who own a large tract of quail land in one of the Southern States. Now, if these gentlemen have the right to kill game out of season on their own lands, they certainly have the power to delegate that right to as many of their friends as they think proper. It may readily be seen that in many parts of the country such a construction of the closed season would be a mere farce.

F. H. J.

## Natural History.

### THE FRENCH DEEP SEA DREDGING.

WE referred very briefly a short time ago to the results of the deep sea explorations carried on during the past summer in the Bay of Biscay, but at that time we were able to furnish only a few general facts in connection with the investigations made by the *Travailleur*. A recent paper by Dr. J. Gwyn Jeffreys, read before the British Association for the Advancement of Science, gives us, however, more complete information with regard to the expedition, and we therefore present to our readers some extracts which we think will be of interest to them. The dredging was undertaken by a commission appointed by the French Government, and consisted of Mr. Milne-Edwards, President; Marquis de Folin, Prof. Alphonse Milne-Edwards, Prof. Vaillant, Prof. Merion, of Marseilles, Dr. Paul Fischer and M. Perier, of Bordeaux. At the suggestion of M. de Folin, the Minister of Public Instruction invited Dr. Jeffreys and Rev. A. M. Norman to accompany the party and assist in the work. The vessel employed was a side-wheel steamer of 900 tons, of 150 horse-power, and was well fitted up with all the necessary apparatus for dredging. She had a crew of 128 men, besides the special assistants who accompanied the different members of the commission.

The expedition started from Bayonne on the 17th of July. From that time until August 1, with the exception of Sunday, the work of sounding, dredging and trawling was kept up without intermission. The weather during this whole time was fine. Dr. Jeffreys states that:

"The principal object of the expedition was to ascertain the nature of the fauna which inhabits at considerable depths this part of the Bay of Biscay; and this object was successfully and thoroughly accomplished. Twenty-three dredgings were made for that purpose, at depths ranging from 337 to 2,600 metres, each metre being about thirty-nine inches, or rather more than half a fathom. The dredgings between 600 and 1,000 fathoms were the most important. Every department of the Invertebrata was well represented; and novelties were discovered in Mollusca, Crustacea, Echinodermata, Annelida, Actinozoa and Sponges."

In a physical and geological point of view, this French expedition has borne good fruit. No less than 103 soundings were made. They have proved the existence, within a few miles of the coast, of a submarine valley opening from the Fosse de Cap Breton, and extending to a point opposite Cap Penas. The striking irregularities of depth within a narrow area, which thus has been exposed, were noticed in a Bayonne newspaper of August as "*des grands fonds sous-marins, qui trahissent sous le cœur de l'Atlantique les volées pyrénéennes*."

As a general rule, it may be said that where mountains or high land approach the sea, the depth of water is greater off that coast than where the land lies low. But this must depend in a great measure on the geological nature of the land adjacent to the sea. If the formation be granitic or gneissic, the wear and tear or denudation must be slower than if the formation be sandstone, calcareous or tertiary, and the action of waves and streams on the surface of the land must be proportionally increased or decreased, and must cause the sea bed to be more or less filled up in the course of time. Everywhere during the dredgings of the *Travailleur* in deep water the sea bed was found to be covered by a thick layer of mud, of a different color from that of the Atlantic ooze; and this mud has probably accumulated from untold ages by the incessant afflux of the Gironde, the Adour, and numerous other rivers and streams into the Bay of Biscay. As may be supposed, the fauna which inhabits this mud is very scanty, and it requires a considerable amount of patience and perseverance to extract a few organisms from the unpromising material.

Very soon after the return of the expedition, a Preliminary Report of the zoological results of the dredging was prepared by Prof. Alphonse Milne-Edwards, which was afterwards published in the *Journal Officiel de la République Française*. The mollusca, a large part of which have been handed over to Prof. Jeffreys for preliminary examination, appear to include 152 species, of which 138 were species found by the *Porcupine* in 1870, three are peculiarly northern, one Mediterranean and eleven new to science.

A curious mollusc discovered by the expedition is the *Mytilus teloneus*, a mussel of considerable size, inhabiting the deep water, and living in the deep mud above referred to. Dr. Jeffreys states that "it moors or fixes itself by means of a large and densely matted byssus, which is spun by the foot. This byssus is capable of being spread over a considerable extent of surface, and it not only prevents the mollusc sinking into the soft mud and being smothered or buried alive, but enables it to feed comfortably on the innumerable animalcules, which swarm on the surface of the sea bed. It is of the same use to the mollusc as the snowshoe is to the Arctic traveler."

## THE UNKNOWN BRAZILIAN EDENTATE.

[NOTE.—The account given below by our correspondent, Mr. Linden, is extremely interesting when taken in connection with the accounts given by Mr. F. Muller in *Nature* last year. It is true that the two stories do not seem to agree very well and it is possible that they may refer to two different animals. It should be remembered, however, that the statements of the German naturalist were based merely upon the statements of the country people and on rumors more or less vague and not always traceable to any reliable source, while the trustworthiness of this account is vouched for by our correspondent.]

It is hardly necessary to say that further and more detailed particulars concerning this supposed huge edentate are eagerly looked for by naturalists, and that the first specimen which falls into scientific hands will be a prize of the greatest value.]

It is about a year ago since the scientific world was startled by the report of a German naturalist traveling in southern Brazil, whence, in a lengthy communication to *Nature*, he substantiated the occurrence of a large and hitherto unknown quadruped inhabiting those forests. The animal itself had not been seen by him, but its tracks and diggings, as manifested in huge furrows channeled out in the soil of its primeval forest, supported the supposition that it was a creature of gigantic size. Notwithstanding the somewhat sensational character of the communication, it was, however, generally credited on account of the authenticity of its source.

By instituting inquiries in regard to this matter in the central valley of the Amazons, where I had spent in former years several months in collecting specimens of natural history, I have come lately in receipt of several communications, all of them by one of my Brazilian friends residing there, which tend to throw some light upon this mysterious creature. My informant, who has squatted down twelve years ago in the very heart of the Amazonian forest, has come to know, in the course of time, all its notable animals, birds and reptiles, and gives the following points of information:

There are, he says, among many curious animals, three distinct and well marked species of the anteater living there. The smallest has, like many of our quadrupeds of that interesting region, a prehensile tail, and is the most common species. The middle-sized one, which, in the most minute details, corresponds by designation with the great anteater, *Myrmecophaga jubata*, is called by the Indian hunters in their native dialect of the lingua geral, the Tamandua bandeiro, and is not often seen on account of its shy and retired habits. The third species again is utterly unknown to the white soldiers of that region, though the Indians, who have an exact nomenclature for every large beast, bird, fish, lizard, or beetle, know it well by the name of Tamandua assu, which last adjective signifies large.

It will serve the present purpose best to give a rough extract of the personal experience of my informant respecting a hand-to-hand encounter he had himself several years ago with one of these huge and singular animals. Our dogs, he says, while we were one day out hunting for peccaris, came upon the track of some strong scented beast, as evidenced by their excited actions and loud barking. Following closely upon their heels, I got sight of a creature larger, though less bulky, than the tapir, called here in the Indian dialect the anta. But little exertion was needed to come up with it, as it moved rather slowly, and allowed myself and my brother to get close to it in a short time. We were armed with single barreled shot-gun, loaded with coarse shot, and an efficient breech-loading rifle. My brother fired first when about twenty yards from the animal, but although the ball upon later examination was found to have passed throughout the whole length of its body, it never slackened its speed, and only stopped running when at last cornered closely by the dogs.

It then raised itself, after the manner of the bear, upon its hind legs, using its great fore-paws, armed with formidable long claws, as a means of making an obstinate resistance. We had been frightened first by its singular aspect and great size, but now perceived that we had to deal only with a comparatively innocuous creature, hardly able to hold its own against the attacks of the dogs. To end this singular contest I advanced within a few yards in front of it and discharged the full contents of my shot gun into its well exposed chest, killing it almost instantly. Upon closer examination of our prize we found it in respect to structure to correspond with the common great anteater, and only differing from it by its color and greater size. Its snout was much elongated and the front teeth were lacking. The claws of its fore-feet were at least from four to five inches in length and about one and half inches in width at the base. The body extended in point of height that of the tapir, though it was less bulky and would have probably weighed less. Its fur was rather short, not bristly, and of a dusky hue, while the tail was long and bushy. Not knowing the scientific value of its skin or the skeleton, we left the creature to rot where we shot it, as the scene of the encounter was more than eight miles from home. On describing the animal to the natives about our plantation we ascertained that it had been seen by an old hunter on rare occasions though always far away from the vicinity of any settlements. It is easy to see that such an animal, armed with such great and stout claws, used in the digging up of the nests of the lupin and mounara ants, would be very likely to make great havoc in any soft soil in which the subterranean galleries of these insects are located. Diggings and furrows on such a big scale might naturally mislead persons unacquainted with the animal itself in respect to its true size, which had been theoretically exaggerated when its occurrence was first reported.

CHAS. LINDEN.

Buffalo Society of Natural Sciences.

TAME QUAIL.—St. Joseph, Mich., Aug. 30.—A few days ago I went into the country a few miles and stopped with a friend over night. As we stood at the gate talking in the edge of the evening, he said to me, "I want you, in the morning, to step over this field and see some tame quail (*Orizya virginianus*)."

I did not see them the next morning, but went out again in a few days, and getting there just at night, went to look for them. They are domesticated with a flock of tame turkeys of about twenty—two hens and about eighteen young. The young are about half grown. I found the turkeys at roost up in some apple trees and the quail on the ground near the trees. The latter ran off as I approached with my dog. The soon, however, returned. On making inquiries, I learned that the

turkeys hatched their young out in a field near the house. They came up at night and morning and were fed at the house, and rambled off during the day. One night, when the young turkeys were two or three weeks old, three little young quail came up among them. They have been with the turkeys ever since, and are now full grown. For the first two or three days they were somewhat shy, but since then they come around and feed and are as gentle as the turkeys.

When first seen the young quail were not larger than chipping sparrows. They brooded with the young turkeys under the hens till the young turkeys went into the trees to roost. The owner told me he had not watched where the quail roost, but one time saw them on the fence, and saw one fly up into the tree. In following the turkeys, if lost in the grass or weeds, they call, and the hen turkeys answer them, and go to them just as they do for their own young. The next morning I went out and saw them all together in the road. At my close approach with dog they run in the thickest group of young turkeys near the old ones. How they come with the turkeys is not known. My theory is that the old hen quail got killed, and the young ones came across the brood of young turkeys in the field; they being two or three weeks old, resembled the hen quail in size, and they followed and remained with them. Do any of the readers of the *Forest and Stream* know of an instance like this?

The owner of the turkeys told me that some years ago, when the country was new and little settled, a neighbor of his had a hen come up with five young quail with her brood of chickens, and that they grew up with them. They stayed all winter, and three of them layed next spring and remained till fall, and then two of the coveys stayed away more or less, but one covey remained entirely domesticated. I shall keep posted to see if they get through the winter without being caught.

LUTKOS.

THE EUROPEAN RUFF IN MASS.—Mr. Gordon Plummer, of Brookline, Mass., has just secured a fine specimen of the European ruff (*Phalaropus pugnax*), taken in Chatham, Mass., Sept. 11, 1880. It is a young male, and is recorded as the ninth specimen for North America, third for New England and second for Massachusetts. The other two New England specimens were taken, one female at Newburyport, Mass., 1871, and the other female at Upton, Me., 1874, and are in the collection of Mr. William Brewster, Cambridge.

THE SUN AND FULL MOON SIMULTANEOUSLY VISIBLE.—Sir Henry Holland, in his "Collections of a Day's Life," notes with special interest the fact that on one occasion, while sailing upon the Mediterranean, I think (the book is not by me), he saw the sun and full moon at the same moment above the horizon. This occurrence I have frequently witnessed since having attention called to it, and notably on yesterday and this afternoon. The repetition of the phenomenon on two successive days is due to this being the harvest moon. Your readers will doubtless recollect that it is a peculiarity of the moon when full during this month, and in October, to rise for several nights successively with very short intervals between the periods, from which circumstance she is called the harvest and the hunters' moon for those two months respectively. If your readers will observe carefully next month when the moon is at her full, provided the weather is clear, they may see in some localities the occurrence that Sir Henry deemed of sufficient rarity and importance to note in his very agreeable and readable book. Yours respectfully, Cambridge, Md., Sept. 18, 1880. E. G. W.

THE OOSTOONTHES.—A few advance copies of Prof. Marshall's memoir on the Oostoonthes, or toothed fish, of the Cretaceous of Western Kansas, have been distributed by the author. The volume is of the very highest scientific importance, and the mechanical part is done in superb style, making it really a *liere de l'oeil*. We shall take occasion to speak at length of its contents at a future day.

## Fish Culture.

HOW THE FIRST SHAD WERE HATCHED.—Editor *Forest and Stream*: I am quite sure that Mr. Milton P. Pierce, whose letter was published in the *Forest and Stream* of Aug. 26, is making a very good impression in regard to some of the things he wrote about.

I was with Mr. Green at Holyoke a part of the time when he began his experiment there of hatching shad, and know from personal observation what his methods were. Mr. Pierce says that he began to hatch shad in the river, and not succeeding, changed his base of operations to a tributary having colder water, where he succeeded.

Now, this is the exact converse of the actual facts. Mr. Green began by trying to hatch shad eggs as trout eggs had been hatched, viz., in a brook with trout hatching apparatus, that being the only way of hatching fish then known in those primitive times, and the result was that all the shad eggs died, and Mr. Green narrowly escaped a stroke. He became discouraged and was about ready to pack up his things and return home, when the idea occurred to him (how suggested I do not claim to know) of hatching the eggs in the river. The very first experiment in the river water succeeded, and was followed by a continuance of successes, which had their crowning triumph in the invention of the shad hatching boxes.

Without having any desire to enter into any controversy on the subject, I feel as if I ought to say what I have in justice to the originator of shad hatching, who, through his tribulations at Holyoke, succeeded at last in conferring a vast benefit upon the shad-eating people of the world.

LAWRENCE STONE.

U. S. Fishery, McCloud River, Cal., Sept. 23, 1880.

QUINNAT SALMON LAND-LOCKED.—The following note from Mr. N. K. Fairbank, Commissioner of Fisheries for Illinois, tells its own story of the ripening of California salmon eggs in Geneva Lake, Wis., where the fish have been planted. Under date of Sept. 23 he says:

I have sent to-day to Prof. Baird, a very fine specimen of a California salmon, weight 84 pounds, a female, full of well-developed, ripe eggs. She was taken by Mr. Welsch, who has charge of my hatching and ponds here, on Monday last, in the small creek which empties into the lake. The day before he saw seven or eight together, which were judged would weigh from twelve to fifteen pounds each, but had no means of capturing them at that time.

It begins to look like breeding salmon in fresh water, but

I shall not assert it for a fact until I know, but I will assert my belief in it now.

I do not believe that salt enters into, or is any essential element in the problem. I believe that with clear, deep water, and plenty of food and room, the salmon will propagate in fresh water.

N. K. FAIRBANK.

Geneva Lake, Wis.

NEW HAMPSHIRE.—A friend informs us that the Fish Commissioners of New Hampshire have been busy for the past year stocking the waters with land-locked salmon and trout and are now beginning to hear of the growth and success of the former. In many waters. The pike-perch planted in 1876 in Sannep and Massachusetts lakes have reappeared in their progeny, many of which have been captured in those waters after having been given up as lost. Mr. Samuel Welber, one of the commissioners, took nineteen fine salmon in the hatching house at Plymouth previous to July 9, and which time low water has prevented their ascent, but there are hopes that the fall rains will enable another run to go up, as many more have been seen below during the summer in various places along the Merrimack and Penobscot in the deep holes at the mouths of cold spring brooks. The drought in the State has been very severe and many of the smaller trout brooks have been almost dry, and it is fortunate that the commission has breeders enough left to raise 100,000 or more from which to restock the streams.

Our informant says that black bass fishing in Sannep Lake has been excellent all summer and many large fish have been taken.

NEBRASKA.—The Nebraska Commission is working hard with the exceedingly limited means at their disposal, and have 130 German carp which they are keeping for breeders to raise fry for distribution. They are preparing to hatch 500,000 eggs of the quinnat salmon this fall, having planted 190,000 of them last spring from the hatching of the previous year.

## SPRING SPAWNING SALMON—THE GRILSE.

## THE SALMON'S EGG.

THE spring spawning salmon ought to be an object of interest to fish culturists. Hitherto no attempt has been made to propagate from this variety, possibly because the existence of spring spawners in America has not been recognized, although long known to Indians and backwoods men. The nests I saw in July, 1864, on the Miramichi were seven in number, on a small shoal. The eggs, deposited in March or April, would hatch about the first week in August, or later, according to the depth of the snowfall, and the temperature of the water in May or early in June. We do not know that the eggs are deposited in March under the ice—it is probable that this is the case.

A curious question arises as to the present maintenance of the supply of salmon in our rivers. To which class are we to attribute the keeping up of the supply with advancing civilization, and all the changes it brings into the physical characters of the streams? Is it due to the fall spawners, which every one has patronized, or to the spring spawners, which few even recognize? In some cases, I think, there can be no doubt we are indebted to the spring spawners, particularly in Newfoundland, where the practice of barring the rivers in the summer months has so long prevailed; and yet the rivers show a fair supply of fish, but very far from the original wealth.

It is not remarkable that fish culturists have failed to recognize and use the spring spawning salmon, and that, because of this, the spring spawning fish is the worst possible. The woods are exceedingly uncomfortable in March and April from melting snows, the rivers often choked with ice, and full. The whole surroundings of camp life, except the beautiful skies, the breath of spring and the coming birds, are unpleasant. But, considering the poor results from the outlay, it is worth while asking the question whether our fish culturists have not got hold of the wrong fish? Whether the season for depositing the egg, its hatching and the maintenance and protection of the young fry, are not now more congenial for multiplication with the spring spawners than with those whose season is the fall? This is a very important question, and it shows how much we have to learn respecting the habits of the salmon, for we do not yet positively know whether a fall spawning salmon may not, under certain conditions of temperature and food, become a spring spawner, and vice versa.

## THE GRILSE.

The great majority of grilse do not ascend rivers for the sole purpose of spawning. Male grilse are known to mature early, but female grilse, as a general rule, are not spawning fish. Like the herring in its third year, only a very small proportion of grilse are ready to breed. They ascend the rivers as grilse, and return as grilse or immature salmon. This being the case, we ought to catch a great

ratio of grilse than of salmon, because the chances of escape are against the grilse. The salmon going up stream are of two classes: 1st, the breeders, which remain until late in the fall, after all nets are raised, and return as kelts. 2d, the migrants, which stay a short time and return to the sea during the fall when nets are possible. Let us suppose that the number of grilse entering a river be 100, 10 per cent of which are breeders; and of salmon, 100, fifty of which are breeders, and fifty migrants. Ninety grilse and fifty migrant salmon have to run the gauntlet of the nets and of poachers twice—going up and coming down—for both grilse and salmon are caught on the stream side, as well as on the lee side, of nets in a river, but only on the lee side in tidal waters or against the current. The fifty breeding salmon and the ten grilse are safe if they pass the nets, for they return to the sea and the nets are taken up. It follows from this assumption, that the 100 grilse will diminish more rapidly than the 100 salmon, because the chances of escape are against them. Now, what does practice say? The following table shows the catch of salmon and grilse in the sea, at the mouth of the River Dee in Scotland, for thirty-two years, viz., from 1838 to 1870. The averages are for each group of seven years, with the exception of the first group:—

Years.	Number of Salmon caught.	Number of Grilse caught.
1838-1843 (6 years).....	13,789	13,789
1844-1849 (6 years).....	2,905	10,837
1850-1855 (6 years).....	3,425	10,433
1856-1861 (6 years).....	2,946	9,246
1862-1867 (6 years).....	4,353	7,384

The data are from Alec. Jopp's "Inquiry into the causes of the decline in the produce of the salmon fisheries in the Dee and the Don." He attributes the cause to the use of the sea-net and bag nets on the coast.

In the sea the chances were the same for salmon and grilse, and the grilse catch declined to one-half in thirty-two years, the salmon catch increasing. Therefore it is to the river we must look for the chief cause of the decline, where the chances against the grilse are greater than against the salmon.

The following table shows the proceeds of the river fishings for one mile from the mouth of the Dee, after the fish have escaped the sea-fishings in the estuary and along the shore:—

Years.	Salmon.	Grilse.
1838-1843 (6 years).....	3,459	13,250
1844-1849 (6 years).....	5,295	9,246
1850-1855 (6 years).....	1,275	3,514
1856-1861 (6 years).....	250	1,677
1862-1867 (6 years).....	1,493	1,329

The grilse catch fell enormously short in the river, where the chances of escape were less than those of the salmon, because the greater proportion returned, or endeavored to return, to the sea before the nets were raised. Experience, no doubt, had something to do with the less take of salmon, which had learned to wade the nets.

FOREST AND STREAM of Oct. 21, 1879, contains a notice from the Fish Commission of the wretched salmon fishing in the Tay. If we divide the years mentioned into groups of five, so as to get an average, the conclusion we arrive at is that decline is setting in, because the grilse are diminishing in a greater ratio than the salmon. The figures are as follows:—

From 1837 to 1841, 106,368 salmon, 189,483 grilse—salmon catch to grilse catch as 1 to 1.78. From 1842 to 1846, 14,160 salmon, 229,699 grilse—salmon catch to grilse catch as 1 to 1.54.

There appears from these tables that the ratio of grilse to salmon is diminishing in the Tay; and unless protective measures had been introduced, the decline would have been more rapid, and this resulted from a habit of the fish at different stages of its life.

In the river Don, in Scotland, the same results followed in the Cruive fishings, as may be seen from the following table, which extends from 1783 to 1852, a period of seventy-one years (A. Jopp's tables).

Ben trout are added to the grilse catch, but they only serve to mask the more rapid decline of the grilse; they do not affect the general conclusions. The periods are septennial:—

Weight of Salmon in Pounds.	Weight of Grilse and Trout in Pounds.
1783 to 1789.....	22,445
1790 to 1796.....	12,421
1797 to 1803.....	11,041
1804 to 1810.....	55,219
1811 to 1817.....	20,429
1818 to 1824.....	25,449
1825 to 1831.....	6,131
1832 to 1838.....	6,442
1839 to 1845.....	4,529
1846 to 1852.....	4,263
	4,010
	20,125
	21,041
	27,382
	20,881
	18,854
	9,325
	6,702
	4,529
	4,010

We see from this table that in the period from 1832 to 1838 the average catch of grilse was equal to that of salmon; in fourteen years it fell to one-fourth of it, and unless protective measures had been adopted the salmon fisheries of the Don would have been hopelessly ruined. The interpretation I put upon these results, having regard to the different habits of the fish at different periods of its life, is this:—In the river and not in the tidal waters of the sea that one leading cause of the decline must be searched for, and it is probable that it arises from the habits of the fish at certain periods of its life, which gives the grilse less chance for survival than the adult salmon under existing modes of capture. Hence it would appear that if we protect the grilse the salmon will protect itself. These conclusions gather force from the fact that the grilse are far more numerous than the salmon and yet diminish much more rapidly. Give them the same chance by enlarging the mesh of the net so that they can freely pass, and the salmon fisheries will increase. But it is one thing to make a law and another thing to enforce it.

The Field notices the intensely cold winter of 1879 in England in connection with the very bad salmon year. It is a comfort to know that if we compare intensely cold winters in Europe with the salmon catch three years later, we are forced to the conclusion that intensely cold winters there are very favorable to salmon preservation; and three years after an extremely cold winter one may expect (other things being equal) a very good salmon year.

This is a curious and interesting subject of inquiry, and I shall ask for space to advert to it in another communication, closing the present one with some remarks on the egg of the salmon.

#### THE EGG OF THE SALMON.

The foundation of the egg is a wonderful phenomenon. The egg in relation to the milt presents one of the most astonishing spectacles, if rightly viewed, which microscopist and "philosopher" can witness. To those of your readers who have not given any attention to this subject it may be briefly described. (For a full description *vide* Dr. W. H. Dall's paper on the ovum of osseous fishes; translation of the Royal Society, 1869.)

The egg of the salmon is the size of a pea consists of a semi-transparent spherical mass, whose outer external covering is penetrated by a very minute funnel-shaped opening,

termed the micropyle. The milt of the male contains a vast assemblage of exceedingly minute organisms, styled spermatozooids. Perhaps a hundred thousand of these spermatozooids may be equal in bulk to one egg. Taking a minute quantity of milt on the point of a fine needle, and putting it into a drop of water in contact with an egg, the careful observer may witness the following consequences with a good microscope: The number of spermatozooids wandering vigorously round the passive egg, traveling over its surface with considerable activity. Suddenly one reaches the minute funnel-shaped micropyle; it enters, and the mouth of the micropyle contracts. Suddenly, pulsation begins in the egg, a new life has dawned and the micropyle speedily closes. Other spermatozooids continue wandering over its surface. But in fifteen or twenty minutes grow weary, languish, drop off and die. But vivid pulsations continue in the egg, and the new creature is forming. Let us carry the thoughts which may crowd upon us to a further issue. We have had under view two imperfect lives, that of the active spermatozoid and that of the passive egg. But the moment the spermatozoid enters the micropyle a new and a perfect physical life begins, which, as we shall presently see, already possesses absolute knowledge of a special kind, requiring only a short time for its manifestation.

Two of these eggs thus "fertilized" are conveyed far away, say to Australia, these are placed in a river in which salmon had never been. The eggs are hatched, the young fish in due time migrate to a sea of which their ancestors had no experience, and return to a river of which they knew nothing, and where there are no teachings to be gained from the experience of others of their kind. How did they obtain this absolute knowledge of an unknown sea? and whence did they gather the instinct that it was essential they should return to the river in which they were born, at stated periods? Ages of experience in others of their kind were not there to aid them, and migration is said to be the result of experience. It is clear that out of two imperfect lives a new life possessing absolute knowledge—knowledge not gained by experience or teaching—has been produced. Is this to be explained by the formula of words that the instinct which impels the resulting creature to migrate to a sea and return to a river of which its ancestors knew nothing is "an inherited habit?" Or is not the gulf between the imperfect lives of the egg and the spermatozoid on the one hand and the resulting perfect life of the impregnated egg on the other, with its absolute knowledge, infinite to us, passing the power of language to describe, and failing which, we apply to it a formula of words?

It seems to me that the conception which is so often designated as an "inherited habit," is a manifestation of design, infinite in its variety, endless in its future attainments, and crudely spoken of in the too often misleading language of philosophy by the barren term "evolution," which, properly used and interpreted, indicates only a part of design. The possession of absolute knowledge by the embryonic salmon, and all similar cases, is fatal to the materialistic view of evolution. How the results of experience can be conveyed from the parent to the spermatozoid or to the egg—for habit is derived from the female as well as from the male—we may never fully understand, but that it is an effort infinitely beyond the mere "potency of matter" we may adoringly believe.

HENRY YOULE HIND.

#### EEL TRAPS WHICH TAKE BASS—LEGAL DECISION.

OSWEGO, N. Y., Sept. 3, 1880.

FOR years the sportsmen of this vicinity have sought legislation to aid them in protecting the fish and game of this portion of the State from improper and reckless destruction, and many good laws to-day exist upon our statute books as monuments of their earnest labor. But one nuisance still remains, and I desire to call the attention of the lovers of fish throughout the State to the present ineffective law, in the hope that a remedy may be thus brought about. The Legislature of 1879-80 passed certain amendments to the game law as enacted in 1878-9, one being contained in Chapter 531 of the laws of 1880. A portion of Section 2 of this Act reads as follows:—

"No person shall kill or catch, or attempt to kill or catch, any fish except minnows in the waters of Lake Ontario on the American side thereof, \* \* \* or in Onondaga, Oneida, Seneca or Cross lakes, or in any of their outlets or tributaries, \* \* \* in any way or manner, or by any device whatever, except with a hook and line," etc. This portion of the section was especially prepared, and was supposed to be all that was necessary in order to render illegal the eel weirs in the Seneca, Oneida and Oswego rivers, by means of which it is claimed that not only eels, but thousands of black bass are yearly caught. With this idea, the Leatherstocking Club, of Oswego County, directed their attorney to notify the owners of the eel weirs in Oswego River of the existing law, and to demand the removal of the weirs, which he did. The eel fishers refusing to obey the instructions of the club, an action was brought to compel the same, and that action having been, in one form referred to the Hon. Wm. H. Ruger, of Syracuse, a decision was rendered therein by him, from which I quote below:—

"SUPREME COURT—The Leatherstocking Club, of Oswego County, against Lewis Fuller, Jr., and George Montague.

"The above entitled case having been duly referred to me to hear and determine, and I, having heard their proof and allegations, do respectfully report as follows:—

"I find the following points:—

"The plaintiffs are a corporation under the laws of this State, and do business at the City of Oswego, and are duly authorized to bring the above action.

"That during the months of May, June and July of the present year the defendants were engaged in the business of catching eels in the Oswego River by a device known as eel weirs, and caught daily, by such device, from two to five hundred eels.

"That the method of constructing such weirs, and of taking said eels, does not involve the use of a hook and line in catching said eels.

"That the defendants had been in the exclusive possession of said eel weirs and the practice in taking such eels in the manner and at the place aforesaid for the period of thirty-five years at the time of the commencement of this action.

"And I do find on questions of law:—

"1st, That it was not the intention of the Legislature wholly to prohibit the taking of eels by means of eel weirs in all of the fresh waters of the State, for the second paragraph of the section of the statute under which this action is brought either expressly or implicitly authorizes the taking of such fish by such means in all of the fresh waters of the State except

those where such taking is expressly prohibited in the first paragraph of the section, so that it cannot be argued that the prohibition claimed is within the spirit of the enactment, if it be not found in this very letter. See Sec. 23 of Chap. 534 of the Laws of 1879, as amended by Sec. 1 of Chap. 531 of Laws of 1880.

"If the prohibition claimed is found at all it must be embraced within the specified descriptions of places enumerated in the first paragraph of such section.

"It is conceded that the *locus in quo* is not specifically described in such first paragraph, and is not included therein unless it is embraced by the general term 'outlets,' as applied to the said waters of the several lakes, 'Onondaga, Oneida, Seneca, or less,' and the question to be determined is whether the Seneca and Oswego rivers are intended to be described under such general term or phrase.

"The Seneca and Oswego rivers are both large and important streams of water flowing over a large section of territory, having designated and specific names coeval with the earliest history of the country, and repeatedly described in the legislation of the State by such names.

"I cannot believe that it has intended to describe the waters of such rivers by the use of the vague and uncertain phraseology used in the Act in question. To hold otherwise would be to deprive the term outlet of all special meaning, and to confer it upon all of the various channels, both mediate and immediate, by which the waters of a specified body pass in course from their source to their final destination, the ocean.

"The same laws which would make the Oswego River the outlet of Oneida Lake would make each of the following rivers and lakes, viz.: the Oneida, Seneca, Oswego, Ontario and St. Lawrence waters included under the phrase, 'outlet of Oneida Lake.'

"I therefore hold that the acts of the defendants in taking eels from the Oswego River in the manner described is not a violation of the provisions of the statutes.

"2d, The defendants are entitled to a judgment, dismissing the plaintiff's complaint with costs, and the same is hereby ordered.

Wm. C. ROGEE.

"Aug. 14, 1880."

FISH PARASITE.—*Philadelphia, Sept. 7*.—A friend and myself went to see a *M. vis* and saw a net-baits to catch some minnows for my aquarium, and the first catch we made we noticed that they were unusually large around the body, the largest of them two inches long. We took one of these and opened it, and found it to contain a worm about two inches long of a reddish hue and pointed at both ends. It was not in the intestines of the fish, but between them and the body of the fish. We opened another and it had two in it, but not so long as the others. We made another catch and opened more of them, and found they were all the same. When taken out the worm is coiled up in a knot and looks just like a piece of red sewing-thread twisted up with your fingers.

The place where we caught them is a creek which flows from a woods about a mile from where we were and runs into the Schuylkill river through a marsh and a distance of about one hundred and fifty yards from the river. The tide rises and falls with the tide in the river. Is there anything, do you suppose, to cause these worms in the fish in the creek, as the minnows we caught on the other side of the river had none in them? Are they not a parasite, and if in larger fish would it not be injurious to eat such fish? Please answer, and oblige.

THOMAS J. CHADWICK.

A similar parasite was shown at a meeting of the American Fish-cultural Association some two years ago by Mr. H. D. McGovern, who claimed that it went through one of his trout from side to side, thereby killing it.

We do not think such a worm would live through the cooking which fish usually get; or, if it did, it would live in the stomach of a warm blooded animal. As you find them so plenty, why not send some of the fish to the National Museum at Washington, and you will then learn all about them in the course of a few weeks or months, according as other work may press. Then, when you find what they are, send us the account for the benefit of those who are interested in such matters.

RANGLEY LAKES.—Of these famous lakes of Maine, where the brook trout grow up to ten pounds or more, a correspondent writes: "One of the most attractive points of this region is the exceedingly moderate sum of money which one can dispose of during a vacation. It costs but \$12.50 to get from Boston here and back, by way of the Eastern, Maine Central and Sandy River Railways, and the journey is pleasant enough to amply repay one for the outlay in time and money. A stage line or private conveyance brings passengers from the terminus of the railroad, at Phillips, Maine, to Estey's, at the head of the upper, or Rangley Lake, over a road twenty miles in length and peculiarly rich in scenery. From Estey's a little steamer called the Molly-chunk-amun, built and run by C. W. Howard, sails down to the outlet, where the Mountain View House catches all the passengers. Board at the lakes ranges from \$1.50 to \$2 a day in June and September, and from \$1 to \$1.50 in July and August. The greatest rush has always been in June and September, when the fishing is liveliest. But this year the hotels have been full all the time.

"The basins of the Rangley Lakes contain the drainages of about nine hundred square miles of territory, and it is estimated that their waters measure twenty-four million cubic feet. They blend with the ocean through the channel of the Androscoggin River, and are utilized in various ways. At Levison, in this State, they furnish power for manufactories, and in the spring of each year they float millions of logs from off these rugged hills to an eager market on the coast. The seven lakes forming this chain are all navigable, but their names would demoralize any spelling-master in America. They are as follows: Oquossoc, Monseleucmaguic, Capsuptic, Kennebagog, Molchumkamunk, Welokenabacook and Umbagog. Noah Webster would have given one howl of despair and yielded up the ghost had he ever been invited to tackle these fellows. And it is only when I am in particularly robust health that I dare to write them. The woods which thickly fringe these hills and fill the air with scent of spruce and cedar are populated with deer, moose, caribou, black bear and other game, and the hunter over to the shootist's hearts. Within three or four days a caribou has been killed within gunshot sound of this point, and it is no unfrequent thing at any time of year to find venison upon the tables hereabout under the vague title of 'wild mutton.' Hard is to be pleased who cannot find recreation amid such surroundings, and tame must be the heart of him to whom the billows and sand and champagne cocktails of the seashore

are greater joys than the buoyant rest of the mountains, the soft lapping of fresh water wavelets and the balsamic scent of great, deep forests, such as these."

**GROWTH OF CARP.**—A living carp is now on exhibition in the aquarium at Blackford's, in Fulton Market, which weighs one pound and eleven ounces. It is one of a lot sent from the National Carp Ponds at Washington one year ago, which then weighed about two ounces, and were placed in the ponds of Mr. H. D. McGovern, in Brooklyn, where they have since remained.

Mr. McGovern has occasionally fed them with oatmeal dough, but the most of their food was obtained in the pond, and consisted of the roots of sweet flag and water cresses. There can be no possible doubt concerning this growth, which it would have required from three to five years for a trout to have obtained, as previous to this there were no carp in his waters on Long Island. Other specimens in the ponds are said to be even larger, and the citizens of Suffolk County have a chance to see some of them at their fall fair. Oct. 5 to 7, as Mr. McGovern has promised to make an exhibit of them, as well as trout and black bass, in tanks during the fair.

A Tennessee correspondent tells us that where the protective laws have been enforced in his State the game fish have multiplied to a great extent and are quite plenty. The Fish Commission planted 500 German carp of last year's hatch in ponds near Nashville, and they are now on an average two and a quarter pounds in weight; showing that the perfect adaptability to the water and climate of Tennessee, as indeed they have to every other place where they have been tried. The commission of this State deserve great credit for their work from the fact that their Legislature has never given a dime toward defraying the expenses of their valuable labor in restocking the waters, an oversight which we hope the next one will correct. We are pleased to learn that Col. Geo. F. Akers has been reappointed Fish Commissioner for Middle Tennessee by the Governor on the 23d inst.

**FROGS KILL CARP.**—That large frogs devour many small fishes is well known, but that they are destructive to larger ones we think has not been observed in America, where we have frogs greatly exceeding any European ones in size. In the account given below, it does not appear that the frogs actually ate the flesh of the fish, but merely attached itself to it as a sort of parasite until blindness and the loss of the protecting slime resulted in death. We reproduce this translucent observation on this strange habit in order that our carp breeders may be on the watch for a similar action upon the part of our own batrachians. The story comes from a Silesian newspaper, which requests German naturalists to observe a property of the frog, allowed to have been discovered during the draining of some huge carp-ponds upon Count Schaafgotsche's estate of Warmbrunn. Upon transferring the fish from these preserves to baskets, for the purpose of conveying them to tanks wherein they might dispose themselves while their old familiar quarters were being cleaned, it was observed that frogs were clinging to the backs of many of the larger carp. Most of the fish thus heridden were blind, the frogs' fore feet being found firmly fixed to the eyesockets of their victims. Impromptu respecting this strange phenomenon, the chief pond-keeper told our contemporary's informant that, according to his experience, extending over several years, frogs were the deadliest enemies with which carp had to contend, and caused an annual mortality among the fish under his care of from three to four per cent. of their total number. The frogs' object in besetting the carp, he said, was to feed upon the slimy matter that so frequently coats a sort of spiny organ in the back of the fish, and the older fish, and in getting their tiny steeds, which, when blinded, being unable to look out for their food, soon perished of hunger. How tightly these voracious batrachians hold on to their living pastures was exemplified by the pond-master, who picked up a carp weighing two pounds and a half, and held it suspended in the air by one of the hind legs of a frog perched upon its back in the manner above described. Carps thus frog-ridden to death begin to turn yellow on the second day after the parasitical croaker has taken his seat, rapidly waste away, and generally die within a fortnight from the commencement of their martyrdom. In clear water it is pretended that they can espy their nimble foe as he prepares to spring upon them, and by a timely wriggle often escape his attack; but in dim and slimy old ponds, like those of Count Schaafgotsche, they too frequently fall a victim to his saltatory skill and merciless appetite.

**AN ENVOYED FISH HOOK.**—Fort Lewis, *Puget Sound*, Oct., Sept. 20.—While cleaning some Rocky Mountain trout, which we had caught in the Piedra, I felt a sharp object fasten on one of them, and on looking found it to be a large-sized hook, such as the Mexicans and Indians use. It was completely encased in a bag or cyst of skin that had formed around it. Think of an animal living with such a thing in his stomach! Yet he jumped for the fly that caught him, and gave as much play as a fish without so much hard steel inside. Verily fish do not feel pain. The hook and skin are preserved in alcohol. Will you please tell me if there is a paper solely devoted to fishing called the *Sea World and Fishing Gazette*, also the price? FERRIS.

We have not seen a copy of the paper referred to in three months, and hear that it has suspended publication, but whether for lack of support or because the editor's scrapbook was all exhausted, or both, we do not know.

**DETROIT NOTES.**—Detroit, Mich., Sept. 26.—Last Saturday night Hon. John S. Newberry, our sporting member of Congress, his partner and companion in all things, James McMullen, Henry B. Ledyard, General Manager of the Michigan Central Railroad, and Hugh McMillan returned from St. Clair Falls, where they spent little more than a day, and caught (honour be to them) three hundred and twenty-five pounds of black bass, weighing from ten to twenty pounds.

Mr. and Mrs. D. D. Post, of this city, left the Star Island House Saturday morning at 7 o'clock and returned at 3 p. m. with 25 splendid bass, the smallest one of which weighed 4 pounds, and the largest 6½ pounds. The total weight of the catch was 116 pounds. G.

**SHARK KILLING.**—Lieut. Monroe, of the revenue cutter Hamilton, has projected a novel method of taking sharks. Upon a large hook he places a beef liver contained in a net. The hook is attached to a line containing an electric conductor attached to a battery on the boat. In the bait he places a vial of powder, which is connected with the conductor; all being ready he goes on looking, fanning and heaping buckets of sheep's blood and heaves it overboard. The blood mixes with the water, and by its color, or otherwise, attracts the man-eaters, and he is not long without a bite. Once satisfied that

the hook has struck, he explodes the powder in the bottle by the battery, and behold, the shark appears floating on the surface of the water harmless and useless.

—Drowsiness, biliousness, pains and aches and ague, Hop Bitters always cures.

## Game Bag and Gun

GAME IN SEASON IN OCTOBER.

Moose, *Alces americanus*.  
Caribou, *Rangifer caribou*.  
Elk or wapiti, *Cervus canadensis*.  
Red or Virginia deer, *C. virginianus*.  
Squirrels—red, black and gray.  
Hares—brown and gray.  
Beaver, *Fiber zibeticus*.  
Wild Turkey, *Meleagris gallopavo*.  
Pinnated grouse or prairie chicken, *Capidula capidula*.  
Ruffed grouse or pinescent, *Bonasa umbellus*.  
Quail or partridge, *Ortyx virginianus*.  
Sparrow, *Passer carolinensis*.

This enumeration is general, and is in conflict with many of the State laws.  
"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf-bird, phalaropes, avocets etc., coming under the group *Limicola*, or shore birds. Many States permit prairie fowl (pinnated grouse) shooting after Aug. 15.

Woodcock, *Philohela minor*.  
Black-bellied plover, ox-eye, *Squatarola helvetica*.  
Long-billed curlew, *Namurus longipennis*.  
Turnstone, or calico hawk, *Streptopelia talpacoti*.  
Red-breasted snipe, dowitcher, *Macdonaldia gracilis*.  
Red-backed sandpiper, or ox-bird, *Tringa americana*.  
Great marbled godwit, or marlin, *Totanus maculatus*.  
Willet, *Totanus semipalmatus*.  
Tattler, *Totanus melanoleucus*.  
Yellow-shanks, *Totanus flavirostris*.

## ECHOES OF THE "DITTMAR SPORTING POWDER."

INDIANAPOLIS, Oct. 2, 1880.

Editor Forest and Stream:

You have placed the sporting fraternity under profound obligations in your expose of the "Dittmar Powder." You have demonstrated my previous convictions concerning its nature.

H. G. C.

EAST BIRMINGHAM, Mass., Oct. 2.

Editor Forest and Stream:

I was thinking of using Dittmar Powder, but must thank you for telling the truth about it, as Hosca Biglow says: "By Heaven, I like a man who ain't afraid." M. H. R.

Extract from a Private Letter.

I have been astonished to see parties shooting it. Our club tried it well and concluded that it was not safe. I consider that you have done the sportsman of this and no doubt other localities a great favor by denouncing it.

FERNANDINA, Fla., Sept. 27.

Editor Forest and Stream:

Permit me to add my quota of thankfulness for the most able and satisfactory expose of the dangers of Dittmar powder, which appears in your last issue. You may rest satisfied that you will be most gratefully upheld by all good sportsmen for you have opened our eyes to a danger to which many have been innocently exposed.

GRAHAM.

From the New York Star, Oct. 3.

The absorbing topic of conversation in sporting circles at the present time is gunpowder. It appears that several accidents have lately occurred, owing to the use of a nitro-cellulose powder, which explodes by detonation like nitro-glycerine. Mr. Dittmar, the patentee of the powder, is said to have admitted that it was a "gun-buster" at one time, but avers that it is now O. K. Hence the difficulty.

From the Niagara Falls Gazette, Sept. 29.

The "Dittmar Sporting Powder" is the subject of a leading editorial article in FOREST AND STREAM of September 23. The pretensions of Mr. Carl Dittmar are thoroughly exposed, and the dangerous nature of the compound he manufactures fully explained. The sportsman who uses the Dittmar powder does so at his peril. At least it would be to his advantage to read the fourteen column article on this subject in FOREST AND STREAM. The editor is entitled to the thanks of all sportsmen for his thorough exposure—it is a settler. The sportsman who discards the old and reliable gunpowder for the Dittmar is a foolish man, liable at any time to pay the penalty in bursted gun and mutilated hand.

PHILADELPHIA, Oct. 2.

Editor Forest and Stream:

I have just finished reading the Dittmar powder article, and if the powder is not "squelled out," why all I have to say is, it is hard to squelch. I have used the stuff to a small extent, but never liked it. I had a few shells that have been loaded more than a year with the Dittmar mixture, but when I read the communication that Sulton & Morehouse sent to H. C. Squires in reference to shells that had been loaded some length of time, I immediately looked over my box and laid out all the "D" shells, and having occasion to go down the river this morning I took them along, and when I reached a point in the channel between the Shore Buoy and Red Bank, where the chart gives us forty-three feet of water, I consigned the entire lot to a grave whence they will never be resurrected. So much for Dittmar powder. C. C.

NEWARK, N. J., Oct. 4.

Editor Forest and Stream:

I cannot resist the impulse to write you my hearty thanks for your articles exposing the dangerous nature of the Dittmar powder. As one who is devoted to fishing, and one who occasionally fires a gun, I would say that I depend to a great extent upon the current literature relating to the latter for any knowledge pertaining to firearms. As such I should undoubtedly use and continue to use the Dittmar powder had not your truly public spirited article informed me of my danger. I detest flattery from the bottom of my heart, but must say I admire the enterprise and pluck of editor and proprietors, which cannot be otherwise then praised and indorsed by every true sportsman. W. L. SINKLE.

BRIDGEPORT, Conn., Oct. 1.

Editor Forest and Stream:

Allow me to compliment you on your able and effective article of last week concerning Dittmar powder. I have distrusted and considered it a dangerous compound since I saw a rifle barrel weighing nine pounds burst into small fragments by a charge not exceeding in bulk 70 grains of black powder. Mr. Sale, the owner of the gun, narrowly escaped injury, one piece passing through his hat. He wrote in the

company threatening to sue for damages, but beyond a promise that the matter should be investigated, never got any satisfaction. I believe I wrote you at the time, stating the facts of the case, but have forgotten the date. I consider your expose of the powder and its manufacturer not only justifiable, but a great benefit to all sportsmen and others who have occasion to use explosives, as I believe that any one using it continually will sooner or later meet with an accident. I also think that these sentiments concerning the course of FOREST AND STREAM in the matter are the sentiments of sportsmen generally throughout the United States. Am uncertain as to which of the numerous Dittmar powder companies manufactured the powder which caused the accident of which I speak. S. H. H.

## FLORIDA SHOOTING.

FERNANDINA, Fla., Sept. 27, 1880.

Editor Forest and Stream:

Thinking that I might interest you and your readers with a few items of sporting news from this location, I have concluded to address a few lines to you, hoping at least to convey our most hearty assurances of esteem and good will.

Our gun club has not made much progress, I am sorry to state. We organized, elected officers and adopted constitution and by-laws, and purchased a Carlin's rotary trip, with a good supply of glass balls, but as yet no shoot has been had. However, among our number we boast of some very good shots, whose reputation extends over the State. Around Fernandina the sport is not as good as in other portions of the State. This may be explained by the fact that Fernandina is located upon an island, and there are so many potholes and negroes with old muskets that the birds are kept pretty well killed off. Then, too, at the meeting of our last Legislature the game laws of this State were entirely abrogated, much to the disgust of all true sportsmen. The consequence is that all game has been sacrificed. The greatest evil we apprehend is from the negroes, who trap the quail in most numerous numbers. We hope to secure legislation upon this very important matter at the meeting of the next Legislature, which convenes in November next. The main object of our organizing a gun club here was to endeavor to have proper game laws enacted, and we intend to accomplish it at all hazards.

We have very good snipe shooting from December to February near our city. Large numbers of the English snipe come upon our inland marshes, and afford most excellent sport. By taking the train to H. L., and crossing the water, the quail grounds are as would be possible to visit within ten or twenty miles of Fernandina. I went out last winter and secured some very fine bags. Each day not less than thirty, and often over fifty were killed over my Gordon setter Dandy, whose pedigree is well known in your State. I am a native of Florida, and have hunted in many of the counties of the State, but for quail shooting, my native county, Jefferson, and her sister, Leon, surpass all others for this sport. For accommodations can be had at Monticello, Fla., the county seat of Jefferson, and at Tallapoosa, the capital of the State. In Leon County can be had facilities for enjoying the finest of quail shooting, and here also can be had as good duck shooting as the best and most fastidious sportsman could desire. In Wakulla County, adjoining Leon, I have had as fine deer and turkey shooting as is possible. The only drawback to the sport there is the meagre accommodation offered to the sportsman, the land being owned by one man, and from places. In Tallapoosa and Monticello may be found gentlemen whose merits are soon realized as sportsmen when they are seen in the field, and to whom brother sportsmen in "good and regular standing" may always go, and be assured of a friendly reception and every courtesy extended for the furtherance of their pleasure. Any of your readers who intend visiting Florida this winter will find it to their advantage to try the regions named above, and they will most decidedly that the quail shooting is good beyond doubt. If any sportsman should pass through our growing and prosperous city, and make themselves known to our club, they will be kindly dealt with. GRAHAM.

A FLORIDA CRUISE.—Pineles, Fla.—If there be three or four of your readers, "jolly fellows," fearless as the ancient Nim himself, having good pieces, and being good shots, who for the sake of a little extra fun would come all the way to Florida and engage the services of myself and friend, Thomas B., we will agree, on slim salary, to furnish a nice yacht and sail down South among the solitudes of land and sea, and the best sport we can give in water, where we can fish and hunt to our heart's content. The finest fish, the noblest game, besides the beautiful birds of our tropics, and the rarest sea shells from our waters will be our allurements. Our programme will be to scour the coast, and if not satisfied, to quit our boat when we get away down and take an oxcart for the interior. We will find bears, panthers, wild cats, catamounts, wild hogs, deer, turkeys, ducks, etc., besides, we will visit the islands named above, and the user will find Charlotte Harbor there is a species of panther called Mexican lion, and we are particularly anxious to "thin out" these fellows! I will not go into details of this hunt, but will assure our friends that the Gulf coast at the season chosen, from 1st of Nov. to 1st of Dec., will be delightful beyond the power of this pen to express. While it will be too warm for frost, it will be cool enough for one to tramp without fatigue, the insects will have not yet begun to annoy, and the user will find the sea shells and curiosities washed up by the late gale will be cured, and mullet will be full-roed! Come, get ready. Write me for any further information or particulars. The cruise will cost \$150—this is hire of suitable boat, guides and provisions; four real "go easy" fellows to share expenses. Yours for the trip, Wm. P. NELSON.

THAT NEW JERSEY WOODCOCK LAW.—Bloombury, N. J., Sept. 28.—September has come and almost gone, and only one woodcock seen or shot in this vicinity. During June and July they were in sufficient numbers to insure sportsmen fine shooting, but in August not one could be seen. Not a gun has been fired on or near the water place, and the user will find the sea shells and curiosities washed up by the late gale will be cured, and mullet will be full-roed! Come, get ready. Write me for any further information or particulars. The cruise will cost \$150—this is hire of suitable boat, guides and provisions; four real "go easy" fellows to share expenses. Yours for the trip, Wm. P. NELSON.

New York.—*Mornellsville, Sept. 27.*—Plenty of ruffed grouse and black and gray squirrels are being killed here now. On the 23d a huge flock of crows passed over this place. They were over three-fourths of an hour passing. There must have been 20,000 in the flock. They did not fly like pigeons, but were from fifty to two hundred feet apart.

(GEORGIA.—*Americus*, Oct. 1.—Our game birds (Bob White) are abundant. I never saw more of them. Our climate is delightful in fall and winter, and *Americus* furnishes board good and cheap, and if any of your Northern sportsmen who come South will make this a stopping point, we promise them as fine shooting as the country can afford, and as hearty a welcome as Southern hospitality can give. I've been out to-day for the first time; two guns bagged fifty. SNOO.

FOREST AND STREAM GENERAL PASSENGER DEPARTMENT.  
—Chicago, Ill., Sept. 26.—The following persons have recently passed through Chicago en route to sporting regions on the line of the Chicago & Northwestern R'y: Chas. Bullock, Turset Ellis, W. S. Arnauld, Jas. H. Hall and E. S. Tobey, all of Massachusetts. They go to the Maple River Valley.

**MIDWAY SHOOTING CLUB.**—The Midway Shooting Association, of Matawan, N. J., was organized in 1875, and chartered in 1880. The club now owns a fine plot of ground, some fourteen acres, at the junction of the O. R. R. and F. & N. Y. R. When the contemplated improvements of this property are completed, the grounds will make one of the finest shooting parks in the East.

CHICAGO, Sept. 30.—I have just returned with R. P. Flowers and party from N. Y. We had a splendid time and plenty of game. We were up at Grand Forks and Alsop, Dakota, and Adrian, Minnesota. Killed 755 chickens and ducks.

S. H. TIMPES.

**WILD PIGEONS.**—*Tolland Co., Conn., Sept. 29.*—Pigeons are scattered over this county in great numbers feeding upon the white oak acorns. Bags of 20 to 40 or more for a day's shooting of two guns are common. The pigeons have not been so plenty here for many years.

—Hop Bitters gives good digestion, active liver, good circulation and buoyant spirits.

SHOOTING MATCHES.

NEW YORK.—Regular semi-monthly shoot of the Miner Rod and Gun Club, Sept. 30, for the club medal presented by Capt. Aery; and also for a handsome badge donated by Judge Tinkel, both

prizes going to the first man; Hurlingham rules:	
Hoffman.....1 0 1 1 1 1 1 0-8	Engelert....1 0 1 1 0 0 1 1 1 0-4
Stiehrs.....0 1 0 0 1 0 1 0-4	Aery.....1 1 1 0 1 1 1 1 1-3
Davis.....0 1 1 0 1 1 1 1-3	

Both medals were captured by Captain Aery.

Holman.....	1 1 0 1 0 0	1-5	Engelert.....	1 1 1 1	0 0 0 1

ALCOQUIN CLUE.—Grounds at Wehauken, Sept. 27.—Semi-monthly shoot for club badge; 20 balls: Auld, 12; Hill, 12; Griswold, 14; Murphy, 6; Loughrey, 15; Bremner, 15; Sauer, 15; Burns, 14; Robertson, 8; Gordon, 11; Hanna, 16; Moylein, 12.

CAPITAL CITY GUN CLUB.—Washington, D. C., Sept. 30.—This club has been shooting a series of weekly matches (not to exceed eighteen) of twenty balls each, for two gold medals, to be known as first and second champion medals, the winners in each match to wear the same until beaten; and a member was required to shoot in at least thirteen of the matches to make him eligible for final prize day, the awards to be made on September 30th.

possession, the awards to be made on percentage of hits. The shooting closed yesterday with the sixteenth match, Mr. Millard being third in the lead, which could not be overcome by a decided effort on the part of Mr. Woodbury, the only other possible winner, having been called away to attend to business to complete his score. As shown by the scores, but for the members who shot the required minimum of 200 balls, but I give the result of the other shooting to show the general average and what our club is capable of doing. The average of 1874 we consider quite creditable for amateurs, many of whom had never shot from a rotary trap until this season, and some of them had never shot from any trap.

whatover. The trap was a Card rotary, screened; handicap rise, as shown below:

Benj. F. Clark won the first prize, Eugene S. Whitney the second, Oliver Greeley the third, and the fourth was divided between Dr. J. W. D. McDonald and Alfred Walker.

SEDLAIA, Me., Sept. 25.—The Sedalia Shooting Club held their first prize shoot, Saturday, Sept. 18; 18 yards rise, Mole trap, 20 glass balls each:

Sned.....	1	Parmelee.....	13
Smith.....	1	Yold.....	13
Habeck.....	1	Kumm.....	13
Hobson.....	1	Trudell.....	13

Parmelee was awarded the cup.

On the 25th the club had a competitive shoot, same conditions, resulting as follows:

Highlyman.....	13	Messory.....	10
Yold.....	14	Trader.....	16
Harker.....	16	Montgomery.....	15
Parmelee.....	16	Sned.....	14

The club is rapidly improving, and hopes soon to be able to report 18 out of 20.

PORTLAND, Me., Sept. 30.—At the tournament of the Maine Sportsman's Association, Pomeroy, of the Androscoggin Club, Lewiston, won back the diamond badge, and, it being the third time, he has the right to hold it. The second prize, a double-barrelled breech-loading fowling piece, was won by Winthrop S. Jones, of Peaks Island; third prize, \$22, C. L. York, Riverside Club, Brunswick; fourth prize, 250 pounds shot, to H. O. Harmon, of Forest City Club, Portland; fifth prize, \$13.75, J. F. Randall, Peaks Island Club, Portland; sixth prize, half a case of powder, F. Jorris, Androscoggin Club of Lewiston; seventh prize, \$8.21, M. L. Brackett, Peaks Island Club, Portland.

Swapsales, the first prize, \$9, was won by Benjamin J. Willard, of Peaks Island Club, Portland; second prize, \$5.80, to A. W. West, Forest City Club, Portland, and third prize, \$3.20, to P. Jerris, Androscoggin Club, Lewiston.

CHICAGO, Oct. 1.—The second match between the Austin Gun Club of Austin, and the South End Shooting Club of Chicago, took place at Grand Crossing, Wednesday last. The conditions were: fourteen men on each side, wild birds, 25 yards rise, from plunge traps. A strong wind prevailed, which greatly assisted the birds in getting out of the way. The Austin Club killed eighty, the South End sixty-eight. This was the second match of the series, the first score being 109 to 107 in favor of the Austin Club.

BROOKFIELD, Mass., Oct. 1.—The Sportsman's Club have a union shoot next week at the Park, and have invited clubs from Spencer, North and West Brookfield, Ware and Palmer. Each town is to furnish a team of at least ten, who shoot team against team. All other members of the different clubs will also have a chance to shoot at the regular string of 90 balls. The shooting begins at 10 A. M., and, if a fine day, a large crowd is expected, and a good day's sport anticipated.

LEAVENWORTH, Kan., Sept. 29.—The Leavenworth Gun Club held its regular shoot yesterday afternoon on the reservation. Each man shot at ten stationary and ten rotary balls:

E. Haberlein.....	17	J. F. Schmeizer.....	8
A. Werber.....	16	El. Combs.....	6
D. B. Hinman.....	16	A. Lange.....	6
W. C. Hinman.....	16	Scott Lee.....	17

W. C. Hinman won the champion medal with 19 out of 20. He used an army musket. E. Haberlein and Scott Lee tied, and Haberlein won the second prize. Ed. Carney won the leather medal.

October 1.—The Leavenworth Gun Club had its shoot yesterday on the fair grounds as advertised, each member shooting at ten stationary and ten rotary balls, thrown from two "Monarch" traps:

H. Haberlein.....	18	A. Werber.....	12
W. C. Hinman.....	19	B. C. Hinman.....	9
L. W. Spratley.....	19	Chas. Schmeizer.....	19
D. B. Hinman.....	18	Chas. Schmeizer.....	19
J. W. Spratley.....	18	G. Geo. Berger.....	13

W. C. Hinman won first prize (a Monarch trap, donated by Culver Bros., valued at \$10). E. Haberlein and D. B. Hinman tied on 18 balls; Hinman won second prize in shooting off the tie, breaking 5 straight, and Haberlein 4. Chas. Schmeizer and Chas. Magoo tied, which was not settled. After the glass bird match was over, some members of the club had a swapsale upon which, which J. W. Spratley won first money, and W. C. Hinman second.

SACRAMENTO, Cal. Sept. 24.—The shooting tournament, under the auspices of the Forester Club of this city, which opened Tuesday, has passed most pleasantly, and free from anything to mar its complete success. Nearly every section of the State was represented. Entries were made of clubs at Colusa, Franklin, Roseville, Willys, Placerville, Colusa, San Jose, San Francisco, Chico and other parts of Butte county, Cloverdale, Georgetown, Newcastle, Vacaville, Pilot Hill, Napa, White Rock, Sheldon, and from other points, in addition to those from this place. Forty-five contestants took part in the shooting. The conditions were fifteen birds each at 21 yards rise, using three plunge traps of the H. & T. pattern. J. N. Burnett and Geo. Rottier tied for first prize in 15 straight, and shot off the tie at 6 double birds, 18 yds., Rottier winning with clean score. Among seven ties on 14 P. D. Brown won the shoot off with a clean score of 18 double birds at 18 yds., the tie of four being shot off and the prizes awarded. Scott, Todd and Zaves divided 4th, 5th and 6th; W. E. Gerber, 7th; Lopes and Wentworth, 7th and 8th; Schnabel and Thiel 10th and 11th; Derr, 12th; Parrot, 13th; Beside, 14th; King, 16th; Chapman, 16th, and Meyer Ernest 17th and 18th. A supplementary match for a case of birds was held under novel conditions. Each shooter started to walk from the 33 yd. score, and while between that distance and the 28 yd. score the trap was sprung.

OCCIDENT.

PUBLISHER'S DEPARTMENT.

THE AUTOMATIC REVOLVER.—Messrs. Merwin, Hubert & Co., 88 Chambers street, New York, make to the readers of this paper a valuable offer for their three-plunge traps of the H. & T. pattern, advertisement in another column. The weapon is perfection of workmanship, and will be highly prized by every purchaser.

DUCK SHOOTING.—One-half the shooting in and of the best clubs of six members in California, N. C. 16th this season with boats and dogs. Splendid chance; no better; canvas-back shooting. Address Box 2, 765, Boston.

The Holabird Shooting and Fishing Ship. Upthegrove & McLellan, sole manufacturers, Valparaiso, Ind. Send for circular.

—See advertisement of gold fish for sale.

## The Kennel.

—Address all communications to "Forest and Stream Publishing Company, New York."

## FIXTURES.

St. Louis Kennel Club, St. Louis, Mo., Oct. 5th, 6th, 7th, and 8th.  
Pennsylvania State Field Trials Association Trials, Lancaster, Pa., Oct. 15th, 27th, 28th and 29th. J. R. Stanyon, Secretary, Pittsburg, Pa.

National American Kennel Club's Second Annual Field Trials, Vincennes, Ind., Nov. 15th. Chas. De Ronge, Secretary, 51 Broad street, New York.

Eastern Field Trials Club's Second Annual Trials, Robins Island, Peconic Bay, L. I., Nov. 29. Jacob Pentz, Secretary, New York.

ST LOUIS SHOW.—As we go to press the St. Louis Bench Show is in progress. A full report of the same, with list of entries and winners will appear in our next issue.

NAMES OF DOGS.—Correspondents are requested to exercise care in writing names claimed and other kennel notes. Remember that it is very easy to misunderstand communications of this kind unless they are written plainly and explicitly. The editor would prefer rather to read a page of manuscript in order to understand exactly what the writer means to say, than to puzzle over a brief note in which the names of owner, sire, dam, former owner, etc., are bunched in a conglomerate and undecipherable mess.

Advertisers are respectfully requested to print names of dogs.

PENNSYLVANIA FIELD TRIALS.—We have received a neatly printed little book containing the Constitution, Laws and Rules of the Pennsylvania State Field Trials Association. The rules of the club specify that:

A dog to be eligible to run in the field trials of the association must have been owned in the State of Pennsylvania at least three months prior to the date of the commencement of the trials. A puppy whelped on or after April 15 of the previous year shall be eligible to run in the puppy stakes, and one whelped on or after October 15 shall be eligible for the nursery stakes.

The rules for the field trials are made up with slight alteration from both the National American Kennel Club and Eastern Field Trials Club recently published in FOREST AND STREAM, and in consequence it is not necessary to reproduce them in full. The principal changes alluded to occur in Rule 5, and in the "instruction to judges," under the heading of False pointing, the paragraphs read as follows:

RULE 5. Positive points for merit: Pointing, 35; pace, 15; backing, 7; style, 6; staunchness, 8; ranging, 5; quartering, 8; obedience and disposition, 6; retrieving, 10; total, 100. Negative points for demerit: False pointing, 1 to 5; breaking in (each offense), 5; breaking shot (each offense), 5; chasing or breaking shot and chasing (each offense), 12. (False pointing)—The judge shall give a dog ample opportunity to discover whether or not he is on a true point, and the penalty shall range from 1 to 5 for his acts throughout the heat.

Mr. J. R. Stanyon, Secretary, telegraphs us that the following gentlemen have consented to act as judges: Mr. B. F. Wilson, of Pittsburg, Pa.; Mr. J. M. Taylor, of Lexington, Ky., and Mr. Washington A. Coster, of Flatbush, Long Island.

A VALUABLE PRESENT.—Mr. T. T. Sawyer, Jr., of Boston, Mass., has just returned from England, bringing with him a young fair terrier bitch, which was presented to him by Mr. Hugh Dalziel. She was bred by Mr. Arthur A. Easton, of Hull, England, and is in every respect one of the finest of her breed in America. "Jumping Jenny," as she was named by Mr. Dalziel, has white body and head evenly marked with black and tan. She is by Champion Gaffer, 6,942, E. K. S. B., out of Champion Gerty, 7,004, E. K. S. B. Her sire, Gaffer, has won thirty-two first prizes, and her maternal grand sire and grandson, Buffett and Gally, were sold at Darlington show for £350.

WESTMINSTER KENNEL CLUB IMPORTATION.—Mr. R. B. Summerson is about sending over his pointer bitch, Polly, by his Champion Shot, to the Westminster Kennel Club. Polly will have plenty of opportunities of showing her excellent working qualities this autumn, and in the spring she will be ready for Senation.

REX.—Mr. Fisher Howe, Jr., writes us that his pointer Rex is doing fairly well. Within the last few days he has begun to rest a little on his foot, and has recovered heart enough to bark once or twice.

ESSEX COUNTY HUNT.—Meets for October, 1880, at 3:30 P. M., each fixture: Saturday, October 9, Verona Post Office. Wednesday, October 13, Llewellyn Park—Gate, Eagle Rock Road. Saturday, October 16, Mountain House, Montclair. Wednesday, October 20, Residence C. H. Heckscher, Esq., Orange. Saturday, October 23, South Orange. Wednesday, October 27, Mansion House, Orange. Saturday, October 30, Caldwell.

ELORO AND ROSE.—Dr. Wm. Jarvis, of Claremont, N. H., has forwarded to us a neat little pamphlet containing the pedigrees, public performances, etc., of his celebrated red Irish setter, Champion Eloro and Rose. The little book also contains a full history of this race of extraordinary setters, whose winnings have been so often recorded in these columns.

We will take pleasure in giving all inquiring readers information concerning this famous strain.

—Mr. Hugh Dalziel has recently accepted the kennel editorship of the *Fanciers' Chronicle*.

—Mr. Jefferson Cooper, of Blauveltville, N. Y., is at Milford, Neb., with three of Dr. S. Fleet Spier's dogs.

—Mr. Zachary Taylor, of Northumberland, Pa., is at Lincoln, Neb., with one dog.

## THE ENGLISH SETTER.

FROM VERO SWAN'S ILLUSTRATED BOOK OF THE DOG.

(Reprinted from advance sheets forwarded to the FOREST AND STREAM, and to the author, through the courtesy of Messrs. Cassell, Peter, Galpin & Co., Publishers.)

WHATEVER the origin of the setter may have been, there can be no possibility of a doubt but that he holds a position second to none in the canine world in the present day. The beauty of the dog's coat and the brilliancy of his colors, coupled with his use and intelligence in the field, cannot fail to make the setter a favorite with all who really admire and love a good dog.

Another important feature in connection with the setter's popularity, and which has been no small support to it, is the amount of national jealousy and prejudice which has been from time to time imported into discussions on the breed, as, naturally enough, each variety in existence finds keen supporters among his fellow countrymen. To explain our meaning we must at once allude to the fact that in the present day setters are divided into three distinct varieties—viz., the English setter, the Irish setter and the Gordon setter. This latter breed is recognized as the Scottish national setter, its origin being traced to Gordon Castle, Aberdeenshire, and will, with its Irish relative, be fully alluded to later on in this work. There was an old Welsh breed, too, of black-and-white setters which is almost extinct, though frequently partially alluded to by veteran sportsman hailing from the Principality in question.

In various localities throughout the country families or strains of setters from special lines adopted in breeding, doubtless with the object of producing the dog best suited to the specialities and peculiarities of the country over which they were to be worked—assumed peculiarities distinguishing them from each other and became known by special names, such as the kennels which became known for breeding good ones. The Earl of Carlisle has a strain, specimens of which have occasionally been shown, and which display strongly marked Spanish characteristics, and from the tendency to curl in the coat, the top-knot more or less developed, and their general shape, suggest them having been grafted on the Water Spaniel. In the Marquis of Bute's kennels in the west of Scotland there was long, and probably is, a strain of black setters, and numerous kennels of extent had strains specially their own and some distinguishing feature. The Beltons, famous in the northern counties, are a superb race, and form the great basis of the now famous Laverack Setter, on which again is founded the majority of the great kennels, so favorably known throughout the country, and which has an immense popularity with American sportsmen.

Whether any of the modern and present-day breeders have resorted to a spaniel cross direct we are not in a position to state, but that such might be done with advantage in some instances we do not doubt.

In spite, however, of the numerous families into which the setter is now divided, there can be no doubt that the origin of each was the spaniel, and it is a curious subject for contemplation that Spain (as will be seen in the chapter on pointers) should have the credit of supplying us with the three breeds of sporting dogs—spaniels, setters and pointers—upon which we English so greatly pride ourselves. The credit of improving these dogs is of course our own, but it is impossible to claim any one of them as indigenous to this country, closely identified with it as they are at the time of writing.

Dr. John Cains alludes to the setter in his work on "English Dogs," under the title of Index, and his classification of it with the spaniel is convincing proof of its identity with that animal at the period in which Dr. Cains wrote as follows: "Another sort of Dogges be there, serviceable for fowling, making no noise either with foot or with tongue, while they follow the game. These attend diligently upon their Master, and frame their conditions to such becks, motions and gestures as he will please him to exhibit and make either going forward, drawing backward, inclining to the right hand, or yielding toward the left. (In making mention of fowles my meaning is of the Partridge and the Quale) when he hath founde the hyrde, he keepeth sure and fast silence, he stayeth his stepes and will proceede no further, and with a close, covert, watching eye, layeth his belly to the ground and so creepeth forward like a worme. When he approacheth neerer to the place where the hyrde is, he layeth him downe, and with a shake of his naves, betrayeth the place of the hyrdes last abode; whereby it is supposed that this kinde of dogge is called *Index*, Setter, being in dede a name most consonant and agreeable to his quality. The place being knowne by the meanes of the dogge, the fowler immediately openeth and speedeth his bet, intending to take them, which being done the dogge at the accustomed becke or usual signe of his Master riseth vp by and by, and draweth neerer to the fowle that by his presence they might be the authors of their owne fowling, and be ready intangled in the prepared net."

The above extract, though not throwing much light upon the appearance of the breed in the reign of Queen Elizabeth, nevertheless is a proof of its existence; but the following remarks taken from Gervase Markham's "Hunger's Prevention, or the Art of Fowling," which was published in London in 1635, gives a considerable amount of information upon the dog's character and the uses to which it was then placed. Under the heading of "What a Setting Dog is" Gervase Markham writes:

"Before I wade further into this discourse I show you what a setting dogge is. You shall then understand that a setting dogge is a certaine lusty land spaniel taught by nature to hunt the partridges before, and more then any other chase whatsoever, and that with all eagerness and hercesse, running the fields over and over so lustily and busily as if there were no limit in his desire and furie; yet so qualified and tempered with art and obedience, that when he is in the greatest and eagerest pursuit, and seems to be most wilde and frantike, that yet even then, one heem or sound of his master's voyce makes him presently stand, gaze about him, and looks in his master's face, taking all his directions from it whether to proceede, stand still, or retire. Nay, when he is come even to the very place where his prey is and hath as it were his nose over it, so that it seems hee may take it up at his owne pleasure, yet is his temperance and obedience so made and trained by arte that presently even on a sudden he either stands still or falls downe flatte upon his belly, without daring once to open his mouth, or make any noyse or motion at all, till that his master come unto him and then proceeds in all things according to his directions and commandments."

This quotation might almost have been taken from a modern work on setters, as it refers to a class of dog whose duties in the field appear to have little altered during the progress of time. There still seems to have been a considerable looseness in the classification of this breed of dog, and the barrier be-

Sportsman," in which a good deal is said about the setting dog, and sporting in general. The "Compleat Sportsman," which was published in the *Savoy*, London, was dedicated to Sir Charles Keymis, of Keven-Mabley, in the County of Glamorgan, Bart., and may be taken as having been a valuable handbook relating to the laws on sport and dogs at the time when it was written. Mr. Giles Jacobs, however, copies unblushingly from Nicholas Cox, without giving the latter any credit for what he has taken from his works, and the result is that the description of the setting dog which we have quoted above is reproduced in the "Compleat Sportsman." It is, therefore, only reasonable to infer that no change, or, at all events, any material change, had come over the dog during the interval which had expired since Nicholas Cox wrote, or it would probably have been alluded to by Giles Jacobs in his work.

It may be here mentioned in justice to the individual to whom the credit is due, that Robert Dudley, Duke of Northumberland, is supposed to have been the first person to train setting dogs in the manner which has since his time been universally adopted by his successors. His Grace lived about the year 1550, rather earlier than the date at which Dr. Cains wrote, but beyond casual references to him by subsequent writers, nothing is positively known of the system upon which he acted, though from the remarks made it is probable that his ideas were closely carried out by the setter breakers who came after him.

The "Sportsman's Cabinet," in 1803, devotes a good deal of its space to the subject of setters, which had evidently by that time taken their rank as a distinct breed of sporting dog. Whether, however, the author is quite correct or not in his assertion that "The dog passing under this denomination [setter] is a species of pointer originally produced by a commixture between the Spanish pointer and the larger breed of English spaniel," will always be a matter of discussion between persons interested in the breed, as many are to be found who deny the existence

of the pointer cross. This subject may, however, be abandoned for the present, as our desire is now to trace the existence of the English setter from its first appearance down to the modern periods, and at the same time draw what deductions we can from contemporary writers concerning its appearance and value as a sporting dog. Mr. W. Taplin, in the "Sportsman's Cabinet," proceeds to remark subsequently to the preceding quotation, that "The sporting department of a setter in the field precisely corresponds with the pursuits and propensities of the pointer, but with this single variation, that admitting their olfactory sensations to be usually exquisite, and that one can discover and as expeditiously receive and enjoy the particles of scent (or, in other words, the effluvia of the game) as readily and at equal distance with the other, the difference of the sports in which they are individually employed renders it necessary that one should effect upon his legs what the other does by prostration upon the ground, in the very position from which the present appellation of the 'setting dog' is derived. And these are neither more nor less than the pure effect of sporting education; for as in shooting with the pointer

DOGS AND PARTRIDGES (After Desportes).

tween the setter and the spaniel appears to have been unremoved at a much later time, and the name setter applied only to dogs broken to set game, and not to those distinguishable by any structural difference in shape or build. In 1697 Nicholas Cox writes of the setter in "The Gentleman's Recreation" in the following words:

"The dog which you elect for setting must have a perfect and good scent, and be naturally addicted to the hunting of feathered game; and this dog may be either land spaniel, water spaniel, or wauget of them both: either the shallow-bowed bond, tumbler, lurcher, or small bestard mastiff. But there is none better than the land spaniel, being of a good and nimble size, rather small than gross, and of a courageous metal; which tho' you cannot discern, being young yet, you may very well know from a right breed, which have been known to be strong, lusty and nimble runners, of active feet, wanton tails, and busie nostrils, whose tail was without weariness, their search without changeableness, and whom no delight did transport beyond fear or obedience."

With reference to the behavior of this dog in the field, Nicholas Cox remarks as follows in his notes on training the setting dog:

"You must teach him to come creeping to you with his belly and head close upon the ground, as far or as little away as you think fit. \* \* \* And this observe in his creeping to you, if he offer to raise his body or head you must not only thrust the rising part down, but threaten him with your angry voice, which if he seem to slight, then add a sharp jerk or two with a whipcord lash. \* \* \* If you walk abroad with him, and he take a fancy to raise, even when he is most busie speak to him, and in the height of his pastime make him fall upon his belly and lie close, and after that make him come creeping to you."

Thus Nicholas Cox succeeds in clearly proving that late in the seventeenth century the spaniel, or even a mongrel partaking of any breed, was used as a setting dog by British sportsmen. Things do not appear to have undergone any great alteration in the beginning of the next century, for in 1718 one Giles Jacobs produced a book called the "Compleat

the game is constantly expected to rise, so in the use of a setting dog and set the game is required to lie. \* \* \*

"Although the setting dog is in general used merely for the purpose of taking partridges with the draw-net, yet they are sometimes brought into occasional use with the gun, and are equally applicable to that appropriation, except in turnips. French wheat, standing clover, ling, furze, or other covert, where their sudden drop and point may not be so readily observed."

Personally we attach very great importance to the above extract, for two reasons: First, it is distinctly stated that up to that time Pointers were the fashionable, or rather the favorite, breed with sportsmen who amused themselves by shooting three-quarters of a century ago. Second, it gives us a good reason for the change which has come over the setter's behavior in the field of later years. It is, of course, perfectly well known that the modern setter usually points his game standing up, as a pointer does, and the abandonment of netting is unquestionably responsible for this alteration in the method of a Setter carrying out his work. Before, when the sportsman was anxious to net as many birds as possible, it was most essential that they should be as undisturbed as possible, and the presence of a dog would, of course, increase the chances of their being frightened away before the net was fixed for their capture. The chances of the dog being seen by the game was naturally lessened when he lay down, and this, no doubt, was the reason for him being broke to do so. Now things are much altered, and the sportsman only wants the whereabouts of the game to be indicated, so that he may walk them up. There is, however, a perfectly palpable tendency to crouch still observable in many of the best and highest bred setters of the present day, which is unquestionably accounted for by the former habits of the breed, and the uses to which it was put.

From the following remarks of Mr. Taplin it will be seen that in the early years of the present century the Setter was credited (as he is by many in the present day) with being naturally of timid and nervous temperament, for he writes:

"It has already been observed that the setter is in pos-

sion of a constitutional timidity, which induces him to dread the severity of correction, and, of course, to avoid the means of disgrace; fraught with this irritability, their treatment in the field becomes matter of judicious discrimination. Dogs of this description, perpetually alive to the fear of giving offence and incurring bodily punishment, lay claim to a very tender attention as well at home as in the field. Warm, lively, impetuous sportsmen contribute not unfrequently to their own mortification and disappointment, for many dogs of this description excited in passion or heat with severity are so completely overwhelmed with distress or humiliated with fear that they almost insensibly sink at the feet, and can be prevailed on to hunt no more, or, what is sometimes the case, sink away home without the least chance whatever of being again induced to render further assistance in the sport of the day."

It is an undoubted fact that in the present day many setters are found who would otherwise have been invaluable in the field are ruined in their breaking and subsequent education by the severe treatment they receive at the hands of those in whose power they are placed. We are decidedly of the opinion that were less stringent punishment inflicted for trifling offenses upon the members of more than one well-known kennel, an even increased reputation would quickly be added to that which it already possesses.

Three years later than the date in which the "Sportsman's Cabinet" was published, viz., in 1896—there was a sale of setters, the record of which has been handed down to the present day. The prices realized were for the period decidedly good, and as the kennel was the property of a rather famous individual in his way—Daniel Lambert, the historical fat man, who shortly before his death scaled fifty-two stone eleven pounds—and the list, moreover, is valuable as an index to the prices of sporting dogs seventy years ago, we produce it at length:

Peg, a black setter bitch.....	41 guineas
Punch, a Setter Dog.....	40 "
Brush.....	47 "
Bob.....	20 "
Bell.....	32 "
Demise.....	22 "
Sam.....	26 "
Charlotte, a Pointer Bitch.....	23 "
Lucy.....	12 "
Total.....	218 guineas

This gives an average which would make dog-breeding a successful commercial enterprise even in the present day; but it is a notable fact that the setters fetched better prices than the pointers, which must be taken as a proof that the breed was coming up to a higher position in public estimation, or possibly Mr. Lambert's kennel was stronger in Setters than in pointers.

The date of introduction of the setting dog or spaniel into this country is not clear. There is no special reference to him in the old forest laws of Canute, which guarded against the keeping of greyhounds except under the stringent conditions of training the animals or keeping them at a distance of ten miles from a royal forest; and even mastiffs kept by farmers and others for the protection of their dwellings had to lose three claws, which was called "expediting."

Spaniels are, however, specially mentioned in a statute anterior to the time of Canute, and the dogs then regarded by the law were mastiffs, hounds, spaniels and tumbler. And in a statute of James I. it is provided that no person shall be deemed qualified to keep setting dogs who is not possessed of an inheritance to the value of £140 per annum, a lease of life for £30 per annum, or who is worth £200 per annum, unless he is the son of a baron or knight or heir-apparent to an esquire.

The changed character of the sport of fowling when netting gradually gave way before the increasing use of guns, until it finally became entirely superseded, did, no doubt, act powerfully in modifying the setter, and the plastic nature of the dog has ever since been taken advantage of to alter and improve him to suit the constant changes in the conditions of sport.

As a factor in the conversion of the ancient spaniel into the modern setter, Blaine throws out the suggestion that a cross with one of the *celeres* or swift-footed dogs was resorted to, and that the pointer is probably a cross between the spaniel and one or other of the *pagures*. To produce the setter by such a cross, we do not think such a result would follow, for even if in the first cross those were apparently developed, they would be unequalled in several members of the litter, and good judgment in selecting the bitches kept for brood purposes, and wise mating with spaniel dogs excelling in qualities partially lost by the cross, would soon restore these in all former fullness of development, while the desired modification of form and other characteristics was sufficiently preserved.

If the theory of the cross with either of these animals, or some other of the *celeres* available (but none of which, we are of opinion, would be so suitable to the object in view) be rejected, then we are thrown back on the theory of selection of individuals of the same variety: for all must admit that, changed as the modern setter is from all portraits of him in pen, pencil, or by brush, as he existed even so late as the last century, he still, in all essentials, shows a strong alliance with the spaniel family. It is not impossible in the production of the modern setter, that he arose from the roughest of spaniels described by our earliest writers by means of selection alone.

None of our domestic animals are so easily changed, and, as it were, molded to the breeder's will, as the dog, and, in the case under consideration, the time has been more than ample to effect the change.

It is very improbable that we have a better setter judge than Mr. William Lort, of Fron Goch Hall, Montgomeryshire, and his experience in the breed is practically unlimited. We are, therefore, glad to be able to lay before our readers Mr. Lort's views upon the probability, and also of the desirability, of the pointer cross, which so many believe to be

largely present in most strains of setters. Mr. Lort writes thus:

"As to the origin of the setter I am not sure of the correctness of my old and valued friend, Mr. H. Herbert, when he says: 'There is no doubt whatever that the true setter is a pure strain of unmixed spaniel blood, the only improvement produced in the breed arising from its judicious cultivation,' etc. I am quite sure that years ago, say from forty to fifty, it was no uncommon thing to get a dip of pointer blood into the best kennels of setters. Sometimes it answered well, and though for a generation or two it diminished the coat, not always though at the cost of appearance, it fixed and strengthened the skin, giving life and motion to the coat, and, whether rightly or wrongly, in olden times was thought a good deal of—it rounded the foot."

"I know how shocked some of our modern breeders will be at the idea of their favorites having in their veins a drop of pointer blood. It is well perhaps that it is not generally known how many fashionable strains have been vitiated with much more objectionable blood than that of the pointer. I have seen droppers cross between a pointer and setter—yes, and dogs bred from droppers—possessing exquisite powers of scent, lovely tempers and great pace. I think there is reason to believe the spaniel to be the foundation of our present setter."

"As a case showing that it is possible for cross-bred dogs to breed true, I knew of a black setter bitch three crosses from pointer, belonging to Robert Warner, of Leicester Abbey. She was good herself, having all the qualities of a pure setter, and, curious enough, she bred well from either a setter or pointer. Mr. Warner gave his keeper (who afterward came into my service) a brace of black puppies, by a pointer, of this bitch. They looked all over pointers, they worked like pointers, they were excellent pointers, and were sold, when broken, at forty guineas—a good price in those days. I myself had setters from her, and they were good setters, and showed all setter characteristics."

A strong confirmation of Mr. Lort's theory is to be found in the subjoined engraving from a painting by the famous French artist, Alexander Francois Desportes. This great master painter—born in 1661 and died in 1745—was elected a member of the French Royal Academy of Painting in 1699, and of its Council in 1714. For many years he occupied the Court position of historiographer of the chase, created expressly for him by Louis XIV.; and his pictures, which are very numerous, are greatly prized for their fidelity to nature. The engraving we reproduce from his pencil is entitled "Dogs and Partridges," and is valuable as distinctly showing that the pointer had been crossed with the spaniel before and during his time, and that the result was a dog very like our modern setter.

It has been before shown that up to the end of the last century pointers were the more favored breed of dog by sportsmen, but of late years the setter has made great progress in public popularity. This may be due to a certain extent, accounted for by the existence of the three varieties—English, Scotch and Irish—to which allusion has been already made; but we feel inclined to believe that the natural toughness of this dog's constitution has more to do with the change than has taken place. The thickly-padded feet of the setter unquestionably renders him a preferable dog for all sorts of rough shooting, and on the moors he is far better able to withstand the broken ground and the hard work than he is encountered than the pointer, who is more easily fatigued. On the other hand, exception has been taken to the setter that, though physically stronger than the pointer, he is not able to work so long without water, and it may be mentioned that this theory was in existence at the time Taplin wrote, for he remarks, with reference to this, his favorite breed:

"There is an erroneous opinion in circulation that it is a disadvantage, that they cannot continue to hunt long without water; though it is perfectly well known to the experienced sportsmen they can endure heat, thirst, and fatigue as well, if not better than, pointers; they are certainly more difficult to break, and when broke are most apt to run wild and unsteady if not frequently hunted."

Nearly twenty years later John Scott writes in the "Sportsman's Repository":

"Many sportsmen prefer the setter to the pointer for pheasant shooting, as more active and hardy, having so much of the quality of the spaniel, and therefore not shivering at the thicker coverts. On the moors, and for grouse shooting also, the preference of the setter is decisive, for although he is said to require much water, and to be unable to endure heat and thirst like the pointer, the former, from his constitutional activity and the hardness of his feet, is superior in a long day over a rough and uneven surface. From accident, or from that never-failing desire of shining by the intermixure of breeds, with little consideration of the end, pointers have been crossed with setters, and setters with pointers, but we have not seen any beneficial result. On the score of utility, the setter can derive no improvement from such a cross; and granting—which, however, is not proved—that the pointer gains something in regard of usefulness, such advantage will be counterbalanced by an abatement of size, figure and staidness, on which account only, perhaps, he superseded the setter in the affections of the sportsman."

"It has been disputed very uselessly whether the setter or the pointer have the most powerful nose; but let a sportsman take a thorough good dog of either kind into the field and he will no longer trouble himself with that dispute. Beyond a doubt the setter is the most useful gun dog of the two, but the pointer is the largest, most stately and showy, and is admired for his rate, his high ranging and steadiness. The setter on his part may put in his claim, and more especially when of the pure breed, to his full share of the intelligence, sagacity and affection of the man, which shines so continually and so delightfully in the spaniel."

Such remarks as above would seem to be broken a very rapid advance on the part of the setter in the estimation of sportsmen who used the gun, for it must be borne in mind that not twenty years before it would seem that this dog was only being gradually introduced into this branch of sport, having more generally been used in netting operations up to the commencement of this century. At the period now past (1860) the setter is certainly the more successful dog in the field, as his many triumphs in field trial competitions must amply prove. With reference to these trials it may be briefly mentioned that they were instituted by the Kennel Club, which is a society originated about the year 1869 for the purpose of promoting the general improvement of dogs, dog shows, and dog trials. These latter are unquestionably decided proofs of a dog's capacity for work, and may be regarded as the successful trial of a dog's powers. They have been largely patronized by the higher class of sportsmen who have shown great interest in the trials, and who have in addition entered their dogs largely for competition.

Who Has Tins Dog?—On Sept. 16 a black and tan Gordon seth bitch, 3 years old, was lost by the man who was exercising her on Boston Common. She was of medium size, with a white pile running up to throat, rather slightly built, with fine, silky, straight coat; the tan behind running into the long hair of her legs. Rather a long nose, eyes dark hazel, showing the haws somewhat and rather slanting, giving her what might be called a pathetic expression when she looks at one. She is of a very gentle disposition, answers to the name of Beauty, and is broken. When lost she had on a black leather collar, made round like a trace, with a heavy silver-plated buckle, and a plate with name, address and license number on it. About three months ago the hair at the tip of her tail had been trimmed down with scissors. Any information which could lead to her recovery would be most thankfully received by the undersigned, who would pay a fair reward for her without questions if she is in the hands of dealers.

B. B. GREENOUGH,  
10 Charles St., Boston, Mass.

## KENNEL NOTES.

NAMES CLAIMED.—Red Maid—Mr. J. Chubb, of Cleveland, Ohio, claims the name of Red Maid for Irish setter bitch puppy out of Dell by Pat.

Red Rarus—Mr. H. O'Neal, of Cleveland, Ohio, claims the name of Red Rarus for Irish setter dog puppy out of Dell by Pat.

SALES.—Willard—Jesse whelp.—The Hornell Cocker Club has sold to Mr. E. S. Bird, Rockland, Maine, a cocker spaniel dog puppy, (pure black) out of Josie by Willard, whelped August 1, 1890.

Pat—Dell whelps—Mr. J. Chubb and Mr. H. O'Neal have purchased from Mr. Geo. Purdon, Orange, N. J., two Irish setter puppies, dog and bitch, out of Dell by Pat. Dell out of Beekerton's Bell by Champion Rufus. Colgate's Pat out of Havett's Nell by Champion Elcho, Nell Phunkett Stella.

René III.—Mr. E. F. Mercilliot of this city has purchased from Dr. John Meyers his pointer bitch René III.

Pet—Mr. E. F. Mercilliot, has purchased from Mr. W. H. Beadle his pug bitch Pet.

PRESENTATIONS.—Ray Della whelp.—Mr. W. Livingston has kindly presented Mr. F. Satterthwaite a fine dog puppy out of Della by Champion Ilay. The youngster has the same color and markings as his sire.

BRED.—Jesse Aldershot—Mr. E. A. Herzberg's Jessie, dam of St. Elmo, to same owners imported Laverack, Aldershot.

Belle—Paris—Mr. H. B. Harrison's blue Belton setter bitch Belle, Pride of the Border—Kirby, to Mr. H. I. Smith's champion Paris.

WHEELS.—Fairy II—Mr. J. C. Higgins, Delaware City, Del., Fairy II, whelped on Sept. 13, to same owners Pointe.

Lassie—Dr. J. W. Downey's rough coated collie bitch Lassie whelped Oct. 1, eleven puppies, eight dogs and three bitches by Lindsay's Tex, last New York 1890.

Correction.—Mr. E. F. Mercilliot writes us that the pug bitch recently purchased by him from Mr. W. H. Beadle, is named Pet and not Pop as published in our issue of Sept. 30.

Lucie—Mr. H. P. Dorthel, of Goldsboro, N. C., claims the name of Lucie for Irish setter bitch puppy, whelped July 24, 1890, by Rory O'More out of Dayton's Nora.

Dolly A.—Mr. H. P. Dorthel claims the name of Dolly A. for English setter bitch puppy, whelped Sept. 4, 1890, by Hengary, Pride of the Border—Bouquet Carre, out of owners Diana II.

Victor—Lucy.—Mr. W. Elmore has sold to Mr. Frank G. Herrick, Albany, N. Y., an English labrador beagle puppy out of Lucy by Victor.

BEACON-TREE.—What remedy can I use that will remove warts from my setter dog's foot and ear? He is constantly biting the one on his foot.—Ans. Apply carefully a little caustic potash or nitrate of silver every other day until the warts disappear. Muzzling the dog will prevent him from biting the afflicted parts.

POSSO, Norfolk, Va.—My setter dog aged about eight years has a constant severe cough. Nothing in his throat that I can perceive. In good health and condition otherwise. Please advise me what to do for him. He has no cold. Ans.—Have him examined by a competent man. The cause must be discovered before prescribing a remedy.

A. S. W. Worcester, Mass.—I have a Newfoundland dog three years old. He has begun to have fits. What shall I do for him? Ans.—Give him a teaspoonful of sulphur each day for three or four days, and then a dose of castor oil. Feed low and give plenty of exercise.

—For Nephritis, Pains and Aches in the Back, Kidney or Limbs—Hop Bitters.

## The Rifle.

—Address all Communications to "Forest and Stream Publishing Company, New York."

BOSTON, Sept. 29.—At Walnut Hill to-day the long-range match was continued, with the largest number of entries of the season. The day was not a good one, the wind blowing erratically from west to south. Subjoined are the scores:

		H. Tyler.									
800 yds.....	5	3	5	5	5	5	4	4	5	5	3-78
900 yds.....	5	5	5	4	3	4	5	5	5	5	3-78
1,000 yds.....	3	3	4	4	5	5	5	5	4	5	5-80-215
		G. H. Thomas.									
800 yds.....	5	5	5	5	5	5	5	5	5	5	5-78
900 yds.....	4	5	5	5	5	4	5	4	5	5	5-80
1,000 yds.....	4	5	5	5	5	5	5	5	5	5	5-72-214
		W. Charles.									
800 yds.....	5	4	5	5	5	5	5	5	5	5	5-78
900 yds.....	3	4	5	5	5	5	5	4	5	5	5-71
1,000 yds.....	4	4	5	5	5	5	5	5	5	5	5-69-213
		W. H. Jackson.									
800 yds.....	5	3	4	5	5	5	5	5	5	5	5-73
900 yds.....	5	5	5	5	5	5	5	5	5	5	5-73
1,000 yds.....	5	5	4	5	5	5	4	5	5	5	5-68-219

of renown like Bramhall, Fisher, Palisat and Rimington—archers who have scored in private practice from 1,000 to 1,350 points at the Double York Round, have been shooting at these meetings, and yet the nearest approach to this superb score was Mr. Rimington's record of 48—286, secured at the National Meeting of 1878. The details of this 60 yards' score are as follows:

	Hits.	Score.
First dozen.....	12	70
Second dozen.....	12	74
Third dozen.....	11	83
Fourth dozen.....	11	82
Total.....	47	299

Her last twelve arrows scoring five golds, six reds and one blue.

We wish every lady archer in America would study this score, and become firm with the determination to emulate it.

It is a truth which few ladies in this country seem to understand, that at ranges of 60 yards and under the ladies have a vast advantage over gentlemen, and with the same careful study and practice should greatly excel their more powerful husbands and brothers. The bows used by the gentlemen are too powerful for the best 60 yards' work. The aim comes so much below the target that the greatest accuracy is not attainable, while with the bows of 23 to 32 pounds used by the ladies, the aim comes usually about the gold at 60 yards. It is, of course, well known that in delicacy of touch and manipulation, the ladies are far superior to gentlemen, and there cannot be a question but that they should be victorious over their male adversaries at all ranges from 30 to 60 yards. Indeed, so closely have the ladies approached the gentlemen already in Great Britain, the records of this national meeting bear witness in the fact that, taking the thirty highest scores made by the ladies with 48 arrows at 60 yards, and compare them with the thirty highest scores secured by the gentlemen at the same range, and we find the gentlemen scarcely two points ahead, the ladies averaging 164 points, to 165 by the gentlemen. This should be an incentive to our ladies to adopt a correct system of aiming, and diligently strive to attain that high degree of skill now possessed by their fair cousins beyond the sea. Our gentlemen are pushing up toward the best of English scoring—will our ladies permit themselves to be successful? We shall see.

Below we give the scores of all the ladies and gentlemen in the contest for the medals in their order of excellence, observing only that Mrs. Hornblow, though obtaining only second gross score, secured the national medal by a majority of points, gaining two points for gross hits, one point for hits at 60 yards, and one for score at 60 yards; while Mrs. Leigh obtained two points for gross score at the Double Round, and one point for score at 50 yards; Mrs. Butt gaining one point for hits at 50 yards. Mr. Palisat gained all the points for the gentlemen's medal, except one point, which went to Mr. Rimington for score at 60 yards. It should also be noted as a matter of exceeding interest in archery that Mrs. Hornblow, who now holds the Lady Championship Badge, has won the proud distinction on eleven different occasions. Since the formation of the National Archery Society, she has secured its record of championship in these years and with the scores here given: 1853, 108—365; 1856, 109—427; 1859, 101—437; 1862, 128—689; 1863, 116—478; 1865, 123—629; 1870, 134—701; 1871, 139—746; 1872, 139—660; 1873, 142—704; 1880, 133—593; her score of 142 hits and 764 value, by which she gained the championship in 1873, being the highest which has ever won that emblem.

The following are the scores for the medal contests for 1889:

man. Mr. Grace soon treated the bowling with great vigor. Two legs laid for four, and a couple of cuts for three, were quickly added by him, and Mr. Lucas sent the ball to square leg for four. Twenty-one runs were the outcome of eight over delivered by Mr. Palmer, consequently he relinquished the ball to Mr. Boyle at 203. Eight runs were produced in three overs and a half, and then Mr. Lucas was unfortunate enough to play the ball on. His hits included five fours and nine twos. Barnes was most warmly greeted on proceeding to the wickets. He led off with a fortunate snick for four. The Australian keeper was twice struck with the ball, once by each bowler. He bore these knocks with fortitude, however, and sneaked to his post. A clever drive for four along the ground by Mr. W. G. Grace off Mr. Boyle followed, and Barnes was accredited with a snick for two. His first good hit was made off the next ball by a crisp cut for three from Bannerman. Mr. Grace obtained an off-drive for four from the professional, and then hit the ball almost straight to the pavilion. Mr. Alexander tried to catch it, but failed; the chance, however, was exceedingly difficult. As Mr. Boyle was punished far too much to suit the colonials, he, at 254, resigned the ball to Mr. Palmer. Barnes secured a couple of cuts and an on-drive, for which nine were registered. These hits were backed up with an on-off drive for four by the Gloucestershire captain. As runs were still coming rather quickly, Mr. Alexander was put on instead of Bannerman at 263. This proved a most judicious tactic, as the third ball Barnes cut into his wicket. Three down. Lord Harris was heartily cheered on his way to the wicket, and the first ball he received he drove to the on for a couple. Mr. W. G. Grace hit the first ball of Mr. Alexander's second over to the off for four, and the last he cut with a like result. A single was then added by him, which caused him to face the onslaughts of Mr. Palmer, who was bowling with great precision—so much so, that he quite beat Mr. Grace with a ball that took his off-stump. Thus closed one of the best exhibitions of batting that the Gloucestershire player has ever shown. It occupied four hours, and was composed mainly of a dozen fours, ten threes and fourteen twos. Lord Harris was joined by one of his own county batsmen, Mr. F. Penn. The former secured a leg-hit for four, and a straight drive of the like value by him shot the total past 300 at 4.45. The spectators showed their appreciation of this long and continued applause. After a maiden had been sent down by Mr. Palmer, Bannerman received the ball from Mr. Alexander. Both batsmen continued to hit with considerable skill, and it was thought highly probable that another long stand would be made. Mr. Penn cut each bowler for four, while Lord Harris hit a ball of Mr. Palmer's very finely to square-leg for a similar sum. This brought Mr. Boyle on again. Mr. Penn hit Bannerman to leg for four, but the bowler was avenged by the very next ball, which clean bowled him. Five for 322. Mr. A. G. Steel came, and once more the batting triumphed. Four fours (three of them from Lord Harris by drives and a cut, and one to Mr. Steel by a drive) were the most notable items in the dozen overs which followed, and at 355 Mr. Palmer once more tried his hand in lieu of Mr. Boyle. This seemed quite to the liking of Mr. Steel, who cut the first and last balls of his third over for four each. Mr. Alexander was consequently put on at 389. Mr. Moulie a few overs before having relieved Bannerman. Mr. Steel cut the first ball of the former change for four, while in the next over Lord Harris made a grand drive to the boundary, which caused the "400" to be hoisted. A slight drizzling rain now fell, but it was not sufficient to interrupt play. Mr. Steel having hit a ball of Mr. Moulie's to square leg for four, was deprived of the company of Lord Harris, who played the ball into the hands of slip. Six for 404, no less than 82 having been added since the fall of the previous wicket. Mr. Steel only outlived his captain for three overs, when a fine catch high up by mid-on disposed of him. Seven for 410. The Hon. A. Lyttelton and Mr. G. F. Grace were now associated, but the partnership was brief, as before even a single had been added Mr. G. F. Grace was taken at mid-off. The day's play was now at an end, 410 runs having been recorded at the cost of eight wickets.

The slight rain of the previous evening had no appreciable effect on the wicket on Tuesday, when the weather was again fine. Shaw was deputized to aid Mr. Lyttelton in the batting at five minutes past eleven o'clock. This he did not do with much satisfaction, as the first ball of Mr. Moulie's third over took his leg stump. Nine for 413. The bowler at the opposite end was Mr. Palmer. Morley, the last man, added a couple of runs (one from an overthrow), and Mr. Lyttelton augmented the total with a cut past cover-point for three and a single, when, in attempting a run which should have been easy enough to get, Morley was run out at 11.20. Total, 420. Duration of innings, five hours fifty-five minutes.

Twenty minutes elapsed before the English took the field, Bannerman accompanied the captain, Mr. Murdoch, to the wickets, they being loudly cheered on their way thither. Morley delivered the first over, which was rather roughly dealt with by Bannerman, who hit the first two balls to leg for four each, and secured a single from the third. He continued to hit well, and the first twenty-eight runs (which, besides the hits mentioned, included two others to leg and an off-drive for four, and a cut for three), were all made from his bat. A great misfortune now befell the visitors, as Mr. Murdoch was wonderfully well caught by Barnes at mid-off. One down. Mr. Groube appeared, and a quick chance was soon given by Bannerman to Morley at forward short peg. This opportunity was not, however, embraced by the Nottingham professional. A single only came from the four following overs. Bannerman then made a cut for three, and four more were placed to his credit, three of them being the result of an overthrow. Another slight chance was given to Bannerman to slip; but, although this was not accepted, he did not profit much by it, as the first ball of the very next over upset his leg stump. Three for 39, the score being a single out, as the number must have been even, as the batsmen were at the same ends at which they started. Mr. McDonnell joined Mr. Groube, who cemented the partnership with a cut for three, and soon afterward made a similar hit for four. Mr. McDonnell in the meantime had obtained eight by a couple of square-leg hits and a snick. The total having traveled to 59, a ball of Mr. Steel's with a good pitch, rose much more rapidly than Mr. Groube had calculated, and took off his stump. Mr. Slight partnered Mr. McDonnell, and at 62 Shaw supplanted Morley. The first-named batsman had a narrow escape of being run out in the second over of the change, but the ball was badly returned. This batsman then drove a ball of Shaw's over the heads of the crowd in the direction of the tennis court. At 84 a double variation in the attack was tried. Shaw crossed over to the northern wicket, and Morley went on at the pavilion end. The latter was a step in the right direction. The second ball Mr. Slight played into the hands of third man, and

the fourth Mr. Blackham returned very hard to Morley, who seemed it admirably with his left hand high up. The bad fortune of the Australians stuck to them, as Mr. McDonnell was well taken at mid-on at 89. Messrs. Bonner and Boyle were now in possession, and the former played a few balls in a style which threatened to give the attacking party some trouble. He was prevented from doing so, however, by a splendidly judged catch at long-field on by Mr. G. F. Grace; the ball seemed to hang a long time in the air, but the fieldman waited for and cleverly secured it. Seven for 97. Mr. Palmer appeared on the scene, and four byes caused the three figures to be signalled on the telegraph board. Mr. Boyle continued to bat in pretty good style, relieving the monotony of singles with a drive to the rails in front of the pavilion. Mr. Steel resumed in place of Shaw at 112, but the other bowler clean bowled Mr. Palmer when a single only was added. Mr. Alexander's efforts were not particularly successful, as, with the addition of thirteen—six of them from his bat—he collapsed through a very smart catch in the slips close in. Luncheon now intervened. Mr. Boyle being not out twenty-two, Mr. Moulie, the last man, joined Mr. Boyle afterward. The latter made a drive for four, and a snick for a like sum. At 142 Mr. Grace relieved Mr. Steel, and, after an addition of seven runs, Mr. Moulie played a ball of his in short-leg, where Morley caught it. Total 149. Time, three o'clock. Duration of innings, two hours thirty-five minutes.

The wide differences of result at the close of an innings gave was enough to dishearten any team, but the Australians did not show the white feather at all. The same order was not preserved in the first venture, Bannerman being accompanied to the wickets by Mr. Boyle. Shaw and Morley were this time entrusted to open the attack. The second ball delivered by the fast bowler struck Mr. Boyle severely on the hand. Bannerman then cut Morley for four and three, and this, with a single to him, was the only contribution made when he sliced the ball to square-leg, and Mr. Lucas ran from mid-on and caught it. The colonial captain, Mr. Murdoch, now came, but was the unfortunate witness of the downfall of two of his companions. Mr. Boyle started for a second run, but the ball was promptly returned by Mr. Grace to Morley, who put the wicket down before the batsman had got within the crease. This disaster was quickly followed by another, as Mr. Groube was admirably caught in the slips without having scored. Two for 13, three for 14. It now seemed exceedingly likely that an easy one-innings victory was in store for England. Mr. McDonnell arrived to the assistance of Mr. Murdoch, and both batsmen played skillfully and carefully. Five runs were put down by Mr. Murdoch, four of them from an overthrow which sent the ball to the boundary. After this mishap the holding became exceedingly good, but both batsmen continued to play the bowling with composure. Mr. Murdoch made two cut for four each, and Mr. McDonnell emulated this performance by making four drives, from which no less than sixteen runs accrued. This caused a feeling of dissatisfaction in the breasts of the attackers, and Barnes consequently relieved Morley at 51, and Mr. W. G. Grace did the same kind office for Shaw a run afterward. This did not at all interfere with Mr. McDonnell for some time, who made three fours by on-drives and a cut. Mr. Steel relieved Barnes at 68. In his second over, Mr. Murdoch cut the ball past cover-point, and drove the next one to the on, from each of which four runs were gained. This he quickly supplemented with a square-leg drive for the same value. Nor was Mr. McDonnell idle, as he twice drove Mr. Grace to the boundary, the ball pitching near the same spot each time. His downfall, however, came swift upon him after this, as the next ball he stopped with his leg, and an appeal for 1 by Mr. W. G. Grace was favorably answered. Mr. Slight's stay was brief and unprofitable: a grand catch by Lord Harris just in front of the ropes at long-off dismissing him. Five for 101. Mr. Blackham fared much better than he had done in the previous venture, and in conjunction with Mr. Murdoch, caused the bowling to undergo many changes. Mr. Steel gave way to Morley at 112, and a dozen runs later Shaw displaced Mr. Grace. This latter change did not suit, as each batsman cut the ball at four, and Mr. Blackham sent it to the on for a like sum. The slow bowler, therefore, was taken off by Mr. Lucas, at 143, and, without anything more, Mr. Blackham played the ball to "the doctor" at point. Six for 143. Mr. Bonner supplied the vacancy, and both he and Mr. Murdoch retained possession of the wickets until they were drawn, the total then being 170. Mr. Murdoch having made seventy-nine and his companion thirteen.

A short day on Wednesday was fully expected, as 101 runs were left to the four uncaptured batsmen to obtain to prevent the Australians suffering a single-innings defeat. The game was resumed at 11.15, Morley and Mr. Steel opening the bowling against the not-outs, Messrs. Murdoch and Bonner. The colonial captain soon gave evidence that he was in as good form as on the previous day. His first hit was a cut for four, and soon an off-drive for a like number was effected by him. His companion gave signs of not being comfortable with the bowling, and when eleven only were added to the overnight total he was altogether in the dark about a ball of Mr. Steel's, which clean-bowled him. Mr. Palmer, who followed, did not inspire his side with much hope, as he returned the ball to the smelter at 157. Eight down. There were still 84 runs required to prevent the innings defeat, and even the most sanguine friends of the colonials could scarcely have dared to hope that they would be got. Their wildest expectations were, however, more than realized. Mr. Alexander assisted Mr. Murdoch, and this, too, with a great measure of success. Mr. Steel was soon hit about with freedom, and at 217 he gave up the ball to Mr. W. G. Grace. The last arrival then sent Shaw to square-leg for four. This bowler then gave Mr. Murdoch a rather ugly knock, which delayed the game for a few minutes. The batsman, however, continued his hitting in a very plucky style and with the same measure of success. He completed his hundred shortly afterwards amidst the most deafening cheers of the spectators. Mr. Alexander, who at a critical point had batted in a careful and effective manner, was now forced to depart through a catch in slips. Nine for 239. When Mr. Moulie joined the captain there were still 35 runs needed to prevent the single-innings beating. The fieldsmen were all on the alert, and most of them surpassed themselves. The batsmen, however, played with corresponding care. The 250 was quickly gained, and Mr. W. G. Grace gave up the ball to Mr. Steel, whose first delivery Mr. Moulie sent to square-leg for four. Morley was played with great confidence by Mr. Murdoch and the left-hand bowler had to make room for Shaw. This had the effect of lessening the rate at which runs were gained, but did not get the coveted wicket, so Morley came on again. This did not make any difference to the batsmen, and at five minutes past one

o'clock the deficiency in the first innings was rubbed out, amidst the greatest enthusiasm. A sharp run now nearly got rid of Mr. Murdoch, but the ball was returned to Shaw too wide for him to do anything with it. A complete change in the attack was resorted to at 237, Messrs. W. G. Grace and Lucas going on in place of Shaw and Morley. In the first-named bowler's opening over Mr. Murdoch cut the ball for four, which sent the total up to 300 at 1.40. Other alterations in the bowling were effected, Mr. Penn, Mr. Lucas, and Barnes all trying their hands. The batsmen were by no means disconcerted, however, and when two o'clock arrived they were still unvanquished, the total being 324. After luncheon Mr. Steel and Barnes took charge of the bowling, and Mr. Murdoch gave the only chance of his innings to the wicket-keeper, which was not taken. Mr. Moulie did not exhibit the same confidence as he had done in the morning, and ten minutes proved sufficient to finish the venture, Mr. Moulie having his stump knocked over. Total 327. The Australian captain was almost carried in by the crowd, who showed the most unbounded enthusiasm. The admiration was quite justified by the remarkable performance made against the best bowling and fielding in England. His chief figures were one five, eighteen fours, three threes, and two twos.

The 57 runs necessary for England to win would not, it was naturally thought, cause much trouble. It proved, however, a far more difficult task than had been anticipated. Mr. Lyttelton, the not-out of the previous innings, was sent in with Mr. G. F. Grace to commence getting them. Messrs. Boyle and Palmer took charge of the ball. The Australians were well on the *qui vive*, and considerable consternation was caused when, with his second ball, Mr. Grace was clean bowled, and thus got a pair of spectacles. One for 2. Mr. Lucas came, but his career was brief—caught at wicket. Two for 10. This was very bad, and a fear almost too dreadful to think of took possession of many of the spectators. This feeling was intensified when at 22 Mr. Lyttelton was dismissed by Mr. Palmer. Three down, and not half the required number of runs obtained, was indeed a sorry outlook. Nine runs only were added, and then a double disaster befell England, Barnes being caught at mid-on, while Mr. E. M. Grace played on. Four and five for 33. Mr. W. G. Grace appeared on the scene, and slowly and steadily the total advanced. Mr. Penn made two drives for four, and then gave a hard chance slip, which was not accepted. Mr. Grace also had a narrow escape of being caught and bowled. A cut for four was placed to the credit of the batsman. This left one run to win, which was obtained by the Gloucestershire captain at 4.15.

As a complete score was published in issue of Sept. 30, we refer our readers to our last number.

—\$25 to Doctor's visits will do you less good than one bottle of Hay Bitters.

## Yachting and Boating FIXTURES.

Oct. 9—Washington Village Y. C. Fall Regatta.  
Oct. 9—San Francisco Model Y. C. Regatta.  
Oct. 16—San Francisco Y. C. Closing Cruise to Martinez.  
Oct. 16—Dorchester Y. C. Union Cruise to Regatta.  
Nov.—Royal Bermuda Y. C. Cruising Trim Race.  
Dec. 2—Royal Bermuda Y. C. Cruising Trim Race.

—The Editor of these columns returns his thanks to the San Francisco Yacht Club for his election as an honorary member. The yachtsmen of the Pacific Coast have shown so much enterprise in the introduction of the yawl, a rig which is destined in time to become popular on the Atlantic seaboard, as well, and they may lead the way in adopting iron centre-booms and outside lead, that we deem it an especial honor to hoist the S. F. Y. C. burgee in our drawing office as a pleasant reminder of the compliment conferred.

## TRIMMING BY OUR SAILS.

FOR two long years FOREST AND STREAM stood alone among its contemporaries in its efforts to induce a change in public sentiment, a change from the flat bottom, overpersuaded, heavy, light weights then ruling high in favor among stay-at-home yachts and a class that was continually crying "in our shallow waters" because they feared to cruise beyond the mud flats at their very doors. The enemy was attacked all along the line, a desperate fight ensued and "the Forest and Stream man" was mentally consigned to the various asylums of the country over and over again. "You want a fast iron machine; we didn't cruise in rough water in America; the boat was smooth and the man who proposed to cruise beyond its confines was a madman, sure. And then depth was against speed, and the heavy hulls of the junks, and the crew allowed forward in a pen like the "black box" of Calcutta—such was the orthodox view "more resistance you found." The sleep in all its deformity, its rank stench, hobnob stench, manure stench, ugly spars and broomstick pole spiked above the crew, its hook-nose bowsprit, smack-like inlaid and lubber's rig; its sails at eyecore to men of taste and a butt of ridicule to sailors; its numerous holes and areas, unmanageable to a degree; hard enough on their leams to make a sailor swear: beasts to steer; trip-hammers in a sea; dangerous man traps; violent straining and leaky accommodations fit for human beings under a "hose," the crew allowed forward in a pen like the "black box" of Calcutta—such was the orthodox view "more resistance you found." The sleep in all its deformity, its rank stench, hobnob stench, manure stench, ugly spars and broomstick pole spiked above the crew, its hook-nose bowsprit, smack-like inlaid and lubber's rig; its sails at eyecore to men of taste and a butt of ridicule to sailors; its numerous holes and areas, unmanageable to a degree; hard enough on their leams to make a sailor swear: beasts to steer; trip-hammers in a sea; dangerous man traps; violent straining and leaky accommodations fit for human beings under a "hose," the crew allowed forward in a pen like the "black box" of Calcutta—such was the orthodox view "more resistance you found." J. T. Hornellsville, N. Y.—Send to the American Net and Twine Co., Fulton street, New York.

Who RICE.—Several inquirers are referred to our news columns of last week for information about wild rice.

C. L. M., Worcester, Mass.—The address you ask for is as follows: J. H. Scott, Shire, Yorkshire, England.

Shore, Brooklyn.—Mr. George C. Colburn's Duke was bred by Dr. A. C. Waddell. He was a cross-bred, English, Irish and Gordon. Color, black and tan. Duke was by Colburn's Dash, out of Mullin's Belle; Dash, by Putnam's Dan, out of Valentine's Fanny; Belle, by Polhemus' Duke, out of Jane. In 1877, second prize New York Show.

W. P. S., Mine Point.—Write to the correspondent whose letter to the Game Bag department of our last issue answers your inquiry. C. W. C., Colorado.—The dogs you refer to were Eastlie Dinants, dog and bitch, imported by Mr. Robert Hume, Dundee, Southampton County, Va.

W. W., Milwaukee.—Have the lake trout caught in Lakes Huron, Erie, or Michigan scales on them? Ans. They do; all trout have scales. Try the skin, and you will see them plainly.

G. H., Hudson, N. Y.—The post-mortem description sent us is very good and clearly expressed. Your puppy died of pneumonia (peripneumonia). This, however, is not the so-called "dog cough."

J. S. K., Long Island.—Fred is full Gordon setter. Sire, Ponto, imported by Viscount Parker; dam, Diana, imported by Agent National Line of steamers. Nita is half Gordon and Irish, being out of Nellie by Plunkett, both imported by Dr. Goldsmith, of Rutland, Vt.

F. W. C., Hamburg, N. Y.—We regret to hear of the accident to your setter. She is suffering from paralysis, the result of a spinal injury. Rest is probably all that can do her good. Without being able personally to examine her it is impossible to advise you further.

L. S. Z., N. Y.—We cannot advise you to cross a setter with a pointer, or a setter with a pointer. Of the two the latter is the best, and the get are called "droppers." We have seen some wonderful field dogs that were droppers, but we have also seen much better dogs that were purely bred.

C. B. D., Providence, R. I.—Your dog has internal cancer of the ear. The first thing is to remove any exciting cause that may exist, such as dirt, hardened cerumen (wax), etc. Syringe the ears with warm water, and, in the case of hardened wax, use a little olive oil. Carefully dry with a soft cloth, and use liniment and treat recommended to H. M. H., this column.

Norron, Evansville.—I have a Scott gun, with a 3-inch drop, and cannot catch a quick sight. 1. Can I have it straightened to 2 1/2 without spoiling the looks of the gun? 2. Will the stock be just as hard and strong as ever? 3. Have you ever heard of any gun stocks being straightened with success? 4. What is the average length of a gun? Ans.—1. Yes. 2. Yes. 3. Yes, dozens of them. 4. 22 to 35 inches.

F. W., Newark, N. J.—The description of your puppy's trouble is not sufficiently clear to determine the cause of the fit. Many young dogs are subject to them, and in time outgrow them. Fits are produced by worms. Try for them if you can discover any indication of their presence, and follow with castor oil. Feed on wholesome food and give plenty of exercise. Administer two grains of quinine three times a day for two weeks and write the result.

H. D. P., Brooklyn, L. I.—In a recent issue of FOREST AND STREAM you state that Putnam's Dan was by Palmer's Dash, out of Putnam's orange-and-white setter bitch Nell. Is this Stephen Putnam and Frank Palmer? 2. Are Putnam and Palmer alive? 3. As I have some of the above-named strain of dogs in my kennel, is the pedigree given a correct one? I have it, Putnam's Dan by Red Mead's Old Dash. Ans. 1. Yes. 2. Yes. 3. Yes; Paul Mead's old Dash was bought by Mr. Palmer from Dr. Mead.

C. F. K., Westfield, Mass.—I have a pointer dog who has had a leg since last spring. He coughs most while running about

after being let out in the morning. If he rests for a while, and then starts to run, he begins coughing again. His cough is a sort of gagging cough, and he raises a white frothy mucus. What shall I give him? Ans. Administer emetic of table salt—small tablespoonful. Follow with desert spoonful of sulphate of magnesia, and repeat the next day, and be careful in the dog's diet.

T. C. L., Rockingham, N. C.—Have you ever heard of a good gun of English manufacture having been burst by Dittmar powder? I have known several guns of American make burst with black powder, charge not exceeding 4 drs., if so much. I have used Dittmar for two years, and like it. May not the fault be in the gun, and not in the powder? Ans. If you have read the last two numbers of this paper, you are as capable of judging of the merits of the Dittmar powder as we are. One of the guns mentioned in letter of attorneys last week was of English make, and first-class at that.

H. M. H., Cincinnati.—For internal cancer use the following liniment, taking care to shake the bottle before the mixture is used: Goulard's extract of lead, one ounce; glycerine and carbolic acid, quarter ounce; finest olive oil, four and a half ounces. Avoid feeding meat, and the diet should consist partly of boiled green vegetables. It will be of advantage in treating cancer of the ear by the dog Epsom salts, one drachm to three drachms, according to size of the animal, twice or three times a week. See answer to C. B. D., this column.

H. W. H., Brooklyn, N. Y.—As far as we can make out, there is no universal standard of what a cocker spaniel should really be. For months past we have been advocating the organization of a cocker spaniel club, which should regulate the standard and draw up a scale of points that will be looked upon as authority in this country. In next week's issue we will publish a letter from a cocker breeder, and other articles of a like nature are to follow; from these you must draw your own conclusions. Our kennel notes and advertising columns will acquaint you with the names of the leading breeders.

YELLOW LEGS.—1. Is a cocker spaniel good for quail and grouse? 2. What is necessary in training them besides charging and retrieving? 3. When is the law off on quail in Connecticut? Ans. 1. A cocker spaniel can be used with great advantage for woodcock in the brush and coon. For quail and grouse a setter or pointer should be used, although cockers are used to make the latter bird tree, and thus admit of its being "potted" by those who are not experts on the wing. 2. Having them mind explicitly, working always in range of the gun, and dropping to "wing" and "shot."

E. N., Newcastle, Pa.—I have a black setter dog, five years old, that is afflicted with some disease which I believe to be distemper. He seems very stupid, nose hot and dry, appetite good; have had him in the woods recently, and he seems to have completely lost his sense of smelling. What shall I do? Ans. The symptoms you give are not those of distemper. Possibly the dog is suffering from fever, the result of cold in the head. Give heating desert spoonful of sulphate of magnesia and repeat next day. Then follow with two grains of quinine three times a day for two or three weeks. Write result.

C. W. L., Northfield, Vt.—The pedigree of your English setter puppy is incorrect. Ex-Gov. Rice, of Massachusetts, never owned a setter bitch. We cannot refer you to better articles regarding the breaking of dogs than those published recently in the FOREST AND STREAM. In our kennel department of last week's issue you will find the instructions for breaking dogs taken from Mr. Shaw's "Book of the Dog." We refer you also to these hints, which are from the pen of Mr. James Fletcher, of Glenmarke Lodge, Huntley, Aberdeenshire, N. B., whose experience in breaking operations is both practical and extensive.

G. W. C., Dowling Green, Ky.—I had two setter puppies aged seven and eight months. They were taken sick, beginning to mope around. They had no appetite, and the skin, white of the eye and gums and lips turned yellow as gold. One of them died last night, and the other is very sick. What shall I do? Ans. Your puppy died of jaundice. The cause we are unable to indicate. It would, however, be worth your while to investigate the local or special conditions to which the puppies have been subject. If the remaining puppy is still alive, remove him to different location, and give

two grains of quinine four times a day, and also four small doses of calomel, three grains every twelve hours. Feed on broths, etc.

SMELTER, Boston.—I am surprised to see that your columns of "Sea and River Fishing" contain nothing about smelt fishing. I am a lover of the sport, and I would like to see a little said about it, because smelt fishing is about the most important fishing in Boston. Why is it? Ans. Evidently because no one writes on it. As you are so interested in it, let us have an account of how you do it, including lines, size of hooks, bait and all about it. The department to which you refer is mainly filled with correspondence, with an occasional editorial note attached. You can easily see that you are as much to blame in this matter as any one, for we do not write fishing stories. Try it and it may wake up some one to give their mode, and so we can all learn.

W. D. B., New York City.—1. Where in New Jersey will I get good quail and snipe shooting? 2. Will you also tell me what ails my Newfoundland pup, five months old? She is low spirited, no appetite and after eating will vomit. Her eyes are also weak. Ans. 1. There are plenty of quail in all the Southern counties of New Jersey; also in Warren and Sussex. You will find difficulty, however, in shooting, as the farmers are opposed to city sportsmen. If by "snipe shooting" you mean what is known as "bay snipe shooting," the season has past. If you inquire about the English snipe shooting, it is very doubtful if sport of this kind will be had at all this season. Unless we have a three or four days' storm to wet the meadows, and that at once, there will be little snipe shooting this season. The meadows near Waretown and Pine Brook are considered good spots. 2. Give a few doses of sulphur, large half-teaspoonful every ten hours, until three or four doses are given, then follow with castor oil.

J. E. H., Vermont.—Can you explain why my setter bitch fails to have puppies? She is four years old, and has had one litter of puppies when two years old before I owned her. On the last two occasions when she was in heat, I have had her served by a dog five years old. These are the only times the dog was ever put to a bitch. The first time it was nine days after she commenced to be in heat, and the second time it was twelve days. She was with the dog only once on each occasion, and then took the dog readily. The dog was in fine condition as to flesh, and the bitch rather fat. The question is, what is the trouble? Can it be that there is anything wrong with the dog? He is well bred, and the only one I know of in this vicinity, so I am anxious to use him. Should they be left together longer, or have I chosen the wrong time? She remains in heat from sixteen to eighteen days, and I have supposed that about the middle of this period was the correct time? Ans. Your bitch is probably too fat; reduce her in flesh by giving plenty of exercise. She should be mated twice on two successive days. The last third of her period is the proper time. It is unlikely there is anything the matter with the dog.

B., Newburg, N. Y.—Can Scotch staghounds be used to advantage in hunting deer in this country? If so, are they as good as our ordinary deerhounds? Is there a breeder in this country from whom I could get one? Ans. The Scotch staghound, as ordinarily trained, follows the deer by view alone, and would therefore be of no use in hunting in this country except on the plains, where the quarry can be kept in sight. They would, moreover, be too fast for ordinary deer-driving, in which it is essential that the hounds shall keep close to the deer, or that the latter shall be very much frightened. Stenchage, it is true, considers that the staghound or rough greyhound, for we presume that it is of this animal that our correspondent writes, possesses some enough to follow even a cold track. These dogs have been extensively used in both deer and antelope hunting in the West, but have not proved so useful in this sport as have the smooth greyhounds, which have more speed, though perhaps not so much strength. The old English staghound was essentially a larger foxhound, in respect to his head, and had a body like a bloodhound, but somewhat lighter. The English staghounds of the present day are merely a larger and lighter draft of the ordinary foxhound. Staghounds are frequently advertised in our columns, and our correspondent can, no doubt, obtain one either by advertising or watching our advertisers' cards.

**OFFICERS.**—President, J. Palmer O'Brien, Pittsburg, Pa.; Vice-President, Sam G. Dixon, Philadelphia, Pa.; Second Vice-President, Edgar Hildekofer, Meadville, Pa.; Treasurer, F. A. Dineen, Lancaster, Pa.; Secretary, L. M. Clayton, Fourth Ave., Pittsburgh, Pa.

**EXECUTIVE COMMITTEE.**—R. F. Dorrance, Chairman, Wilkesbarre, Pa.; Wm. A. McIntosh, Pittsburg, Pa.; S. J. Thompson, Pittsburg, Pa.; J. J. Sillsburg, New Brighton, Pa.; Edward Grier, Pittsburg, Pa.; S. S. Brown, Pittsburg, Pa.

**FOR SALE.**

The following stock, to reduce my kennel. From the best advertised stock in the United States. No dog advertised as his father; but his father is as good as the most noted dogs in the country.

**Llewellyn setter bitch;** color, lemon and white, 12 months old, is a huge, strong dog, bone broken, and ought to make a rather in the field; is very obedient; his sire, champion Gladstone, is the best Llewellyn setter in the country, and has won many prizes in field trials and bench shows. Price \$20.

**Bushie,** imported red Irish setter, imported March, 1889, from the kennels of J. S. Skelton, Northwich, England. She is a large, strong bitch, four years old. She is a capital winner in every respect. Head up to the collar, ears long and pointed, plenty hair; fast at hunting, good nose, and no dog in her; hunted on punt and gobble; was in C. A. N. Y. show out in condition, and shown among the most noted dogs in the country the last time shown. Price \$10.

**Mark,** a deep mahogany red Irish setter, 15 months old; was in breaker's hands 6 months; is fast, good nose and staunch, and drops by motion of the hand; resists iron water. His sire is imported champion York, and dam Floss, a prize-winner, and imported from Ireland from the kennel of Miss Daly. Price \$20.

**Gordon setter bitch;** a beauty; color, black and tan; whelped Jan. 1889; hunted last fall on quail, and beautiful all over. She has a pure blood, has had one litter of pups. Price \$10.

**Fannie,** a red Irish setter; well feathered, good head, and beautiful all over. She is very fast, good nose and very staunch; will stand as long as you want by speaking to her; does not know what flush is. Broke on a fox. Price \$10.

**Lulu,** a lemon and white Llewellyn setter bitch, two years old; sire, the great Carlitz, who was bred by the late Mr. Carlitz, of the kennels of H. L. Llewellyn, England, and has a pure blood. Price \$20.

**Charles,** a deep mahogany red Irish setter, 15 months old; was in breaker's hands 6 months; is fast, good nose and staunch, and drops by motion of the hand; resists iron water. His sire is imported champion York, and dam Floss, a prize-winner, and imported from Ireland from the kennel of Miss Daly. Price \$20.

TRADE—"BEATS THE WORLD."—MARK.  
**Old Judge Smoking Tobacco.**

The Only Tobacco Ever Manufactured that does not Bite the Tongue.  
Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely: The Oil of Crocoate. CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 28, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared, that the unpleasant ODOOR and the injurious effects of the Oil of Crocoate are completely neutralized or destroyed, and the paper made saliva proof to prevent its becoming soggy or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this process will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water St., NEW YORK.

COLT, WEBLEY AND JAMES.

Our stock of breech-loaders is more complete this season than ever before, and is adjusted to meet every want. It embraces among others: COLT'S CLUB GUNS (genuine) for glass and ball and pigeon trap shooting, where closeness and great penetration are required. WEBLEY'S SPECIAL GUNS.—These guns contain every appliance which can contribute to beauty, convenience, or excellence in shooting. A JOB LOT OF WEBLEY'S GUNS, of many kinds, mostly heavy and specially adapted to killing large game, such as ducks and geese, at long range. ENO'S JAMES & CO.'S GUNS, for all sorts of work, including the TRAP GUN, or COMPLETE GUN, designed for the same class of work as the COLT CLUB GUN. FOREHAND & WADSWORTH'S SINGLE BREECH-LOADERS, with TOP LEVER. This last is JUST THE GUN FOR BOYS, or men who cannot afford to buy double guns.

## GUNPOWDER.

## DUPONT'S

Rifle, Sporting and Blasting Powder.

The most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1807, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN, Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING. Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

DUPONT'S RIFLE FG, "SEA SHOOTING," FG and PFG. The FG for Long Range Rifle Shooting, the PFG and PFG for general use, burning strong and moist.

Sporting, Mining, Shipping and Blasting Powders. Of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y. N. B.—Use none but DUPONT'S FG or PFG Powder for Long Range Shooting.

THE HAZARD POWDER COMPANY  
MANUFACTURERS OF  
GUNPOWDER.

Hazard's "Electric Powder." Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting." Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 5 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting." Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loading.

Hazard's "Kentucky Rifle." FFG FG, and "Sea Shooting" FG in kegs of 25, 12, and 6 lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and PFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

### FOREST AND STREAM.

NEW YORK, THURSDAY, OCTOBER 14, 1880.

**VELOCITY OF SHOT.**—We promised some weeks ago the publication of the full text of Prof. Mayer's paper on the Velocity of Shot. We regret to state that, owing to the serious illness of Prof. Mayer, he has been unable to prepare the manuscript for our columns, but promises it to the readers of the *FOREST AND STREAM* as early as practicable. An imperfect synopsis of the article appeared, at the time it was read, in some of the daily papers, and has since been copied by some of our exchanges. We thought it due to Prof. Mayer and to our readers to publish the article, when we do publish it, complete and as its author would have it appear.

**SPORTSMEN'S ASSOCIATIONS OF WESTERN PENNSYLVANIA.**—The Sportsmen's Association of Western Pennsylvania has 300 members; in fact, 288 appeared at last roll call. The association is now ten years old, and still growing. It is composed mainly of business and professional men, who have done much to enforce the game laws. Their club room is 50 feet front by 80 feet deep, situated in the most populous part of Pittsburg. The first floor is divided into a reading room, library, card room and a large billiard room. The second story is called the assembly or meeting-room, and besides the numerous chairs and tables for officers and members, contains cases of rare specimens of birds shot by members of the Association, as well as a large variety of small birds purchased from a skillful taxidermist in Massachusetts, making in all about 3,000 good specimens. Their exhibit of animals and reptiles is quite small, and some of the boys had better go after snakes a little.

The Alleghany Sportsmen's Association of Alleghany county is a little over one year old, and has at least 100 members, with headquarters in Alleghany City.

### A NEWSPAPER'S RESPONSIBILITIES.

AS newspapers are managed by individuals, they are no less liable to error than the latter. And, although employing the impersonal "we," their responsibilities to the public—to their readers and advertisers—are no less binding than are those of the individual business man. Moreover, because of their greater facilities for obtaining information, there are certain duties incumbent on the publishers of a newspaper from which commercial men are free. They must especially avoid advertising any article or implement that may be injurious to health or dangerous to life or limb. No concern can shirk the responsibility which will attach to it, if it knowingly advertises a dangerous gun or an unsafe pistol. Every one knows that a safe rifle cannot be made for \$5, and if persons represent that they are selling such a gun for that sum, this representation is *prima facie* evidence that the gun is not a proper arm to put into the hands of the shooting fraternity.

But a newspaper is not bound to furnish brains for its readers. It must exercise due care in receiving advertisements, and in this respect must protect itself and its patrons. It cannot, however, vouch for the honesty or business standing of all those who advertise goods for sale in its columns. Its readers, in treating with strangers who live at a distance, must be governed by the ordinary and generally accepted rules of business. A capitalist in Boston does not buy a mine from a Colorado prospector without taking some measures to see that the property in which he is to put his money is really what it is represented to be. Why should a sportsman in Texas buy a dog from a breeder in Maine without inquiring as to the responsibility and trustworthiness of the seller. Every man who shoots has his own ideas as to what a dog should do and be, and scarcely any two men think alike on this subject; moreover, as few men understand how to handle a dog, therefore an animal which will work well before a good handler may be worse than useless to another man, whose experience or knack is less. Years ago we laid down for ourselves a rule from which we have never deviated. It was simply this: never to buy a broken dog without ourselves giving it a fair trial. We are willing to pay the express charges both ways, and to deposit the price agreed on with some reliable party, preferably the Express Company. If at the end of the time agreed on the dog does not give satisfaction it is returned, and the only loss we have suffered is that of the charges.

We sometimes receive complaints from persons who have bought dogs through advertisements in our columns, which do not satisfy them. Such persons are often themselves to blame for the losses that they have incurred. They have not taken proper precautions to guard themselves against loss and bad treatment on the part of designing men. In these days of express companies no man need part with his money before he sees the goods which he is buying.

Another point to which attention must be called, is the offers which occasionally appear to give something of great value for little or nothing. It would scarcely appear necessary to warn intelligent men against offers of this kind, but certainly the "fools are not all dead yet," and each one who sends his money thinks that he will escape being swindled and that the rest of the community will come to grief. We have little charity for the people who are gulled by these transparent humbugs. They need a lesson of this kind. To all who are tempted in this way, we would say, however, beware of such traps; and if a man offers to sell a \$200 gun for \$20, don't buy it. There are philanthropists in the world, no doubt, but they have not yet been driven to advertising in the newspapers. They can find plenty of people on whom to bestow their favors without announcing it through the press. When the millennial day arrives, and some noble hearted sportsman desires to send to each bearer of the rod or gun, a \$35 split bamboo rod and equipments, a \$800 gun, a long-range rifle, and a thoroughly broken Faust-Keswick pointer, all for a three-cent stamp, we will agree that he shall have free advertising in *FOREST AND STREAM*, so that the sportsmen of America may all avail themselves of the opportunity offered.

In considering the advertisements offered us, we try to exclude all those which have anything about them which ap-

pears suspicious, but occasionally through misrepresentation or from some inadvertence advertisements may appear which should not have been admitted to our columns.

*FOREST AND STREAM* cannot answer or be responsible for casual advertisers in its columns or for those replying to such advertisements. We recommend our patrons, whether readers or advertisers, in doing business with strangers, to demand references, to have goods sent by express C. O. D., and in fact to protect themselves by all legitimate means. No one in these days expects a customer to buy goods, without inspecting them, and no one need feel aggrieved at having an intending purchaser use reasonable business precautions in business dealings. Of course with a majority of our advertisers such precautions are unnecessary. The statements of established houses which have a standing in the commercial world may be implicitly trusted.

### "SEALED CANS."

THIRTY-FIVE years ago, Sir John Franklin, with a company of one hundred and thirty-five men, sailed from England, to attempt a northward passage to the Pacific Ocean.

No survivor of that party ever returned. The mystery surrounding the fate of the expedition has never been dispelled. In the melancholy interest with which the civilized world has not yet ceased to regard it, the Franklin expedition stands alone. It is the great tragedy of the North Land.

Attention has been newly called to the subject by the search expedition of Lieutenant Schwatka, who claims to have discovered in King William's Land relics of the Franklin expedition; and some of the cable dispatches received from England during the past weeks commenting upon these alleged discoveries are of the most startling and unexpected character.

Commander Cheyne, who was attached to one of the former search expeditions, charges that Franklin's men perished, not from Arctic exposure, but from starvation; in short, not to put too fine a point upon it, that they were murdered by the contractor who furnished the canned meats for the expedition. The cans labeled "mutton" and "beef" contained, it is alleged, nothing but bones and offal. And when the official inquiry is held upon the skeleton of one of the Franklin party, which is now on its way to England, Commander Cheyne says that he will reiterate and prove his charges against this contractor.

This, it must be confessed, takes away all the poetry from the Franklin expedition. If these terrible charges of Commander Cheyne can be proven, or if there is ground for even a suspicion that they may be true, the sympathy of the world for the victims will straightway be turned into indignation against the contractor.

The moral of all this is of nearer application than the North Pole.

Every man who seals a tin can, affixing his own signature to assure its genuineness, and then, prompted by his accursed greed for gain, and knowing full well that the possible consequences of his deception may cost human life, deliberately affirms that that can contains one thing, when he knows it to contain another thing, assumes in so doing a tremendous and awful responsibility.

It matters little whether his deception accomplishes its disastrous result among the green fields sought for pleasure or amid the wastes of an Arctic land; it is of little moment whether the true nature of the contents of that can be discovered at once or five or thirty-five years afterward.

**PISCO.**—It was once the custom when public officers had proved unfaithful to their trust, to banish them from their native land; in these days a happier custom prevails, whereby a term of cheerless exile is made a stepping stone to advanced rank. The *FOREST AND STREAM* presents its best compliments to Commander L. A. Beardslee, late of the U. S. S. *Jamestown*, stationed at Sitka, Alaska, and now detached and on his way home to be examined for promotion.

Commander Beardslee's task at Sitka was one of some magnitude, the governing of a mixed population, made up of diverse nationalities and for the most part not accustomed to government of any kind. Something of the nature of this

Alas! the skeletons which cover the prairie are all we have left to remind us that thousands of buffalo used to roam about here. But I am happy to say that I have killed a few of them before they become extinct. This winter I was over in the Judith Basin for several months with the notorious Indian trader Jon Kipp, who was trading for robes and pelts with the different tribes of the Blackfoot Nation—Piegans, Bloods and Blackfeet. The average cost of a good robe was about \$1.75, and as he traded for about 2,000 robes, he will clear between six and seven thousand dollars.

The buffalo were about thirty miles from the Post, and as I had no other way of going I accompanied a camp of Piegans, as like an Indian, slept like an Indian, and found it not very hard living after all. I had heard a great many stories about running buffalo, how dangerous it was, etc., but when we had arrived on the ground, and one fine morning started out for a run, immediately I saw the buffalo I forgot all about the danger, and was as eager as any one to be in the lead. Seeing a little band running off to the right I let the impatient horse go, and was soon pumping cartridges into them with my Winchester carbine as fast as possible, and at the end of the run found I had slain seven. But instead of the usual excitement like that of the Indians, my buffalo were of nearly every age and sex. What dancing and frothing there was in camp that night! The amount of liver and entrails there was roasted and eaten was astonishing, and it was kept up every night till we started back to the Judith.

The Indians and whites in this country are all armed with the Winchester gun, the Indians mostly using the '66 model carbine, and the whites the '66 or '73 model rifle. Any other kind of gun is seldom seen, there being no sale for them in the country. An attempt was made in Fort Benton last summer to introduce the Burgess gun, but three or four of them burst, and one man had his arm shattered, and to-day they could not be given away.

In your issue of March 11 I notice an article on the "Unfrequented Regions of the Adirondacks," by Albert Cornish, in which he says: "The first week I was there I heard a continuous scream regularly every morning about 3 o'clock." Now, I would like very much to know what kind of a noise the animal made. I spent nearly the entire winter of '77 and '78 in the "Tract," Hamilton and Herkimer counties, N. Y.,—which, by the way, has the largest and most numerous lakes and more game than any other part of the Adirondacks—hunting these very animals with fair success, killing three full grown ones, the largest of which measured over eight feet in length. My companions were Mr. Jack Sheppard and Ed. Arnold, whom all your readers know who have visited Brown's Tract.

These men, Sheppard and Arnold, had been panther hunters from boyhood, and their scores of killed will reach pretty near a hundred. They solemnly assert that in their whole experience with the "varmints" they have never heard them scream or make any noise whatever unless they were wounded, and by experience I can affirm that when the latter is the case they can growl fierce enough to cause a person to see his hat, lock his snow shoes together, and fall over in entire disregard of a cocked rifle which, but a second before, he was pointing at the beast. Yes, I am very anxious to hear what kind of a noise the animal made, and if Mr. Cornish will enlighten us he will greatly oblige.

AP-WA-CUN NA.

## UPPER MARIAS RIVER, MONTANA TERRITORY. PROVING A DOG-POISONER'S GOOD CHARACTER.

ABOUT the latter part of August, in the early part of the last decade, the writer and eight or ten friends went to the deer hunt in Rockbridge County, Virginia, near Goshen, on the Chesapeake and Ohio Railroad, where we were placed at different points on the Calf Pasture River, opposite the lower ridges leading to the top of the mountains, down which the deer came to water after being run by the dogs. The driver started in the mountain with the dogs about sunrise, and I had waited at my post until eleven o'clock without hearing or seeing anything that indicated the approach of a deer. I was standing immediately upon the bank of the river—one of those little mountain streams so clear that you can see the bottom and the bottom of the water, and the water was lapping the little minnows playing about in the water. When I heard the bay of a hound in the direction of the woods. Secretly myself behind a large poplar tree, I looked out in the direction of the sound, and soon a tremendous buck leaped the fence about 150 yards from me, into a tobacco patch, and headed right toward me. I stood perfectly still, cocked my rifle, and waited breathlessly for him to jump into the water. But he came not; and becoming impatient and uneasy at the delay, I peered again from my hiding-place, and my charger, as my back as he glided down a washed-out place which ran parallel with the river, about half way between where he jumped the fence and my stand. I watched him, with my gun to my face, until he came out of the "wash-out," about one hundred yards below me. I fired, and at the crack of my gun he dropped, but soon recovered himself and ran about one hundred yards, when the report of a shot-gun, and the excited yell of a member of our party, left no doubt that he had been secured. I immediately went to the spot and found that my friend had shot him dead within a few feet of where he stood, and the noble hound was lapping the blood as it poured from the immense hole in his side.

While we were debating about the best disposition to make of this deer, and knowing that the hound was not one of ours, a gentleman rode rapidly down the bank of the river to us. He soon informed us that the dog was his, that he had been hunting with another party about six miles below us; that he had started the deer at daylight with that dog and two others, and had kept in hearing of him the whole time, well as he could, until he would shoot. After some further parley he took from his sword a coupling, and putting one collar around the dog's neck, and fastening the other to a small sapling, mounted his horse, and requested us to look after his dog while he went in pursuit of the other two who had dropped out of the chase.

Before he left, however, I said to him: "Mr. Mohler, it is not safe to leave your dog here. I understand there is an old man, a still-hunter, just across the river here, who is in the habit of poisoning dogs, and you had better take him with you."

He replied that he hardly reckoned he would undertake to do such a thing right before our eyes, and rode off.

He was scarcely out of sight when this very old man and son appeared, guns in hand, and stood around the deer, talking of the long chase, the splendid dog, etc., complimenting me at the same time on the shot. I had made with the rifle (which had cut the right horn clear off about half an inch from the skull), and then turned their attention again to the dog who was lying in the gap close by. After a little while I saw the old fellow—Davis by name—quietly pull his hand

out of his breeches pocket, and, as a boy shoots a marble, shot something like a chunk of dried beef from his fist into the gap, right at the nose of the dog. As he did so he turned to his son, made some remark about going back to the house, and started rapidly away, followed by the boy. The instant I saw the motion made by him in giving the dog the object, whatever it was that he had in his hand, I made a spring at the dog, but found I was too late to intercept him. He had gotten whatever it was and had swallowed it. I instantly informed my companion of what had happened, and remarked to him, "That's a dead dog!"

About this time we heard our dogs running in the mountain, and I hastened back to my stand, charging my friend to keep right by the dog, which he promised to do. In about half an hour I heard the dog whining and making a good deal of noise, and knowing that as long as he did so there was no chance of deer coming to either of us, I hastened down to where the dog was. Just as I reached him he turned over on his back and had a severe spasm which lasted a minute or two. I instantly recognized the unmistakable signs of strychnine; then another and another spasm followed, and in ten minutes he was dead as a door nail. He had hardly given his last kick when his owner appeared, and I told him what had happened and what I had seen old Davis do.

I never saw a man so crazy with anger in all my life; he vowed he would go to Davis' house and kill him, but after much persuasion he was induced to listen to reason, and said he would do whatever I advised. Whereupon I advised him to go to his camp and get one of his lawyer friends (there being several of that profession in his party, Governor Letcher among them) to bring suit against Davis for this wanton killing of his dog; and we all promised him that cost what it would, we would attend the trial and give our evidence against him. Davis was notoriously sly, although a man of good property, and I thought a verdict, with a large amount of costs which the suit would necessarily entail, would hurt him worse than any corporal punishment that could be inflicted. Mohler did not seem altogether satisfied with this, because, like a great many others, he did not believe that a civil action would lie against a party for the wrong of killing a dog. Upon reaching the camp, however, his lawyer friends told him that they could make out such a case, and promised to bring the suit and prosecute it vigorously without charge.

As soon as they returned to Lexington, Governor Letcher took the matter in hand, and brought the suit, and a great many very sensible people thought that nothing could be recovered. At the first term of the Court I was absent and the case was continued, and so for several terms, until the costs attending the suit (the other witnesses, some twelve or fifteen, having come a long way every time) had piled up above a hundred dollars. At last I attended the court and the trial began.

All the evidence for the plaintiff, Mohler, was heard, Governor Letcher and other distinguished counsel appearing for him. The courtroom was crowded with spectators eager to hear this singular case. After resting the case for the plaintiff the defendant, Davis, was put upon the stand, and denied the whole thing, and swore that he never poisoned the dog in question nor any other dog in his life. Then his counsel, Colonel Moore, called the next witness, Mr. Wilson, one of the most intelligent and influential farmers in the county, who was a near neighbor to Davis. His examination was about thus:

Counsel for Davis: "Mr. Wilson, tell the jury how long you have known Mr. Davis, your opportunities of knowing him, and what sort of reputation he bears among his neighbors as a citizen, neighbor, etc."

Witness: "Have known him thirty or forty years; live very near him. Mr. Davis is a good citizen, and a kind, hospitable neighbor; stands very fair in the community in all his business relations, etc., etc."

Col. Moore's countenance beamed with satisfaction, he looked defiantly at Governor Letcher and complacently at the jury. The Governor raised his spectacles and looked very blandly at the witness:

"Mr. Wilson, do you know Mr. Davis' reputation in your neighborhood as a dog killer? If so, please tell the jury what that reputation is."

Here a little wrangling took place between counsel about the propriety of the question, but the Court permitted it.

Mr. Wilson answered: "Well, sir, I think I know Mr. Davis' reputation in that respect."

"Well, sir," said the Governor, impetuously, "what is it?" Witness, reluctantly but distinctly: "Mr. Davis, sir, has the reputation of having killed and poisoned more dogs than any man in Virginia."

"Take your seat, Mr. Wilson!" and the Governor turned round with the most withering look at the Colonel: "Any more character witnesses, Colonel? If you have, trot 'em out!"

A hasty consultation between the Colonel and his client followed, during which the audience indulged in a hearty laugh at their expense. Presently another witness was called, whose name I do not now remember, and the same questions were propounded to him, with the same answers. After three or four had been examined, with the same results as Mr. Wilson's testimony, the Colonel announced that he was "through," to which the Governor ironically replied, "I would suppose you were." The case was given to the jury after a short argument, in which Governor Letcher produced the most convincing authority that the law of Virginia protected a person in the enjoyment of his property in a dog as well as any other species of property, and the Court so instructed the jury. In a few minutes after retiring the jury brought in a verdict of \$15 damages to the plaintiff for the dog, which carried with it the costs—by this time swelled to a considerable sum by the frequent postponements and the distance which had been repeatedly traveled by the numerous witnesses, all of whom claimed their mileage and attendance every day.

This ended this case celebre by which the doctrine, that the law of Virginia will protect the owner of a valuable dog from the malice and meanness of dog-slayers, was freely announced and publicly vindicated by our Court. The only cause of complaint we had was inadequacy of the damages allowed by the jury for the dog. He was one of the handsomest specimens of the fox hound I ever beheld, and had run that deer from five o'clock until after eleven, on a hot August day, over the roughest of mountains, and was in sight of him when he was shot.

It is hardly necessary to say that this little lesson cured Mr. Davis of his propensity to kill hounds. From that day to the day of his death, which occurred a year or two ago, he not only never killed another dog, but used to show the hunters, who went to the neighborhood to drive deer, the most marked politeness and civility and joined in the chase with all who would let him, every time making public renunciation of his nefarious practices.

Davis' favorite mode of operating on dogs was to— But I ought not to tell this; for old dog poisoners ought not to be taught new tricks. JACQ.  
Staunton, Va.

## Natural History.

### THE FOOD OF THE DARTERS.

PROF. S. A. FORBES, who has been doing such good work on the food of birds and fishes of Illinois, has been investigating the gastronomic tastes of those little fishes of the family *Etheostomidae*, or "darters," which are found in most all small streams, and attract attention from the most casual observer by their singular mode of progression on the bottom, and which gives them their popular names of "Johnny darter," "sand darter," etc. Prof. Forbes publishes his observations in the *American Naturalist* for October, and begins by saying:

"What the humming-birds are in our avifauna, the 'darters' are among our fresh-water fishes. Minute, agile, beautiful, delighting in the clear, swift waters of rocky streams, no group of fishes is more interesting to the collector; and in the present state of their classification, none will better repay his study. Notwithstanding their trivial size, they do not seem to be dwarfed so much as concentrated fishes—each carrying in its little body all the activity, spirit, grace, complexity of detail and perfection of finish to be found in a perch or a 'wall-eye pike.'"

His observations were based upon a study of the contents of seventy stomachs, which represented fifteen species, collected in all parts of the State, in several months of four successive years, which he considers to fairly exhibit the food of the whole family at different seasons in twenty-nine localities, as the different individuals, taken at the same date and locality, agreed so closely in their food that the study of two to five gave all the facts obtainable from more fishes. The "sand darter" (*Pleuraphys*) is comparatively rare in Illinois, as there are few sandy streams. Seven stomachs were remarkably uniform, containing only the larva of small diptera and Ephemeroidea, eighty-one per cent. of all being larva of Chironomus, a gnat-like insect, twelve per cent. larva of other diptera, and seven per cent. of May-flies.

Twelve specimens of the genus *Alcedo*\* exhibited

\* The classification used is that of the second edition of Jordan's "Manual of the Vertebrates."

seventy-five per cent. of May-flies, and the remainder was larva of dragon-flies and Chironomus; while twelve specimens of the genus *Belostomatidae* varied only the appearance of fifteen per cent. of cases, or caddis worms (larva of *Phryganetidae*). Other genera differed but little, perhaps with the season, until we come to *Percina caprodes*, which showed a preference for a crustacean diet by containing "thirty per cent. of Entomostraca and three per cent. the smallest of our Amphipoda, *Allochroetes dentata* (Smith), Faxon. Most of the Entomostraca were *Cladocera*, including *Daphnia*, *Eurocerus* and *Daphnia*.

"Here occurred the only instance of molluscan food in the group. One specimen had taken a few individuals of *Anodonta imbecilis*, Say. Reduced ratios of Chironomus and Ephemeroidea larvae, and a few *Corixia tumida* complete the list.

"Last and least comes *Microperca punctulata*, represented by nine specimens from four localities in Northern Illinois. This smallest of the darters shares with *Percina*, the largest, the peculiarity of crustacean food, which made up sixty-four per cent. of the total. The principal kinds were Cyclops, Chydorus, young *Gammarus fasciatus*, Say, and young *Crangon gracilis*, Smith. The remaining elements were Chironomus larvae (thirty-four per cent.) and a trace of Ephemeroidea (two per cent.)."

"It will be seen that the family, taken as a whole, divides into two sections, distinguished by the presence or absence of crustacean food. This is easily explained by the fact that *Percina* and *Microperca* range much more freely than the other genera—being frequently found among weeds and Algae in comparatively slow water with muddy bottom, while the others are rather closely confined to swift and rocky shallows."

Prof. Forbes plainly shows how these small fishes are only fitted to dwell in the smaller streams by keeping down their size, while, at the same time, they are by their habits able to hide from enemies under stones, and live in a current so strong as to require great muscular power to stem it, but which they avoid by hugging the bottom in the neighborhood of sheltering stones, and he concludes by saying:

"Perhaps we may, without violence, call these the mountaineers among fishes. Forced from the populous and fertile valleys of the river beds and lake bottoms, they have taken refuge from their enemies in the rocky highlands where the free waters play in ceaseless torrents, and there they have wrested from the sublimity nature a more lively living. Although diminished in size by their continual struggle with the elements, they have developed an activity and hardihood, a vigor of life and glow of high color almost unknown among the easier lives of the lower lands."

ORNITHOLOGICAL WORK IN THE WEST INDIES.—A new bird is reported from Mr. F. A. Ober's recent collections in the Lesser Antilles, making the twenty-second new species obtained by him from that region. It will be described shortly by Mr. G. N. Lawrence, who has identified and described all the new birds of former collections. It is a species of *Icterus*, and has been (provisionally, at least) named in honor of its discoverer, the *Icterus Oberi*. Besides this new species there are among the specimens many rare and unlooked-for species. The notes relating to them will probably be published (as heretofore) in the "Proceedings of the National Museum." The types of all the new birds discovered by Mr. Ober are in

the Smithsonian Museum, and likewise a full series from each island of the Caribbean chain of the Antilles.

With the material now on hand, Mr. Ober has at last accomplished the object of his three-years' labor, and is enabled to fill a gap which has until now existed in our ornithological knowledge of the West Indies. Maynard's "Birds of Florida," Cary's "Birds of the Bahamas," and Mr. Ober's notes on the birds of the Lesser Antilles, constitute valuable additions to our exact knowledge of avifauna of the South, extending over twenty degrees of latitude.

It is a matter of congratulation that the United States has received the benefit of the explorations of these young naturalists, especially as most of them have been carried on in islands owned by other nations.

English naturalists have noticed this, and, while regretting the fact that their own collectors had not availed themselves of these rich fields, have given our American workers their full meed of credit.

#### BURRS AND BURRS.

THAT one is never too old to learn is a saying as trite as it is ancient, yet every now and then in one's experience some occurrence will bring the truth of this aphorism before our minds as strikingly as if it were a new idea. Especially is this the case when we find, as sometimes happens, that we have for years, perhaps from childhood, attached a wrong meaning to some very common word. The shock which a man feels when by some accident his blunder is revealed to him, is a severe one; and the thoughtful person is by such an occurrence taught more than ever to distrust his own ideas of things, unless they are founded on an absolute knowledge of facts, and to guard himself well against expressing too decided opinions. Such reflections as these are apt to occur to a man after he has been wronged in a controversy, because one of his premises was wrong, or when he has written a telling essay which was to reform the world and demolish his adversaries, but in which his facts were not facts at all but assumptions. We should none of us be unwilling to acknowledge our ignorance. No one man can know it all.

We feel bound to confess that our ideas as to what constitutes the burr of a deer's horn have been apparently all wrong. In a recent article in the columns of a contemporary author, speaking of a discovery by Prof. Cope in relation to the burr on the horns of certain Pliocene deer, marks the word burr with an asterisk, and adds as a foot-note the following truly luminous sentences:—"Burr or burr stone"—A nearly pure siliceous rock, in which calcareous and other matters, originally forming part of it has (*sic*) been parted with and become replaced by silica, so that the casts of fossils are perfectly preserved in it." See Ruschenberger's Natural History Vol. II. p. 29, of Glossary."

The information thus conveyed while most interesting to the non-scientific reader will impress itself no less on the paleontologist who learns now for the first time that the antlers of the deer of the Pliocene were ornamented with "nearly pure siliceous rocks in which calcareous and other matters originally forming part of it, has been parted with, and become replaced by silica, so that the casts of fossils are perfectly preserved in it." Just fancy how odd the deer must have looked with these great lumps of rock on their horns, though perhaps, after all, the lumps may not have been large. Ruschenberger's Natural History does not tell us that. And how strong the animals' necks must have been to have supported this great weight; what an enormous development of the *ligamentum nuchæ* must have taken place to support this weight, as well as of the other muscles of the neck. We can fancy that the Pliocene man, if with Prof. Whitney we accept his existence, must have had a decidedly exciting time in an encounter with a wounded deer whose antlers were thus furnished. What chance would the man of to-day have if a cartload of rocks were hurled at him, each individual stone moving at the rate of a charging deer. How would any of our readers like to withstand the charge of a deer with a millstone about his neck? No doubt when the supposed Pliocene man did succeed in killing a deer, whose horns were adorned with this "pure siliceous rock" he carefully preserved the head, and taking it home had it mounted by a good taxidermist, and then hung it in his hall or dining-room, and the "cast of fossils perfectly preserved in the nearly pure siliceous rock" unquestionably added greatly to its beauty. When the Pliocene man had friends to dine with him, he no doubt called their attention to these points in the horns, and told the story of the hunt, with great eloquence, but with becoming modesty. We had a vague idea that the antlers of the living *Cervidae* were furnished with burrs, but we presume that we were wrong. At all events, although we have killed in our day a good many deer and elk, we have never found one in which there was to be seen anywhere on the antlers any "nearly pure siliceous rock, in which calcareous and other matters has (*sic*) been parted with and become replaced by silica, so that the casts of fossils are perfectly preserved in it."

Truly we live and learn.

A YOUNG GUINEA FOWL.—A correspondent, "H. H. C.," of Bristol, Conn., sends us for identification a "quail" shot near that place by Mr. Everett Horton. There were six of the birds together, and they were feeding with a flock of chickens. When they flew up one was shot, but Mr. H., thinking that they were young turkeys, refused to shoot any more of them, not knowing what they were. The one sent us, which is little less in size than a quail, is a young guinea fowl.

JOHN KRIDER'S COLLECTION.—During a late visit to Philadelphia, we stopped in to see our veteran friend, John Krider, corner Second and Walnut streets, and were shown his grand collection of bird skins and eggs. Without attempting to enumerate their great number, and what he has, we may state that he has 720 to 750 varieties of skins and eggs, ranging from the eagle, hawk, owl, woodpeckers, warblers, flycatchers, shrikes, buntings to water birds, both vaders and ducks, and a complete assortment of game birds. Truly his collection is an interesting one. We found Uncle John in the midst of arsenic, scalped in hand and a beautiful woodcock before him which he was skinning. Our old friend has written and published a little work entitled "Forty Years Notes of a Field Ornithologist," in which he gives a brief sketch of every bird he has himself shot and whose eggs he has collected.

MORE QUAIL BREED IN CONFINEMENT.—*Catskill, September 27.*—Editor *Forest and Stream*.—Some two years ago I brought from the West quite a number of quail, and in the spring I turned out all but two pairs. The two hens which I kept laid over fifty eggs, which I set under bantam hens, and forty-five hatched out. I had them all in a yard, but one day I took them into the kitchen, and the door being left open I lost most of them. After I took the eggs from the quail one of the hens had hatched out twelve fine young ones. Last spring one of the boards got off from the coop and I lost all of them, old and young. I had left fifteen eggs, and these I set under a little hen, and eight hatched out. They were very fine strong birds, and were nearly grown when one night the rats got in and killed them all. I leave for the West soon, will bring more quail home with me, and will try once more. I think I can raise them without any trouble.

B. F. CONKLIN.

POINTS IN THE ANATOMY OF SNAKES.—In a recent lecture upon "Snakes," by Prof. Huxley, at the London Institute, the speaker called attention to some peculiar arrangements in anatomical construction and jaw-bones, in illustration of the fact that the snake cannot be properly said to swallow its food, but seizes hold of it, gradually working it down its throat at its leisure. For this purpose a fully developed and effective saliva apparatus is required. The poison bag of the venomous snakes is nothing but a modification of the salivary gland of the harmless reptiles. There are instances in which they are almost identical. Another instance of the close relationship was shown in the fact that the sharp channel needle by which the poison is conveyed is nothing more than a development of the tooth which dangerous reptiles possess in common with harmless ones. The fact that the salivary gland was the poison receptacle of venomous snakes and animals affected with rabies appeared to Prof. Huxley to point out the direction wherein lies the solution of the problem of snake poisoning and a possible antidote against it.

SOME HABITS OF THE SEAL.—The following extract, taken from one of the letters of the New York *Herald's* Arctic Correspondent, conveys some novel information in regard to the habits of the seal:

The female seal in the early spring builds a habitation in the snow over and around the hole through which it breathes, and here its young are born and live until old enough to venture into the water. This house is called an oglov, and is constructed very much like an Esquimaux igloo in shape, though it is more irregular and has ramifications that extend to neighboring holes. These oglovs are found with the assistance of dogs, as previously described, or by prodding with a seal spear the hillocks of snow that look like seals' houses. When a hunter finds an oglov during the season that the young seals are living in them he immediately breaks in the roof with his heel in search of the little one, which usually remains very quiet even when the hunter looks down and pokes his head through the broken roof. The young seal is then easily killed with the spear and dragged out on the ice, and the hunter waits for the mother, which is never absent long time from its baby. The young seal is generally cut open as soon as killed and its little stomach examined for milk, which is esteemed a great luxury by the Esquimaux. When young the seal is covered with a long white hair, very much like coarse wool. This skin was at one time very much used in making clothing, but lately has not been much in vogue among the natives, though occasionally coats and trousers of this material may still be seen. The whalers esteem it highly as an adjunct to woolen clothing, as being sufficiently warm for those who are living on shipboard, yet not so warm as reindeer clothing, which becomes oppressive in high temperature.

FOOD OF SNAKES.—*Sing Sing, N. Y., Sept. 24.*—One day this summer I was fishing on a bridge that crosses the Croton River near Sing Sing, and I noticed a commotion in the water where I had some perch on a string to keep them fresh, when I saw a large water snake trying to get one of the fish off the string, and after watching his efforts for some time I killed the snake with my fish pole.

#### Fish Culture

OLD FISHING ITEMS.—In looking over the files of the *Republican Watchman*, of Greenport, Long Island, for some special information, we came across the following items which we thought worthy of putting upon record. The dates in parenthesis are those of the issue of the paper in which they were found:

(May 20, 1875). Large quantities of menhaden have been caught by the fishermen during the last week, most of the gangs taking 100,000 or over in a single day. Although of fair quality the fish do not yield as much oil as their appearance would seem to indicate.

(May 29, 1875). The *Stonington Mirror* says that during the past month over 100 tons of fish were shipped to New York each week from Noank.

(Oct. 9, 1875). Mr. Blackford says the amount of fish used in the cities of New York and Brooklyn in one day, say Friday, is as follows: Haddock, 200,000 lbs.; codfish, 30,000; bluefish, 15,000; striped bass, 2,000; fresh mackerel, 20,000; halibut, 100,000; Spanish mackerel, 2,000; refrigerated salmon, 9,500; miscellaneous fish, such as butterfish, weakfish, etc., 25,000 lbs. Lobsters, 100,000 lbs.; 200 gallons of scallops; 200 dozen soft crabs; 1,000 lbs. green turtles for soups and steaks.

(Nov. 27, 1875).—According to the *Express*, Capt. Benj. C. Payne, of North Haven, Sag Harbor, on 50 acres of water, grew 5,100 bushels of corn, worth 40 cents per bushel, \$2,040; grew 15,000 tons of stable corn, at \$8 per ton, \$8,400; in all \$2,840, manured with fish scrap. Capt. Payne and his son Gilbert have also carried on the rendering of oil from menha-

den, having tried out 7,500,000 fish, from which they in 27,520 gallons of oil, sold at 40 cents per gallon for \$10,000, and have on hand 800 tons of scrap, valued at \$10,400.

(May 18, 1875).—On Monday porpoises having driven a vast body of menhaden into Mattituck harbor, the Crow Fishing Co., of which Andrew Cox is captain, made a haul of their seine (one and a quarter miles long), and enclosed drew to land not less than 800,000 of the fish, most of which were very fat. Farmers have since been busy carting away to place on their fields as manure. This is the largest ever made at that place, but at other points on the river bay hauls of 1,000,000 or more have been made in former years.

SPEARING FISH ON SPAWNING BEDS.—*Rochester, Sept.*—A great deal of damage is done by the farmers and men living in the vicinity of our inland waters by spearing while they are on their spawning beds. The fish come to the shallow water and on the shoals to cast their spawn, and are easily seen and speared at night by the aid of a jacklight. Large numbers of salmon, trout, black bass and other fish, killed at a time, above all others, when they should be left alone. The last thing a farmer would think about doing would be to kill his sitting hens. The result of such a course would be no chickens, and a continuation of such a practice would soon exterminate them. This rule applies to fish as well as fowls. The salmon, trout and white fish cast their spawn during October and November, the black bass from June until July 10. Oswego bass from March 10 until June 10, the walleyed or yellow pike from April 10 until May 20th. It seems to me that all fishermen cannot fail to see the great importance of protecting their fish during the time they are on their spawning beds, and that it is for the interest of all and to do what they can to accomplish this end.

SETH GREEN.

FAILURE OF THE OYSTERS-SPAT IN HOLLAND.—A correspondent in Holland writes us as follows: "I have been on an expedition trip to the Zander-Zee on account of the oysters and winkles. I was only three weeks there, and if I had assurance what fishing in breeding time can do I had found the oysters looking over all the oyster beds. I have only been able to find two spots this year, and this is an excellent year for spat. Wherever will be restored we can commence by closing the fish entirely for at least five years."

BLACK BASS IN PEACONIC RIVER.—At the recent fair of Suffolk County (N. Y.) Agricultural Society, held at Suffolk, Long Island, Mr. H. D. McGovern exhibited his man carp, gold fish and black bass, and at the close of the exhibition he very generously donated the bass to the people by placing them in the Peconic River, where they are well known. The carp attracted much attention, and were left there to stock some ponds.

CARP IN COLORADO.—The carp which were distributed Colorado last December are reported as doing well, and W. E. Sisley, one of the Fish Commission, has just finished distribution of the second lot of mirror carp which were received from Prof. Baird.

ALEWIFE CULTURE.—The Belfast (Me.) *Journal* says large number of alewives are passing down the fishway, Penobscot River from the spawn put in Sebago Lake, our fish commissioners the past season."

#### FISH IN SEASON IN OCTOBER.

##### FRESH WATER.

Graying, <i>Thymallus triolus</i> .	Black Bass, <i>Micropterus</i> (species).
Maskinonge, <i>Esox nubilus</i> .	Rock Bass, <i>Ambloplites</i> (species).
Pike or Pickerel, <i>Esox lucius</i> .	Wal-mouth, <i>Channa nigrilabris</i> .
Pike-perch (wall-eyed pike), <i>Stizostedion americanum</i> , a greenish one.	Carp, <i>Pomoxis nigromaculatus</i> .
Yellow Perch, <i>Perca flavescens</i> .	Bachelor, <i>Pomoxis anodus</i> .
Spot, <i>Leiostomus xanthurus</i> .	Chub, <i>Semotilus corporalis</i> .
White Bass, <i>Roccus chrysops</i> .	

##### SALT WATER.

Sea Bass, <i>Centropristis atrarivs</i> .	Sea Trout, <i>Cynoscion regalis</i> .
Sheepshead, <i>Archosargus probatocephalus</i> .	Crankfish, <i>Cynoscion nebulosus</i> .
Porgy, <i>Scenopoma argentea</i> .	Sucre Whiting, <i>Merluccius</i> (species).
Striped Bass, <i>Morone saxatilis</i> .	Croaker, <i>Micropogonias undulatus</i> .
White Perch, <i>Morone americana</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
Spot, or Cautleyette, <i>Leiostomus xanthurus</i> .	Spanish Mackerel, <i>Scomber</i> (species).
Spot, Redfish, or Channel Bass, <i>Sciaenops ocellatus</i> .	Cem. <i>Cynoscion regalis</i> .
Tautog, <i>Tautoga onitis</i> .	Monito, <i>Sarda pinnata</i> .
Pollock, <i>Pollachius carbonarius</i> .	Kingfish, <i>Menticoccus nebulosus</i> .

CATCHES TAKE THE FLY.—We are informed in a private letter from Mr. J. H. Dinkins, Fish Commissioner of Texas, that a party of gentlemen while casting the fly in the Pecos, a stream tributary to the Colorado, caught two catfish. This, we think, is the first recorded instance of any of our family taking a fly. Now if it had been a mouse which took we could have had a chance to show; by a short reasoning, how the relations between cats and mice can have developed a similar state of affairs between the latter and the water cats, but as the facts will not permit it in this it may then be in order to consider if cats, recent or prehistoric, ever did catch flies. A careful examination of the descriptions on Cleopatra's needle, now in New York, fails to reveal anything which might be twisted into a confirmation of this proposition.

SILVER BASS.—We have received a letter from Mr. J. H. Wattel, Secretary of the Société d'Acclimation, Paris, stating that about three years ago the Société received from Mr. Begg, of Sag Harbor, near Orilla, Ontario (Canada), a few young fishes which he called "silver bass" and said were fish, grew rapidly to a large size, etc. The fish were about three inches long and are about twice that length now, but as they have been kept in a small tank it is probable they have not reached their full size. Mr. Wattel writes to know what they may be, but we are not familiar with the name, which, Prof. Jordan tells us, is applied both to the

trout lake bass (*Micropterus chrysops*), and the river moon-eye (*Hyporhamphus*), and we therefore ask such of our friends as may happen to know what fish is called "silver bass" in parts of the State to give us their other names—scientific ones, if possible, so that we may inform our friends across the water of the true name and character of their fish.

Our correspondent says that some of them spawned last August in a little pond, and that there are now thousands of fry on hand, but as they have no knowledge of their parents, character or needs, they hesitate about stocking the ponds with them. He writes: "Our fishes are elegant; they have the power of changing color instantly, and have a purple spot near the extremity of the operculum. The color is proportionately short and thick, the belly large, the mouth small, and the upper jaw shortest."

It is possible that it may be one of the worthless "sun-fish" or "pond-fish," but that is, of course, only guess work, and we prefer to hear from some of our readers who know the fish.

**A HINT FOR MENHADEN FISHERMEN.**—The fact that the herring fishing season is scarce—or, at least, is considered worthy of some sort of protection on the other side of the Atlantic—might be favorably considered by our menhaden fishermen, to whom such a thing as giving the fish time to breed has been entirely unknown, or, if known, unpracticed, while they complain of the yearly decrease of their prey. On this point the *Northern Ensign* says, in speaking of it, the great quantity of immature herrings sent this year to the German markets, both from the West and the East Coast of Scotland, has revived discussion as to the desirability of instituting a close time for the herring fishing. "The opinion," says the *Northern Ensign*, "is general that damage is done to the regular fishing by breaking upon the shoals when they are forming in the early part of the season; and it is this view of the question which chiefly presses home upon the fishermen as most specially affecting their interests. Then, in the second place, it is only too well known that harm is done to the market by offering as the first fruit of the fishing season an unripe inferior article, which the buyer rejects as soon as he gets something better, and which is apt to depress the tone of prices after the superior commodity has arrived." Commenting on this the *London Field* remarks: "Fishermen and fishermen, it is believed, would acquire in any reasonable arrangement, and one contemporary suggests that the close time should extend on the West Coast from the beginning of April till about the 30th of May, and on the East Coast from the beginning of May till the middle of July."

**RED SNAPPER.**—A "red snapper," *Lutjanus blackfordii*, was caught off New Jersey last week, an extreme northern point for this fish to visit.

## TROUTING IN WEST VIRGINIA.

NOVEL MODE OF ANGLING.

**AS FOREST AND STREAM** should be advised of all that pertains to "the gentle art," I venture to give a few notes of a recent expedition to the wild streams of the mountains of West Virginia.

The party consisted of self and friend, an expert from the "Debatable Land," who had cast flies for trout and salmon in every English and Scottish stream, and as keen-scented for game as any of his forebears who rode within the bounds of Arundale. We left the Valley Railroad at Strasburg in Allegany Co., Va., and on horseback, traversed three or more mountains. After eight hours in the saddle (the trip might be made more comfortably by vehicle on the Moorfield Pike), we reached Wardenville, twenty-five miles distant, in Hardy Co., West Virginia. Wardenville is a good place for operations on three famous streams: Walt's Run, Trout Run and Capon River. Each of these streams has its valley, and they converge a short distance below Wardenville. The most easterly is Walt's Run, the next Trout Run, which flows through the suburbs of Wardenville, and a few hundred yards northward is the Capon. The Capon, a few miles above Wardenville, becomes for eight or ten miles the "Lost River." Its waters reaching a limestone district, sink, and only a succession of deep pools connected by a feeble current remains. There every mile or two a big spring breaks out, and the Capon resumes its original proportions and name. Up to and above Wardenville the black bass, which have been in the stream only eight years, now predominate.

I will not weary you with a detail of our operations. Enough that our success was not commensurate with our labors. We paid for all we got, which is my experience in trout fishing everywhere. The result of our best day's work was 22 trout for breakfast, none under 11 inches, nor over 14 inches. It was a golden dish, and served to sweeten the pain it cost. The streams were too low, and the water too clear. And this reminds me to report the result of a former expedition, a month ago, by my companion and an inveterate fly-fisher. They had reached Trout River, the most famous stream of all this region for large trout. At the pond near Wardenville, they found the water milky and in first-rate condition.

Big trout were jumping in all directions, but not one would touch fly nor any bait. My moss-tramping friend, believing they could be circumvented by patience and art, determined to devote the day to them, while his companion proceeded upward, whipping the stream, *secundum artem*. But all his devices proving vain, in despair he laid his rod down with a five minnow resting on the bottom, and took out his pipe for consolation. In a few seconds he saw his line violently shaken, and giving it the fatal twitch, he drew out a twelve-inch trout. He repeated the operation, sometimes with live minnows and sometimes with cut bait, and he caught, thus fishing on the bottom for trout, sixteen, none under a foot, and one seventeen inches in length. When his companion returned from his fly-whipping up stream, troutless and disgusted, and was confronted with the sixteen golden beauties and informed of the process of capture, he exclaimed indignantly: "I could not have them on my terms." Yet he forthwith went to bottom-fishing himself; but too late—the trout had quit feeding.

The next day the same party struck the stream (Trout Run) some seven or eight miles higher up. Bad luck attended all their early operations, and disconsolate, they threw their live minnows on the bottom, and sought comfort in the pipe and tickler, when a lucky thought struck a native angler, who was one of the party. "You see that spring," said he, "coming in at the head of the pool; I will go and muddify it and see if that won't make them bite." No sooner said than done. In a short time the riled water made its appearance, and immediately the lines were shaken. The result was twenty-six trout over twenty inches in length. On the following day, at the same place, the same experiment was tried, with a result of sixteen trout of like proportions.

I am vulgarian enough to prefer bass-fishing to any trout-fishing I've ever known—certainly to trout-fishing on the bottom, whatever the results.

One fact is clear and constant, that the trout in the mountains of Virginia and West Virginia prefer black crickets, grasshoppers, black bugs and minnows to the fly, and in Trout Run, Conroy's most artistic fly with reversed wing will cast its shadow on the water in vain. And another fact equally certain is that Mr. Seth Green's cast of eighty-six feet would be a useless accomplishment in all this mountain region. With high reaching laurel and overhanging boughs, the angler will be lucky to make a cast the length of his rod.

One of the trout had in its stomach eleven locusts (17 year), four bugs resembling June bugs, one grasshopper and one minnow, and was taken by an earthworm or lentil. It would be satisfactory to know (if the cause is general) why muddy water prompts the fish to feed. Does it whet the appetite, or is it the apprehension that the water may become too muddy to find food, and they prudently lay in a store in anticipation of an enforced starvation? This would imply memory and reason; but fish may have more sense than some people suppose.

All this region abounds in game—deer, wild turkeys and pheasants in profusion, with now and then a bear or wolf and catamount.

SHENANDO.

**"GRUBS" IN FISH.**—There is a point relative to bass fishing and cooking which I would like to ask the opinion of Dr. Henshall, G. A. S., of Chicago, W. E., of Chicago, and others who know the fish sport these fish give, the following question: "Do the bass they take have worms or grubs under the skin? Are these grubs injurious to persons eating the bass?" We are prompted to make these inquiries owing to a diversity of opinion among some fishermen and naturalists, who were camped up in the woods during the summer.

They fished one lake and caught some big fellows. They took them to camp, cleaned and skinned them, when some big grubs as large as maggots came out of the flesh. Some moss-backers told them that bass having these grubs were unfit for food. They tossed them into the lake, and pretty soon some fish crawled up them and carried them off.

These fish were caught in an inland lake fed by springs, but the water was warmer than the water of Lake Michigan, hence the grubs were said to exist from this cause.

Another day some of the party visited a Lake some miles from their camp that is noted for its fine bass. They caught some good ones and carried them to camp, seven miles, expecting to have a feast free from grubs, because the water was colder and the lake a large one fed by many springs and rivulets.

The fish were put into a spring of cold water (ice-cold), left until morning. When they dressed them they were hard and firm as though they had just come from the water. They found in them the same grubs, about the same size, and when put under a microscope exhibited the same form and manner as the grubs taken from the bass caught in the warmer water of the small lake. The party varied their trout fishing by these occasional days after bass, so another day tried the large lake connecting directly with Lake Michigan, and where bass are caught of large size.

They expected something good from it, because the fish feed on minnows and have abundance of cold, clear water. Their flesh is firm and sweet. The fish themselves are gamy as one could wish, fighting to the last and running up to 43 pounds in weight, but when dressed and skinned the same grubs appear.

I need not say every one in camp felt some compunction in eating them, though the fish were all one could desire when well cooked, yet these grubs were the interesting theme within in camp. Possibly, had the party made less pretense of being scientific, those bass would have been voted splendid; but when these big fat grubs rolled out as large as a wheat grain every one felt some queer sensation in the region of the stomach, and the standing joke was, "How many of those fine fellows did you put away for breakfast this morning?"

We would like to know something of the experience of gentlemen who have taken bass through the many lakes in the Northwest, if this has been their experience, or are these grubs peculiar to the Michigan lakes, where so many of us spend our summer fishing holidays.

I trust I shall not take up too much of your space in asking the opinions of others concerning these parasites. "If such they are."

W. D. T.

Chicago, Sept. 25.

## FISHING IN MINNESOTA.

**A CORRESPONDENT** of your journal, in the issue of Sept. 9, states that Lake Telonka is said to be the best fishing ground in the State. Now, I do not wish to dispute the gentleman's statement, but he wants to tell of something more "fishy" than a string of rock bass averaging one pound to sustain his statement. Besides this, he says they were filled with parasites, and it isn't likely that many persons would eat fish filled with these animals; so they are no better than so much carrion, and I think he is in the wrong when he makes his statement on the superiority of that lake as a fishing ground. If he has traveled through Minnesota, and found nothing better than the aforesaid to tell, he is certainly most unfortunate. Heretofore, we have never told of the rock bass, but we have, but have considered them as an uninteresting little in comparison with our larger and finer varieties. But while we are speaking of rock bass, we might mention the two-pounders and over, that to catch is an everyday occurrence. I have seen rock bass of that size snap at the hooks before they would fairly touch the water, and it would take a much longer time to detach the fish than to hook them. I myself have often caught black bass that weighed 43 pounds, and I know of reliable parties that caught them weighing six and seven pounds, and even higher than that. They were well on the trolling hook and by bait, and I have no doubt that they would take the fly well if given the chance.

Perhaps I am mistaken when I say that Detroit has the

best fishing of any locality in the State, but I will try to sustain my statement, and give a few results of fishing excursions.

One that I took myself in the early spring is especially vivid in my mind. A party of three, embodying myself, started down the little stream, known as the Pelican, about 1 p. m. A ride of about twenty minutes brought us to Muskrat Lake, and although we had never fished here nor heard of anybody having done so, we concluded to try the place as an experiment, and we soon came to a standstill. Before I had thrown my line my fellow fisherman had landed a fine rock bass. I soon followed with another, then we both secured others, and here I lose all recollection of the order in which they came, as fish after fish came tumbling in, black bass, Oswego bass, rock bass, pike, pickerel, perch and sunfish, and—I must not forget—one "bull-head." After wd had caught some forty fish we lifted anchor, and proceeded down the stream until we came to Lake Sally, a beautiful sheet of water about twelve miles around, and here we struck a temporary camp and prepared a lunch. While the other two representatives of our party of three were preparing and frying fish on the bank and the third landed another pike, the fellows among which were a fine pair of Oswego bass weighing over four pounds each. After eating our lunch we proceeded to return, and soon arrived at Muskrat Lake, where the other two decided to walk back while I took the boat. As I was passing over our first "battle-ground" the temptation was too great, and I decided to again try my hand at them, and was soon hauling them in at a lively rate. About the fifteenth fish I decided that I would catch twenty-five before leaving, but unfortunately on the twenty-first fish my hook broke at the barb and soon landed another pike, in position, as I had no other about me. I did not give in, however, and after throwing about a dozen over the boat I succeeded in landing the four necessary to complete my quarter hundred, and started back and arrived at 7 p. m.—six hours fishing—with the following result: Twenty-one black bass, fifteen of which weighed on an average of four pounds; fifteen pike, whose weight I did not test, but which were extraordinarily large; thirty rock bass not "weighing nearly one pound, and filled with parasites," but large, the fellows, some of them tipping the beam at over two pounds; twelve pike; two Oswego bass; one sun-fish, one perch, and one bull-head or mud trout. In all these must have weighed upward of two hundred pounds.

Two other parties, Drs. Carman by name, caught eighteen Oswego bass in Lake Sally in two hours, all with a common spoon trolling hook. They averaged four pounds. A. E. Bowling and R. E. Metcalf took a drive to Floyd Lake one afternoon and caught twenty-eight black bass, several of which weighed six pounds. Mr. Amos Bowman, of St. Louis, Mo., and a brother-in-law of Marshall, Mich., started out at Detroit Lake one day, and soon returned with a half barrel filled to overflowing with some of the finest specimens of the funny tribe that ever man's eyes fell upon. We might go on mentioning other fishing experiences of this kind, but we think we have sustained our statement on Detroit having the best fishing in the State, and if any other enthusiast doubts the same we would be most happy to hear from him, and we will give him our hand in fellowship, agreeing on one point, that there is no place like Minnesota for a person to get his fill of fish.

It.

**A STRANGE CATFISH.**—*Hightstown, N. J., Sept. 27.*—On Friday last I was pike-fishing with two others on Outcall's pond, near Spotswood. When we went ashore for lunch at noon we found the pole sickle and the bank of the pond. On this pole was a line with one wired single hook. It was in plain sight all the time and one went near it until our return, when we found on it two pike, one about twelve ounces, strung through the gills; the other about a pound, hooked in the jaw. The first pike had evidently taken the minnow and hook and ejected them through his gills. The second pike, hooking himself, had drawn the line a foot or more through the gills of the first. This kind of a double catch was so strange that I hardly dared believe my eyes, but being a naturalist I at once took the attitudes of my companions, Messrs. Frederick Parr, and James Scudder, of Cranbury, to the truths of the facts as above stated. Is it not rare? *Ans.* Thos. B. Appleby.

**NEW SPORTING GROUNDS.**—*Tamworth, Ont., Sept. 25.*—I am here in a, so to speak for the sportsman, new country. About thirty miles north of the city of Toronto, and about half an hour, during the next week, have a fair view of them and send you a description, which will probably prove interesting to your readers. I have not succeeded in getting a maskelonge that I wanted for comparison of teeth and vertebrae between pike and maskelonge. Believe me, the latter are not as plentiful as is generally believed.

**FOR FLORIDA.**—It is frequently the pleasant privilege of FOREST AND STREAM to extend acquaintance among gentlemen sportsmen, and in this interest we are called upon to say that a gentleman, a journalist by profession, who with his wife spent last winter in Florida, is desirous of meeting one or two other couples who would like to go to the Gulf coast or South Florida the coming winter, and spend one or two months in gunning, fishing, and having a good time generally. Correspondence is solicited that references may be exchanged and a congenial party organized; and any letters sent to "Scribe" care of this office, will be promptly forwarded.

**CANOE AND CAMERA.**—Mr. Thos. Sedgwick Steele, the author of "Canoe and Camera," the most elegant sportsman's book of the year, is now on a tour over part of the routes described in that volume. In a note written just before he started, Mr. Steele says:

I intend to follow the old course of my book, "Canoe and Camera," until I reach Chamberlain Lake, when instead of turning South into the vast branch of the Penobscot as before, I will follow a northerly course to Eagle and Churchill Lakes and turn east into Spider Lake. From this point through Echo Lake, Agogood Carry, to the Mausegan lakes the passage is difficult, all depending on the state of the water, but the latter lakes once reached, a pleasant and easy passage is open to the Aroostook waters, landing one at the town of Caribou, Maine.

Col. Lyman B. Goff, of Pawtucket, R. I., was the first tourist to make this trip, in Sept., 1879, and will be my companion this year. For the last few weeks I have been practicing with a new camera called a tourograph, and I must confess that I am perfectly delighted with it. No knowledge of photography is necessary, the plates being

furnished all prepared, and the work being perfectly mechanical. I shall take eight dozen plates into the woods, and hope to return with a good idea of the Aroostock country.

## Game Bag and Gun.

GAME IN SEASON IN OCTOBER.

Moose, *Alce americana*. Woodcock, *Philohela minor*. Black-bellied plover, ox-eye. Elk or wapiti, *Cervus canadensis*. *Squatarola helvetica*. Red or Virginia deer, *Vulpes americana*. Turquoise, or calico hawk, *Streptopelia*. Red-breasted snipe, dowitcher. Wild turkey, *Meleagris gallopavo*. *Macropygia grisea*. Pinnated grouse or prairie chicken, *Centurus canadensis*. Great marbled godwit, or marlin. Ruffed grouse or pheasant, *Bonasa violacea*. Whillet, *Sceloporus semelpennis*. Quail or partridge, *Ortix virginiana*. Tattler, *Tringa melanoleuca*. Sora, rail, *Porzana carolinensis*. Yellow-throat, *Volans fusca*.

"This enumeration is general, and is in conflict with many of the facts."

"Lay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf-bird, phalaropes, avocets etc., come under the group *Limicola*, or shore birds. Many States permit prairie fowls (pinnated grouse) shooting after Aug. 15.

## LARGE GAME AT THE WEST.

WE publish below from the London *Field* a communication from the pen of Mr. W. D. Pickett, whose frequent communications to the FOREST AND STREAM have always secured an appreciative reading among sportsmen of intelligence. Mr. Pickett's long life in the country of which he writes, his practical knowledge of the game inhabiting that country, and his general information on all points of the subject under discussion attach a more than ordinary claim for attention to his views. The question of how efficiently to protect the large game animals of the West is one of very great importance, and it is one, too, which is likely to be neglected until it shall be too late to provide a sufficient remedy.

An experience and observation of a good many years as a sportsman, with all kinds of game, more especially for the last four years with the large game of Montana and Wyoming, has led me to infer that most of the useless slaughter for which sportsmen are responsible is done by the novice in each class of sport, whether snipe or elk. When thrown with game he is not accustomed to hunt, he appears seized with that inherent love of killing, common to all men as a rule, and not particularly creditable to "man," on the supposition of his being "the noblest work of God." He is probably also enthused with the ambition of making a big bag, and so comes the slaughter, providing he is sufficiently skillful. When the novelty of the sport wears off he calms down, loses the desire for promiscuous killing, and then squares back on his dignity, and is ready to pitch in and criticize the many who are sure to follow his pernicious example when temptation comes. He holds true especially with large game sport, and it is not safe for one who has not been thrown among an abundance of large game to criticize too severely those who are more fortunate, and shoot off their gun too often. From a humanitarian point of view, it is fully as reprehensible to kill uselessly the smallest sparrow as the noble elk, and it is well for all of us to keep vividly in our mind's eye those grand words, "Lead us not into temptation," and "Let him that is without sin cast the first stone."

However true the above may be, I do not believe the quantity of large game in Montana and Wyoming has been affected by the amount killed for "sport" or for purposes of food. This opinion is entertained by others equally competent to form an opinion. The natural increase of these animals more than supplies loss from that cause. It must be borne in mind, too, that a great deal of useless sympathy is wasted upon the elk and deer, when these large bags are reported. It is well known that the majority of the hunters are elk and deer in a great measure filled by the use of paper pellets, which, while they flatter the vanity and satisfy the ambition of the sportsman almost as much as the leaden article, yet rebound harmlessly from the noble forms of the deer and elk.

The problem of the preservation of the large game of Montana and Wyoming—now the best game districts of the continent—is dependent entirely upon one condition—the price of "pelts." As long as the price of antelope and deer skins remains less than the cost of the hunt, the sportsman and hunter in a great measure, there will be few killed, except for food. When the price rises above these figures, the destruction will go on, in a greater or lesser ratio, in proportion thereto. This can only be prevented by supplying each band of game with an escort of cavalry. Since 1875, in Montana and Wyoming (unless too near the U. P. Road), all kinds of large game, except buffalo, have steadily increased, and simply from the price—the price of skins did not justify the labor of getting the animal, and the price of the animal was given him to that end. The destruction of the buffalo has steadily increased, and has become a factor in the solution of the Indian problem. It is now generally recognized, among those who have studied the subject, that the sooner the buffalo is exterminated, the sooner will the Indian be tamed and compelled to remain on his reservation. As long as the buffalo are abundant, he will not be content with his life there—he will break away and live the free life of the plains, to which he is deeply attached. Accordingly, he is encouraged to destroy the buffalo, and every facility is given him to that end. Look upon the matter simply as a factor bearing upon the civilization of the Indian, there is no question of the wisdom of this policy.

As regards elk, mountain sheep, deer and antelope (the only real game animals), the question of their preservation is a serious one. Early last fall, deer and antelope skins rose in price to 20 cents at the trading stores, and last spring they were 30 and 35 cents per pound; elk, 15 cents per pound. The consequence has been that every unemployed man in these territories, unless too remote from rail or river transportation, who could raise a rifle and had slight skill as a hunter, was out "hunting for skins," for several months during the winter. Those unable to buy the outfit were "staked" by the small traders. Moreover, the winter was unusually cold and stormy; the temperature recording in successive cold spells to 65°, 28°, 20°, and 32°. The cold winds drove the antelope and buffalo from the plains to the north into the Yellowstone Valley, in the mountains where the storms and deep snows in the mountain drove the elk, mountain sheep, and sheep down into the same valley, so that there were unusual facilities offered for their destruction, as will the more readily

appear from the following facts obtained from Walter Cooper, gun and fur dealer of Bozeman, during a recent business trip down the Yellowstone, and from information since from agents. His estimate of the killing, up to the beginning of March, was as follows: 10,000 buffalo killed by Indians, 7,000 buffalo killed by white men, and antelope, 3,000 elk. By multiplying four-fifths of the buffalo by 400lbs., the deer and antelope by 60lbs., and the elk by 300lbs., these interested in food statistics will obtain the total pounds of food destroyed. This is only one district.

On the Missouri and in the country toward the U. P. road the same destruction went on, though it is to be hoped not to the same extent. These figures appear large, but are not much to be wondered at when the country with which the deer and elk, but hunted with cold, are killed, and which would be here described with special permit. From twenty to fifty antelope per day is not an unusual score for a skilled and athletic hunter. Huddled together in the gullies, the hunters, usually armed with Sharp's rifle, by firing into the mass, kills two or three at a shot. There is a pretty authentic record of one man killing (his partner following and skinning) seventy-eight in one day, and six hundred in one month.

The writer for several years past has been the patient listener to every huge bear and hunting story that has been floating around these mountains for the past fifteen years, and flatters himself that, by an almost daily habit of separating the wheat from the chaff he can recognize the genuine article, and yet thinks from the source of information the above stories are substantially correct.

Is there no law to stop this destruction? There is a territorial law protecting game after the first of February, and I believe altogether if not killed for food. The destruction was greatest previous to that date, but continued until the break-up of winter, when the buffalo and antelope scatter on the plains, and deer, elk and sheep return to the mountains. Unless the price of skins goes down to the figures before mentioned, the same story will be repeated during the coming winter. Even were these persons to inform, it would require a regiment of cavalry to make the arrests. This destruction is carried out as a means of living. Many of the men are miners, who work hard all winter to make a "stake" to continue their prospecting operations during the summer, all hoping to strike their "bonanza." A few do, but the many repeat the same routine for years. I heard of two miners of this class a short time since who were offered \$100,000 for one lead. Another party actually sold one lead for \$50,000. And so it goes, the success of one encouraging the flagging spirits of the many. I have rarely known a deer hunter kill an elk or deer for the sake of killing, and except for food it is too old a story—there is no temptation.

In conclusion, Americans, and especially American sportsmen, are always glad to see British sportsmen. In spite of the startling statistics above given, in the language of John Smith, the immortal razor-strop man, "There are a few more left of the same sort." Good sport can be had in these mountains for at least five years to come. Bear and mountain sheep are perhaps more abundant than in any other part of the Rockies, are not affected by the acts of the "skin hunter," and afford the finest sport of all game animals.

The British sportsmen who have visited Montana and Northwest Wyoming have, within my knowledge, been content with very moderate bags, and we hope their example will be followed by those coming after.

As the Utah Northern Railroad has reached the southern boundary of Montana, I am sure the number of English tourists to the Yellowstone Park will soon be materially increased.

## GAME RESORTS ABOUT TORONTO.

HAVE just returned from an excursion to Canada, where I went for some shooting as well as the trip, which was pleasant in the extreme. Toronto was the objective point from which I would go out into the surrounding country shooting, or on the lake fishing, and generally return at night. Very good duck shooting can be had at a small shallow bay called "The Marsh," within a mile of the city, to which anyone can almost go by the water, and in any kind of weather, and with full directions to the moderate sum of 50 cents per day, with full directions to the best place to locate, etc., gratis. Still better shooting can be had on some of the lakes north and east of the city, where wild rice, that ducks love to feed on, grows in profusion. Mr. Rawbone, dealer in guns, ammunition, etc., on Yonge street—a thorough gentleman and ardent sportsman—would, I am sure, be glad to direct any one a stranger there, as he did me, to good localities where game was abundant.

The Muskoka District, about eighty miles due north, is noted for its good deer shooting. Each year parties from Toronto go up there with all the paraphernalia for camping out—though board, hounds and guides can be hired very cheaply—and stay two or three weeks, generally meeting with good success, and feeling well repaid for the journey. The open season did not commence this year until October 1, though I heard of parties killing them in September.

Any one wishing good rabbit shooting would do well to visit Mr. Henry Seymour, at Georgetown, about thirty miles west of Toronto. He keeps a large kennel of fine hounds, and is ever ready to take a hand in the sport. His table, a model of cleanliness and liberality, is calculated to suit the most fastidious. The Canadian bunny differs considerably from our hare, inasmuch as it is larger, and turns white in winter. The season opens September 1, though later on when the cover is not so thick, say toward the latter part of October, is the more abundant, and that applies to nearly everything in the fur and feather line up there. The nearer toward the end of the year the better. The game prospects were never so promising, owing probably to the open winter. There is one exception to this, that is in regard to quail. Some years ago they were very plenty, but suddenly began to thin out and get scarce; then a law protecting them for three years was passed, but at the end of it they were scarcer than ever. What can be the cause of this?

"The natives are unable to explain it. I noticed great numbers of hawks of all sizes, from the cunning little fellow who makes sparrow hunting a specialty, to his larger brother who displays a weakness for chickens. These, in my estimation, contribute largely towards the extermination of poor Bob White."

Board can be had in Toronto for about fifty per cent. less than in New York. At private houses six dollars brings excellent accommodations, and I have been told that for three and a half dollars per week one can find comfortable quarters. The hotels charge about two dollars per day; among the good ones being the American House, which is kept by an American, and is handy to all the railroads and boats.

I will give you a brief sketch of the route I took to Toronto with the attending expenses, which may be of interest to some of your readers. Took the six P. M. train at the foot of Chambers street, on the Erie to Niagara Falls, fare \$0.25 for single ticket; then \$2.00 for a stop-over at Buffalo for breakfast—7:50 a. m. at eight o'clock next morning. Arrived at Niagara Falls about ten, and spent the rest of that day there and the next night. Stopped at the Spencer House—\$2.50 to \$3.00 per day—thence by C. & N. R. R., next morning to Lewiston where connection was made with the steamer Chicom for Toronto. Through ticket from Niagara Falls to Toronto \$1.90. The sail of about thirty-five miles across Lake Ontario is very pleasant when the weather is fine, but when the wind blows pretty strongly the sea gets lumpy, and basins and lemons are at a premium. The steamer arrives in Toronto at half-past two in the afternoon, occupying about two hours in crossing.

A person with three weeks' vacation can make the round trip from New York for about seventy dollars, including a stop-over of a day at Niagara Falls, which should not be missed. Seeing the Falls by electric light at night is alone worth the money the whole trip costs. I was just a little short of twenty-four hours on the road coming down from Toronto, which shows that not as much time is wasted, as most people suppose, in going and coming.

Persons going with the view of shooting should not start until late in October, as I said before. I was there in September, and though I had some very fair duck shooting, was on the whole rather disappointed, being a month too early. Attended the Industrial Exhibition, with which I was much pleased, but was too late for the dog show, which I hoped to see, and intended making the principal subject of this letter. New York, Oct. 8. TIM. BRIDGEMAN.

## PHILADELPHIA NOTES.

WE have about reached the close of our rail shooting season, the cool nights of the past week having had the effect of driving the birds further South. Yet some fair "beats" have been reported during the last run of afternoon tides. One of the Messrs. Sartori, with Benny Badger to push him, killed on upper Tincum fifty-six birds, on a morning tide, in excellent condition. These late stayers are invariably fat and lazy.

The class of the winged variety have not been known to be so plentiful in the Delaware River for many seasons as this, and we learn of good shooting last week at daybreak during the morning flight of the blue-wing.

Next week will usher in our fall season, and many are the trips already planned for a first crack at this prince of game birds. Your correspondent is still firm in his opinion that the open season for quail shooting should not begin until November 1, and intends to wait until the birds in this section are over their running proclivities, and devote his time to woodcock and the ruffed grouse in the Lehigh Valley and thereabout, making his first trip on the 13th of this month, when an account will be given to your readers.

It is not unfortunate that the Philadelphia Sportsman's Club, or, as it was latterly called, the Philadelphia Game Protective Association, has virtually gone out of existence? The charter has been retained, however, and the few of the Vernifuge spirits occasionally call a meeting, when an important subject bearing upon game protection is desired to be discussed.

Nothing is ever heard of the Philadelphia Kennel Club, which gave such a grand bench show shortly after its organization. We doubt if there ever appeared at any show such a great display of setters as at this, and it is hoped a second may be held under the same patronage.

The great improvement in our native breed of setters, owing to the importation of the best English dogs during the past few years, and the consequent introduction of this blood, may be readily noticed on our streets by the lover of the canine race. At least one-half of all the setters seen following at the heels of their masters show the unmistakable form, in part, of the improved strain. This, mingled with the rugged, sturdy old native dog, seems to give us precisely what is wanted for our varied shooting.

A pup of the well known manner of a very novel shoot, indulged in by a friend a week or two since—that of killing our common sora rail over the point of his setter. While in quest of snipe in the meadows near Darby Creek, he found his dog continually stopping and pointing stiff on the margin of the numerous ditches intersecting the low piece of ground he had found. Upon kicking in front of his dog's nose what he supposed would be found a mouse or a sparrow. He pulled the rail over, and in the manner of a very novel shoot, indulged in by a friend a week or two since—that of killing our common sora rail over the point of his setter. While in quest of snipe in the meadows near Darby Creek, he found his dog continually stopping and pointing stiff on the margin of the numerous ditches intersecting the low piece of ground he had found. Upon kicking in front of his dog's nose what he supposed would be found a mouse or a sparrow. ## DUCK SHOOTING AND DOG BREAKING.

I HAVE just returned from our marsh club grounds which lie on the Lake Erie between what is called Warlick's Canal and Crane Creek and is said to be the best mallard and black duck grounds on the lakes.

I found our keeper and his wife, just settled in their cosy quarters and our rooms all in readiness, bunks all made and a fire in the stove, and dinner was on the table when I arrived. I spent three days ducking over the marsh, mostly laying out work for the men, clearing the different channels from the pond holes and getting boats, decoys, set poles, oars, etc., in time for our boys, who, as we are I could tell where it fell. He hunted a while, and could not find him. I urged him on, and by-and-by he commenced going round in an open space. I knew the bird was buried and hiding, so I ordered him to dig it out. And he began at the grass and mud and it flew, and so did the bird, or rather jumped out—but the dog had to dig so deep, all I could see of him was his back and tail first. Well, after chasing a yard or so, he got him and brought him in. The next day I went out at 6 A. M., and after getting through with the channel digging I got in a blind at 9 A. M. I fired a mallard which I shot, and he fell dead on the bank forty yards to the left. When he stuck I knew from the sound he was in a mud bed. Ned marked him as well, and at my command away went the dog, and stayed a long time, over ten minutes. I thought he was tired, and was just going to start in after him when he stuck his nose through the rice, but no bird; he looked very meek and sheepish. "Go fetch dead bird," I said. He turned and went in again; was gone about three minutes, and came poking his nose in again, looking very sneaking. "Now, Ned," says I, "go and get that bird, and no more money business, do you hear? I'll fling you if you do not," and cracked my whip. Away he went, and in the next minute he returned, and no bird yet. "Confound your picture all treckled," says I. "Go and get that bird, do you hear? or I will make a sieve of you." I dropped my hand to make for the gun. He knew, and turned back, and in a minute I heard the water splash and saw him going across the pond below toward the house. I let him get on the other side, and just as he started on the bank I fired (calling him first) about ten feet ahead of him. He knew then that I meant business, and he came back to the boat very penitent. I wanted to laugh, but looked fierce, and showing my whip, said: "Now, once more, you go—that—duck, and do not come back without it. You know where it is and are too stubborn to dig it out." He jumped the boat; was gone not five minutes, and came back and poked his nose again through the grass. This time he had the duck; but all of dirty ducks and dirty dogs, covered with black mud, you never saw. But the proud, snobbish look, and the air of his head, he brought me back to my senses. "There, I got him; it was hard, dirty work, but I found you meant his, and so I had to do it." If ever a dog got a good washing and dry rubbing, and a good meal, he did, and now he is just crazy to retrieve all the birds, and works splendidly any distance.

I flatter myself I am quite a breaker. This is a long and tedious story, but I was so proud of a dog that was so cunning and so stubborn, and yet sensible enough to know his master's will, and run to him when he found the duck the first time, I knew, but was too foolish or lazy to dig it out—see? that I could not help inflicting it on you, knowing you a thorough lover of a good dog.

Toledo, O. A. C. N.

## CORNFIELD DUCK SHOOTING ON THE RIO GRANDE.

IT is seldom that the average sportsman has an opportunity to complain of too many ducks, but during the "duck season" here in winter, they are certainly too numerous for real sport, though just right for the "pot-hunter." But taking the season between June and October, when the "winter ducks" are north on their breeding grounds, and when we have but one species here, the *Desautels autumnalis*, of authors, or the "cornfield duck" of the natives, then is when the true sport comes in. Suppose we take a trip to-morrow morning—the reader and myself—and we will see what we can get. There is no rushing about at two o'clock in the morning, a hasty breakfast and a five-mile drive or so, as is often the case in the East, but we get up leisurely—everything is done leisurely here—have our coffee, and before breakfast we will leave for the field, which is no further off than "Wag, gun-shots. Arrived, the water, but upon the edge of the grass. This is quite like an old cornfield turned out to a meadow. There is quite a lake, and there are pools of water everywhere, and where there is dry ground the grass must be a foot or two high—and where are the ducks? I can see one." Well, we have just had an overflow in the river, and when it receded it left this lake, and this year the flood came so quickly that it drowned most of our crop, and so this field is a perfect paradise for the ducks. You must remember that the habits of the cornfield ducks differ from those of other ducks; they never light right in the water, but upon the edge of the grass. This is why you do not see any, but they are here and pulling the husks from the ears and having a glorious feast. But hark! do you hear that loud, clear whistle? and look! there is a pair just barely in sight. So loud and clear is their whistle, which is almost continually kept up, that it can be heard nearly as far as they can be seen—you can hear for yourself that it has not the least resemblance at all to the "quack" of most ducks. Now, listen and hear the ducks that are already feeding among them, a pair here, a pair there, the fact they are scattered all around, and the beauty of it is they are only in pairs; seldom will there be more than two together while feeding. But here is the pair we heard first.

We can hardly call them handsome, but what showy birds they are! long and lean, with long reddish necks, with exceedingly long white legs and feet that reach out so far beyond their tails; and then that white patch which covers most of the upper side of the wing, contrasts very well with the color underneath, which is black; and there, they have it!

We will start in here anywhere. We are sure to strike some. See! there go a pair the first thing. You never dreamed you were so near any. And how pretty they rise out of the tall grass, keeping close together and rising well up from the ground. Here goes for a double. If you killed both, all right; if neither, why, better luck next time; but if one, you will very likely get a good shot at the other as it comes back flying high in the air to take a last farewell look at its unlucky mate.

But our shot has started every duck within a hundred yards of us. There must be twenty in the air. Some, of course, will leave the field, but most of them will settle down again. Even if they should all leave others will keep arriving, and so the sport continues as long as we care to keep it up, or until the sun gets too hot for us to stand it longer.

But these ducks are poor eating. They are never fat, and do not begin to compare in flavor with our fine mallards and teal in winter, and one will soon get tired of them for the table.

## ECHOES OF THE "DITTMAR SPORTING POWDER."

EDITOR FOREST AND STREAM:  
BELLVIEW, MICH., Oct. 10.—Thanks for that "Dittmar" exposé; think I will not invest in it; was going to try it up North on partridges.

C. I. I.

CARRO, GA., Oct. 4.

Editor Forest and Stream:  
I am glad to see that you have taken up the Dittmar Powder, and have given the sportsmen of America a little light on a subject which certainly needs it.

A. W.

PHILADELPHIA, Oct. 10.—Editor Forest and Stream.—You have done nobly in knocking down that absurd fraud, Dittmar powder, and you deserve the thanks of every sportsman in the country; please excise mine now, and believe me truly yours.

C. E. C.

MANCHESTER, N. H., Oct. 7.

Editor Forest and Stream:  
Please find inclosed four dollars to pay for the FOREST AND STREAM to May 12, 1881. Being an old man, and being unable to follow my favorite pursuits of hunting and fishing, I had concluded to discontinue the paper, but the articles on the Dittmar powder and its manufacture have pleased me so highly that I, for one, have no objection to the publication of the sportsmen, will "read, mark and inwardly digest" these articles for their enlightenment and safety, for we have had enough of the imposition.

A. G. D.

HUNTING DEER IN MAINE.—The following comes to us from a responsible source, under date of Mopang Lake, Washington County, Me., October 4:

A week ago a professional guide and hunter arrived at this lake to put the camp in order for the reception of Bangor sportsmen (?), who are now almost daily arriving with hounds to slaughter deer contrary to law. The bringing of hounds in covered carriages, escorted from sight, indicates fear of the law and its penalties, or, it may be, a sense of shame. Of course, in due time, the venison will be sent out under cover of darkness, as usual. The county warden has been notified, and, let us hope, will take prompt means to vindicate the law.

The Maine law provides that "no person shall hunt, kill or destroy with dogs, any deer or caribou within this State, under a penalty of forty dollars for every such caribou so killed or destroyed." We have already taken occasion to highly commend the efficiency of the present commissioners of fish and game, Messrs. E. Stillwell, of Bangor, and Everett Smith, of Portland. As these parties referred to by our correspondent come directly from one of the centres of authority, we shall look for the speedy detection, conviction and punishment of the offenders.

PACIFIC COAST NOTES.—The game resources of their respective localities are a never-failing fund to the Pacific coast paragraphs. The Sacramento River man has been out after quail, but he reports only cats: "While quail shooting near Folsom, recently, we saw a common house-cat out in the woods several miles from town, and were informed that they are numerous in the foothills, where they live in a wild state, subsisting on birds, etc." It is said that they are very destructive to broods of young quail, and the sportsmen shoot them whenever possible." We commend to his attention the article on the subject lately published in this journal. Another complaint which we find in the same paper comes from a correspondent in White's Valley, who describes a pack of hounds which go off deer hunting on their own account, scouring the hills day and night in season and out of season, pursuing the deer. A party of public spirited gunners might with good effect turn out to hunt the hounds. Humboldt sportsmen report good duck shooting on the Bear River. Carson deer hunters bring back excellent reports of deer hunting in the mountains. Quail are plenty in the foothills about Santa Cruz and also in the vicinity of Truckee. Mrs. Ari Hopper, who is reported to be the greatest deer and bear slayer in Southern California, killed a large eagle last week in Ventura county which measured seven feet two inches between the tips of its wings. She also killed a large rattlesnake the same day. Visitors at Lake Tahoe are few now. The Grand Central will close for the season in about two weeks. Yet this is about the pleasantest part of the year to visit the lake. Fishing is good and the weather is still delightful. Deer are plenty about New Tacoma, W. T., and a farmer two or three miles from that town has been obliged to harvest his oats before they were fully ripe to protect them from the deer. Game, especially deer, is abundant in El Dorado county. San Francisco papers report that toward Santa Rosa, Healdsburg and Clearlake, and north of Petaluma and around Napa, the shooting is said to be good. Toward Mount Diablo the birds are said to be scarce. There are no reports of big bags from the best shooting grounds near the city. Further out, though, some of the well-known shots have been busy. Mr. Stackpool and three friends are accredited with having killed 450 quail in three days near Niles. On the Throckmorton ranch last week Mr. Orr made a bag of 77 in one day with 100 cartridges. He found the birds very backward, but plentiful. Near Bolinas and Danville the quail are more advanced. In Holme valley and Walnut creek they are small. Rail are plentiful down toward San Bruno, and with a good dog and a fair amount of industry a good bag can be made. But then rail

hunting is very slow work where quail, no matter how small, can be had. The ducks that have come to market are in fine condition, and they appear to be scarce.

Truckee hunters have had very good abundance sufficient to satisfy the most ambitious of them. The *Republian* of that town says: "The mountains have a variety of game sufficient to satisfy sportsmen of almost any taste. Grizzlies and cinnamon bear can be found on very short notice, by those who have lost any bear. Mountain quail can be heard whistling on many a hillside. Grouse are plentiful if their resorts are discovered, while deer, squirrels, woodchucks, badgers, foxes, wolves and lions are common in different sections. This season game of most kinds is more than usually plentiful. The Indians are having a prosperous season." We frequently see Indian parties of two and three returning from a deer hunt, with their horses loaded down with the carcasses and hides of deer captured on the trip. The lover of field sport can be accommodated by a trip to the mountains."

THIS MINNEAPOLIS DOG POISONER.—*Enquirer*, Minn., October 8.—*Editor Forest and Stream*.—In your issue of September 30 appears a letter from a "Windom Pot-Hunter," which criticizes severely a letter and its author which appeared in a previous issue of your valuable paper over the signature of "Wausee," dated at this place September 1. Now, as "Wausee" is known to many of your readers, and as "Pot-Hunter's" letter does him great injustice, I hope you will allow me space for a line or two from a disinterested standpoint. Evidently "Windom Pot-Hunter" is mistaken in his opinion, and visits the sins of some "non-resident pot-hunter" on an innocent man to whom they will not stick. From my acquaintance with "Wausee" I am certain that if ever at Windom (which I doubt) he conducted himself as a gentleman and true sportsman should, and that whatever he wrote in regard to the dog poisoning at Windom was written in good faith, and on what he believed to be reliable information. "Wausee" spent the most of the chicken season here, and won the good will and respect of those with whom he came in contact, by his sportsman-like conduct as well as his gentlemanly and social qualities. He is no market hunter, neither does he disregard the rights of farmers, by "trespassing on their growing crops," by the "hoglike" manner displayed in hunting birds for market, or by "shooting them and driving off without apologizing." And I am very certain that nine out of every ten of our people will say with me—Let all such sportsmen as "Wausee" has proved himself by his stay among us to be come and hunt their fill, but "pot-hunters" are not wanted. FAIRMONT SPORTSMAN.

"Windom Pot-Hunter" would undoubtedly have made a stronger case for his side had he refrained from attempting to connect "Wausee's" personal character with the merits of the question. Both these writers using assumed names are thereby unknown to the public, and the readers of this paper are not interested in their personal character. That which does interest us is to know whether or not we can with safety take our valuable dogs to the County of Windom, Minn. Judging only from the two communications on the subject already printed we should not hesitate to do so. Moreover, we are satisfied that "Windom Pot-Hunter" and "Wausee" would enjoy an afternoon fight together, and possibly their dogs might also work in harmony together.

THE LONG ISLAND ASSOCIATION.—The regular monthly meeting of the Long Island Sportsmen's Association was held at the rooms of the Hamilton Gun Club, on Friday, Oct. 8. After Crooke, Esq., the Secretary of the Association, read a paper describing the different kinds of game and also the laws in regard to the same. It was accepted with thanks.

The Association is determined that after the next State Sportsmen's convention no one will have cause to call them an association of pigeon shooters, and in regard to this Capt. Elmendorf made a motion to appoint a committee from the Long Island Association to confer with the different clubs throughout the State, and make a code of game laws that would be applicable to all the States, and would be able to make the Executive Committee and carried. Mr. Crooke suggested that action should be taken in regard to appointing a committee to solicit prizes. The motion then made by Mr. Ackers to appoint the President of each club a committee was carried. Motion was passed to assess the clubs for money to meet the expenses of the coming convention, and to also assess the individual stockholders for money to get stock certificates printed. A motion was carried to the effect that a committee be appointed to examine the articles belonging to the State Association which were presented by the President, Allen, and report as to what condition they are in. Mr. Henry Altbrand, President of the Washington Gun Club, received the thanks of the Association for a letter tendering to the club a song entitled the "American Sportsmen's Song." The letter was laid on the table to be read at the next meeting, and Mr. Altbrand and also the Glee Club of the Washington Gun Club were invited to be present. The President was authorized to appoint a place for the next meeting, after which the meeting adjourned.

The L. I. sportsmen are showing the right spirit in regard to game protection, and if the other organizations throughout the State will co-operate with them we may expect a code of laws that will effectually put a stop to the work of the pot-hunter as well as to that other class of game destroyers, namely, self-styled sportsmen, who lack every one of those qualities of the real sportsman which have ennobled the name and the class.

MAINE SPORTSMEN'S ASSOCIATION.—At the annual meeting of the Maine Sportsmen's Association held at Peak's Island last week, the following named officers were elected for the ensuing year: President, Hon. P. O. Vickery, Augusta; Vice-president, Geo. C. Lord, Kennebunk; 2d Vice-president, Hon. Wm. W. Thomas, Jr., Portland; Secretary, H. F. Farnham, Auburn; Treasurer, E. W. Cushman, Portland; Director for four years, J. B. Jones, Peaks Island. The following committees were appointed by the President: Committee of August: Committee on Charter—P. O. Vickery, Gen. W. S. Tilton, W. W. Thomas, Jr. The following committees are to report at the next annual meeting: 1st. On Laws for the Protection of Game Animals of Fur, Fin and Feather, and Insectivorous Birds—Everett Smith, Dr. E. F. Sleeper, C. P. Nason; 2d. On Fish Laws, including propagation and production—E. M. Stillwell, W. W. Thomas, Jr., W. H. Cloudman; 3d. On Enforcement of Game and Fish Laws—Daniel W. Martin, Wm. W. Castle, G. C. Lord; 4th. On Sporting Dogs—Everett Smith, W. W. Castle and C. W. Curtis; 5th. On Voluntary Essays and Papers—Secretary, president and vice-president: 6th. Publishing Committee—

P. O. Vickery, H. F. Farnham and E. W. Coburn. The Executive Committee appointed the following wardens: Andrew McGinnis, J. P. Pettigall, Auburn; Cumberland—Frank Merrill, Portland; Kennebec—Dr. G. W. Martin, Augusta; Oxford—W. S. Skillings, Bethel; Sagadahoc—O. H. Greenleaf, Bath; Penobscot—E. H. Mersey, Bangor; Knox—James Wight, Rockland, York—Z. M. Cushman, Kennebec. As soon as a charter is granted, these wardens will possess the same authority as State wardens.

**RETURN OF MIGRATORY QUAIL.—Rochester, N. Y., Oct. 4.**—It will be agreeable news to all interested in the migratory quail that the experiment tried in this vicinity by the Monroe County Club promises to be a complete success. My friend, G. D. B., on whose farm three pairs of the imported quail were placed, to-day informed me that there are two levies of the birds close by where he liberated the old ones this spring. He thinks there are forty in the berries, and when seen some days ago the young were strong of wing, and when flushed went off like the native Bob White. I have heard that some others of those set out by the Club hatched large broods that seem able to take care of themselves. In this county we are making an effort to protect the native quail and grouse, and prevent shooting for three years, but it is difficult to guard against the soulless pot-hunter, one of which class last week went in the town of Irondequoit, about four miles from this city, and shot about fifteen quail out of a bevy which some of the decent sportsmen were trying to save for "seed." If we can discover who the fellow was that did this mean act he will wish his powder had been wet. There has been very few woodcock shooting heretofore since the opening of the season, but I regret to say that most of the birds found their way to restaurants. There have been a few good bags of gray plover shot on the uplands and wheat fields, and duck shooting is opening with good prospects. It has been too dry for snipe, but odd ones have been picked up, and on Saturday I saw a good bunch in a market; they were shot at "the ponds" in Greece. In the last match at balls the Monroe County Club defeated the Rochester Gun Club, and the latter were vanquished last week by the Dansville Sportsmen's Association, who now contemplate challenging the M. C. C. In a fifty bird match last Thursday G. W. Crouch, Jr., beat Al. Evershed; score, Crouch, single, 26; double, 18; Evershed, single, 27, double, 11.

**SOME GUN TRIALS.—Wadley, Ga.—Editor Forest and Stream.** It was sneeringly asked once in the South, before the "war," who would shoot any but an English gun? All were English. Some were cheap and worthless, some were high priced and worthless; Purdy, Richards and Green were the only makers in whom any reliance could be placed. Now all that is changed. We have beaten the world with our breech-loading rifles, and now some American firms come to the front with breech-loading shotguns that are not to be excelled in beauty of finish, in rapidity of action, and in hard, close shooting. In the following trials I used 3½ dr. Latins & Rand's powder, very coarse in grain and very mild. I used 12 oz. No. 8 shot, with two No. 11 pink edged wads on powder, and very thin wad on shot. The gauge of all the guns was No. 12. To test the penetration, I used sheets of pasteboard, 3 in. in thickness, placed one inch apart. Target, 30 yards distance, 40 measured yards.

Fox, left, 284, right, 301; Remington, left, 231, right, 285; Colt, left, 226, right, 287; Stevens, left, 236, right, 251; Clabrough, left, 273, right, 298; Baker, left, 337, right, 361. Penetration uniformly ¾, with one exception, where Colt gave 1-16.

Selecting the Fox and Baker guns as giving the best results, I fired one round, both barrels, at 40 yards, No. 6 shot, same charge as above.

Baker, left, 237, right, 251; Fox, left, 102, right, 206. Penetration same as above.

All the above guns were factory made, with the sole exception of the Clabrough, whose owner claimed that he paid \$250 for it.

Comparing the results of the above trial, we find that American gunmakers have succeeded in making a breech-loader that will equal, very nearly, Greener's, one of the best in the market. Greener's guns were made in England, and that they will put more than from 280 to 300 No. 6 shot in a 20 inch circle, 40 yards; and in this trial we must allow the difference in the number of pellets to the oz. English shot and our shot, making our No. 7 about equal to the English No. 6. No one could be more surprised at the result of the above trial than myself. I had been taught to believe that English guns were far superior to American guns. About the wear and tear of the guns I say nothing, for I know nothing; but judging from the appearance of most of the American guns used in the above trial, I should say that they were honestly made.

There has been a great deal of balderdash of late years about the superiority of choke-bored guns for large shot. I cannot use buckshot in mine, for I think them injurious to the gun. With BB I can kill any game we have in Georgia, sending it through the largest turkey.

Our correspondent neglects to state whether the guns were bored alike—a very important consideration.

**CONNECTICUT.—New Haven, Oct. 4.**—The ducking season for line shooting opened at George Lanfer's on Sept. 25. The night previous a number of the gun club went down. The line formed at six A. M. the next morning, about one hour too late and too far from the shore. There were very few ducks killed. The line broke up at one and at two the shooters sat down to one of Lanfer's capital dinners. The next week there has been an unusual good fly of wild pigeons and yellow hammers, but for some unaccountable reason very few wild pigeons have been killed. The largest bag, which was made by Messrs Mallory and Son in two mornings, was 140 wild pigeons; J. R. Brady, 20; L. Barber, 25; J. Linsly, 16 in one morning. Mr. A. Barber one morning killed 55 yellow hammers. H. and J. Linsly during the week have bagged 94 yellow hammers, 25 pigeon and 16 gray squirrels. Letts has killed about 10 Lines claimed to have killed 13 wild pigeons and 15 hammers. The latter could not find as it was not on his pole. It is claimed that a member of the club has been unable to find his wardrobe since the last flight, and owing to his exposure that morning is not able to be out. The game law went off on Oct. 1, but owing to the warm weather and scarcity of woodcock there were but very few who would inform one of their success. The Potter Brothers show their bag the first day, which consisted of 20 quail, 10 woodcock and 2 partridge. David Cowell brought home five or six quail, and some home without a bird and several claim they didn't go out.

**A TEST CASE.—Oscego, N. Y., Oct. 2.**—Editor Forest and Stream: The Onondaga Hunting and Fishing Society of this city, an association of gentlemen leasing a large body of

marsh land upon the shore of Lake Ontario, near this place some time since instituted an action against certain parties for trespassing upon their grounds and hunting thereon, such action being brought under, and by virtue of Sec. 28 of Chapter 534 of the Laws of 1879 and its amendments. The case came on for trial yesterday, Oct. 1, before C. O. Case, Esq., Justice, of this city, and resulted in favor of the plaintiffs, a judgment being obtained by them for one violation of the law of \$25 and costs. This success, it is to be hoped, will deter other lawless hunters from incurring like risks, and will protect the rights purchased by the club. Why the owner of waste marsh land should not be entitled to obtain therefrom an income by way of rental, as well as from other portions of his farm by way of cultivation, is the only question involved, and we believe that a few energetic and determined enforcements of property rights, as necessity may arise, will shut this matter for good for all the sporting patrons and Fishing Society propose to deal with all men fairly, but they also propose, knowing and having paid for their rights, to maintain them.

**GAME PROSPECTS IN MINNESOTA.**—Sault Centre, Sept. 20.—Plenty of geese, ducks, sand-hill cranes, etc., have now made their appearance in large numbers. A good shot will have little trouble in bagging fifty to seventy-five in a day's sport. This country is free from glaring notices such as "No shooting allowed on this farm," "Don't shoot inside the fence," etc., etc., so a sportsman need not fear being driven off just as he gets ready for work. In company with a gentleman from Massachusetts, the other day, we had a splendid time in the cracking snipe, and the game breed and patronage of Minnesota is celebrated. The farmers will allow one to dig "pits," and, as a general thing, seem to enjoy the sport of seeing the sportsman bring down four or five old "honkers" as does the hunter himself. In one instance we had shot a fine goose in a muddy lake, and, as our dog would not retrieve, the generous old gentleman sent the "lad" to the house and brought out the "Newfoundland pup," which, it is correct to say, is a game dog, and a very firm, much to the chagrin of our dog, who no longer wished he had retrieved. We select the rooting places of the geese and shoot them by moonlight, first concealing ourselves before they return from supper. A rubber coat lends enchantment these evenings.

**THE HEAVIEST WOODCOCK.**—Franklin, N. Y., Oct. 2.—I was greatly interested on reading "Parvus" letter on "Breeding Quail in Confinement" in late issue of FOREST AND STREAM, and I sincerely hope that some wealthy sportsman, or body of sportsmen, will step to Mr. Benbrook with the requisite funds to make this experiment to be thoroughly tested; for it not only is a good work, but a great work, one that certainly will be greatly appreciated and patronized by Maine, New Hampshire, Vermont, Massachusetts and New York, and probably many sister States, and I believe there is not a sportsman in any of the above mentioned States but will cheerfully contribute each his mite in such a case as this, as, judging from "Parvus" letter, Mr. Benbrook is the right man in the right place.

I also notice E. T. B. inquires for heaviest weight of woodcock or quail in America, and as I have had quite an extensive acquaintance with woodcock and ruffed grouse, I will give in my testimony, as he requests. Some four years ago I shot a remarkably large female cock, which attracted my attention so forcibly that I had it weighed, and found it kicked the beam at just 11½ oz. Since then I have shot two or three which I thought might possibly be larger, but was not positive, as no facilities for weighing them were at hand. This I can say is the largest American woodcock I ever saw. Let us hear from others on this, and also the heaviest weight on ruffed grouse.

**Syracuse, N. Y., Oct. 9.**—I find recorded in my note book the weight of two woodcock—one killed October 10, 1874, by John H. Mann, the other killed November 10, 1877, by Jefferson Downs; the former weighing 10 ounces, the latter 10 3-16 ounces. Have no record of weight of quail.

**JOHN H. MANN.**

The ordinary weights of woodcock are from about 5 to 6½ ounces for males, and 7 to 8 ounces for females. In 1874, while quail shooting in Warren county, N. J., late in November, we moved two woodcock one day, the only long bills we found, and were "practically proper" in the hands. The heaviest weighed 9½ ounces and the other 9 ounces—18½ ounces for the two. These were the largest woodcock we ever saw. Quail do not seem to have been weighed, but we shall look for reports when the season opens.

**MR. LANE EXPLAINS.—Good Ground, L. I., Oct. 3.**—Editor Forest and Stream: Under the heading of "All Around Notes" in the last issue of your valuable journal, I noticed a communication signed "Bedford" and dated Lanesville, Ohio, Sept. 13, containing certain statements which, in my own justification, I feel myself obliged to call in question, relying on your often proved courtesy to grant me the necessary space in your paper. In the first place your correspondent omits to mention that he applied to me by letter for accommodations, and that I immediately telegraphed him that my house was full, in spite of which he and his friends who "wanted to shoot something" came on from Hoosierland. When they arrived I did the very best I could for them, securing for them the best guide in the neighborhood and also the best board and lodging; as for the shooting they may have had at places in the bay outside of those leased by me, as such are "practically proper" in the hands. I was reminded by number of birds shot in my blinds and marshes as compared with those shot elsewhere in Shinnecock Bay. Although rather irrelevant, permit me to offer you my most hearty approval of your exposure of that villainous compound zepeth "Dittmar powder." WILLIAM M. LANE.

**A WINTER SPORTING GROUND.—Indianola, Texas, Sept. 30.**—I am glad to give you any information I can in regard to game resources of this section, but a few lines from my friend "Bexar," of Corpus Christi, who wields an able pen and who has hunted over this as well as the section where he now lives, would, I think, be more satisfactory to you and your subscribers. In our immediate vicinity we have very fair sport both for fish and game. Go out from amongst the houses and sit down with your line in one hand and your gun in the other, and you are almost sure to have fish or fowl in a short time. In their season, say from August 1 to October 1, we have on the prairie thousands of "papabottes" and snipe, a good sprinkling of prairie chickens and quail (on and near the river bottoms and where there are any cover, such as bushes, etc., the quails are in thousands). In October the geese and ducks begin to arrive, and from that time until March we have some of the best sport in the State (sandhill, tugler and others). Wilson and snipe snipe. You need not go over 50 yards from your house to shoot snipe of

any kind, and a sportsman of moderate desires can have a fair day's shooting and not go a mile from home. The bays between here and Corpus Christi in the winter season are alive with fowls of all description, and on the islands there are a good sprinkling of deer, good camping places all easily accessible by boat, and plenty of fine fish and oysters in shallow water, almost at the door of your camp. Any of the boatmen can take parties to any of these places (and there are plenty of boats here), and a sportsman can have all the fun he desires. An experienced gunner with the appliances they use North, such as blinds, boats and decoys, could kill immense quantities of game. We use none of these here, do not take the trouble, as we can kill all we want without them. Having mild winters, parties wishing to spend the winter hunting or fishing could not pick out a better locality.

**LONG POINT.—London, Ont., October 5.**—Following is the score of ducks bagged by the party of sportsmen now at Long Point. The figures show that the Marquis of Lorne knows how to handle his gun as well as the rest of his party. Your columns not long ago contained an admirable sketch of the Long Point preserves, club-house, etc. The score is as follows:

	Oct. 1.	Oct. 2.	Total.
The Governor-General.....	40	75	115
Col. de Winton.....	33	31	64
Captain Harbord.....	34	31	65
Rev. Dr. Ryerson.....	41	41	82
Col. de Winton.....	41	127	168
J. T. Lord.....	20	69	89
Edward Harris.....	47	28	75

M. Allan.....	—	9	9
Total.....	—	—	1,012

**OUR DETROIT LETTER.—Detroit, October 11.**—The happy season of the sportsman is fairly upon us. Ducks are everywhere in two days last week Mr. L. B. Jewell, of Hartford, the Nimrodian brother of the satin-haired ex-Postmaster-General, backed by a well-known Detroit hunter, bagged at Point Mouille three hundred; most of them were mallard, but a fair proportion were the blue-winged teal, all fat, and such as I have had a tooth in, juicy and gamey to a degree. Andrew Jackson, the philosophical phallow of Saul's Ste Marie, recently left his native wilds and came down to the city to shoot civilized game. He must be disappointed as well as his divers misses, but what he lacked in skill with his gun he made up in his manipulations of the cuisine. As I predicted, the rush to the North Woods is at hand, and dealers in sportsmen's supplies are reaping a shining harvest. The pigeon shoot for the Michigan State medal, by the members of the Michigan State Medal Association, is booked for next Tuesday. There is to be a lively contest with the result of which I shall acquaint you in my next. Mr. Jewell of course I have already written is still surveying the big marsh for duck, having returned thither on Saturday.

**G. P. G.**

**WORCESTER, Mass., Oct. 9.**—The Sportsmen's Club had a splendid day for their annual shoot yesterday, and enjoyed themselves quite as much breaking glass balls at their grounds at the lake as they would have done had they scoured the woods for a circuit of 20 miles in pursuit of game. The sides were chosen and captained by A. P. Pond and Alta Haughton, and resulted in the defeat of the Haughton side, 10 to 9. The collation served on the grounds by Landford Tower of the Lincoln House. The score was as follows:

A. P. Pond 17, W. S. Perry 20, W. H. Cole 16, L. R. Hudson 16, J. B. Goodell 15, A. B. F. Kinney 16, C. R. B. Claffin 16, O. F. Taft 16, Steadman Clark 14, R. T. Shepard 12, C. H. Bowler 13, Chas. Hartwell 5; total 176.

A Haughton 10, C. B. Holden 16, G. J. Rugg 16, E. T. Smith 12, M. D. Gilman 15, L. G. White 17, A. L. Rice 16, E. S. Knowles 19, T. B. Boyd 15, A. B. Joslyn 12, A. F. Hays 8; total 164.

After the side shooting, swiftpakes were arranged and all hands engaged in the sport. A handsome silver mounted pistol, offered by Mr. A. B. F. Kinney, was won by Mr. A. P. Pond who broke 16 straight, defeating W. S. Perry, who broke 15, the match being shot on the "miss and out" method. There was a large attendance, and everybody had a good time.

**GAME CONSTABLES.**—We have long advocated the appointment of game constables, as the only efficient method of enforcing game legislation; and we are glad to see others coming around to the same view of the case. A game constabulary, as we have said before, is the only true solution of this important problem.

**COUNTING CROWS.—Hornellville, N. Y., Oct. 10.**—You wish to know how I know there was 20,000 crows in the flock? Of course I could not swear to it, but think you could safely put in another 0 and then not have too many. I counted 238 flying over a certain point in just two minutes, and they were flying like that while five of us were shooting a string of ten glass ball apiece. We were in a valley and could only see a small part of the flock, but a gentleman told me that he saw the flock shooting that he had been driving under the flock for two miles or more. So you see there was *enough* enough for a big flock.

**INFORMATION WANTED.—GEORGIA GAME.—Potsville, Oct. 11.**—I would like a little information in regard to the game I will find in Georgia in the country north of Atlanta, within a radius, say of fifteen or twenty miles. I expect to spend the winter about there, and would like to know something about the shooting so as to prepare myself beforehand. I use a twelve gauge gun, which I think will be able to get all the game I should so far inland. I suppose I will be able to get a dog down there, will I not?

**DEER AT TIMS POND.**—Mr. J. Warren Tuck writes: "One day Sunday, during my recent visit to Tims Pond, as I sat on the bank, I saw two deer come down into the jacket and drink of the clear cool waters, then frisk back into their 'forest home.'" He adds that the whole country there is full of deer, and those who are prepared to enjoy the sport with due moderation will find Tims Pond an excellent rendezvous. We are glad to know that the proprietors of the camps there are determined to see fair play for their visitors, for the trout and for the game. To protect the country and prevent the repetition story of the Rangelys, Adirondocks and other like resorts some shrewd protective management is absolutely

**ILLINOIS.—Chicago, Sept. 25.**—Game is more plentiful than it has been for some time past. The ducks are on the move South. A few days since Mr. Henry Kleinman, at Calumet Lake, shot one hundred and five ducks, and on Saturday, the

A STORY WITH A MORAL.—*Stamford, Ky., Oct. 6.*—Last week the Rev. Petrey, of this county, who was holding a protracted meeting at Rock Castle, went to the house of one of the brethren to spend the night. He had hardly got seated before a hen flew into the house, and attempted to alight on a rifle that hung on the wall. The weapon tipped over, and falling on the lock, was discharged, the ball taking effect in the thigh of the preacher, causing lockjaw, from which he died last night.

Next morning another sweep at five birds each was shot, 21 men

Wares—Fisherdyck. 16 : Carroll. 15 : Harwood. 14 : Winter. 13

tan, 1 year and 4 months; cross between German foxhound and dachshund. Gottlieb Meyer; Flora—White and tan, 1 year and 10 months; German mountain harrier. Julius I. Bradley; Nellie—

labeled goose killed over her. She was a litter sister to Suffolk Boy first prize at Rochester.

KENNEL NOTES.

**BRUN, —Gypsy-Elcho III.**—Mr. G. W. Basford, of White Plains, N. Y., has sent his red Irish setter bitch Gypsy to Portsmouth, N. H., to be bred to Elcho III. **Dolly-Wildair.**—Hornell Cocker Kennel Club's Dolly to Wildair, Sept. 16. **Mignon-Wildair.**—Mr. Eugene Power's black and white diked cocker bitch Mignon to Wildair, Sept. 27. **Fleur-Robin Adair.**—Mr. C. S. White's pure liver cocker bitch Fleur to Hornell Cocker Kennel Club's Robin Adair, Oct. 1. **Sunshine-Robin Adair.**—Mr. H. A. Todd's liver and white cocker bitch Sunshine to Robin Adair, Oct. 4. **May-Sensation.**—Westminster Kennel Club's May to Champion Sensation. **Pallas-Rob.**—Westminster Kennel Club's Pallas to Dr. Lyman's Bob.

**NAMES CLAIMED.**—**Brum.**—Mr. Satterthwaite claims the name of Brum for his setter dog puppy, out of Delta by Irish. **Meg.**—Mr. F. Satterthwaite claims the name of Meg for his Irish setter bitch puppy out of Maud by Dan, from the Kennel Club. **Horace.**—Mr. F. Satterthwaite claims the name of Horace for his setter dog puppy, out of Nilsen by Druid.

The Rifle.

RANGE AND GALLERY.

**Boston, Mass.—Thursday, Friday and Saturday, Oct. 14, 15 and 16,** will be gala days at Walnut Hill. The prizes are valuable and will attract a large field of riflemen from abroad. The event of the week will take place on Friday, when the experts will meet for the long-range contest at 800, 900 and 1,000 yards, viz., eight men of the celebrated Amateur Club, of New York, including Messrs. Dr. Clark, Rathbun, Weber, Lamb, Fisher, Jewell, Allen and Cobb, will probably the strongest team that ever visited Massachusetts. They will meet eight men of the Massachusetts Rifle Association worthy of their steel in Capt. Jackson, J. F. Brown, William Gerriah, J. S. Sumner, H. T. Rockwell, J. H. Gray, J. P. Rathbun, Chas. Hinman, Lewis Sanders and N. Washburn. The last two gentlemen are new recruits. The range will be open to the public and all visitors will be cordially welcomed. The short-range teams who have signed their intention to be present will also be an attractive feature of the several days' sport. The following is the programme of the three days' contest:

**Team Match.**—Open to all teams of six from any organized rifle association in the United States: Distances, 800, 900 and 1,000 yards; rounds, fifteen at each distance.

**Short-range Team Match.**—Open to teams of five from any organized rifle association in the United States: Distance, 200 yards; rounds, ten. Entry fee for each team, \$5; prizes, seventy-five per cent. and twenty-five per cent. of the entry fee.

**Nine-hundred-yard Carton Match.**—Open to all comers; distance, 900 yards; cartons to count six; rounds, 7. Entry fee, \$1; re-entries permitted. Prizes, a Lord Ray telescope, presented by J. H. Steward, London optician to the M. R. A.; Winchester repeating rifle, model 1873; revolver, 38 caliber, full plated and engraved, presented by H. Tyler, Esq.; opera glass, first quality, Lemair, and cash prizes amounting to \$44.

**Two-hundred yard (Creedmoor) Match.**—Open to all comers; distance, 200 yards; rounds, 7; military rifles allowed one point; ties between military and sporting rifles decided by inverse order of shots. Entry fee, \$1; re-entries permitted. Prizes, Winchester repeating rifle, model 1873; telescope, first quality, twenty-two ligues; opera glass; tilting water pitcher, triple plate and chased; fruit dish, and cash prizes amounting to \$98.

**Two-hundred-yard (Massachusetts target) Match.**—Open to all comers; distance, 200 yards; rounds, 7; military rifles allowed one point; ties between military and sporting rifles decided by inverse order of shots. Entry fee, \$1; re-entries permitted. Prizes, Winchester repeating rifle, model 1873; telescope, first quality, twenty-two ligues; field glass, twenty-two ligues; iron pitcher, triple plate and engraved; one dozen A1 table forks; and cash prizes aggregating \$23.

All competitions are subject to the rules of the Massachusetts Rifle Association. No challenge of shots will be permitted, except at the discretion of the officers. No sighting shots allowed. The individual matches (3, 4 and 5) will be opened on the first day and continue open till the close of the meeting, except when the targets may be required for the team matches. The range will be opened each day at 9 o'clock, and scoring in individual matches will begin and close at the discretion of the executive officer.

**Boston, Oct. 6.**—The Medford Rifle Association's fall meeting opened on the Bellevue Range to-day with 163 entries. In three scores of seven shots each Mr. E. F. Richardson and Mr. Charles each scored 102 out of a possible 105 points "Creedmoor count." The scores are as follows:

E. F. Richardson.....	5 5 5 5 5 5	4 5 5 5 5 5	4 5 5 5 5 5	102
W. Charles.....	5 5 5 5 5 5	4 5 5 5 5 5	4 5 5 5 5 5	102
G. F. Ellsworth.....	4 5 5 5 5 5	4 5 5 5 5 5	4 5 5 5 5 5	99
H. B. Smith.....	4 5 5 5 5 5	4 5 5 5 5 5	4 5 5 5 5 5	99
F. Lester.....	4 5 5 5 5 5	4 5 5 5 5 5	4 5 5 5 5 5	96
A. W. Webb.....	4 5 5 5 5 5	4 5 5 5 5 5	4 5 5 5 5 5	96
C. H. Russell.....	4 5 5 5 5 5	4 5 5 5 5 5	4 5 5 5 5 5	95
A. J. Green.....	32	32	30	94
Dr. E. S. Knight.....	31	31	31	93

J. Biscroff.....	194	

**Boston, Mass., Oct. 9.**—The regular short-range match took place on the Walnut Hill Range, this afternoon, with the following scores. Creedmoor Match, 200 yards:

C. B. Southwell.....	4 5 5 5 5 5 5 5 5 5	4-46
J. B. Feltow.....	4 5 5 5 5 5 5 5 5 5	4-46
J. Nichols.....	4 5 5 5 5 5 5 5 5 5	4-44
J. Jordan.....	4 5 5 5 5 5 5 5 5 5	4-43
C. E. Anderson.....	4 5 5 5 5 5 5 5 5 5	4-41
A. B. Borel.....	4 5 5 5 5 5 5 5 5 5	4-37

**Massachusetts Match, 200 yards:**

C. B. Southwell.....	10	12	11	10	11	19	9	11	107
J. B. Feltow.....	9	10	11	10	11	11	10	104	
J. B. Feltow.....	9	10	11	10	11	11	11	92	

**CAMPBELL, N. J., Oct. 7.**—Third off-hand individual match; open to everybody; rifle, any; 100, 200 and 300 yards; five shots at each. Re-entries allowed, but only the highest score to count. Competitors shooting with military rifles as such, will receive an allowance of one point at each distance (total 3 points). Not less than ten entries to constitute a match. Prize—To the competitor making the highest aggregate score of two competitions participated in out of the three, a short-range rifle:

First Competition.		100 yds.		200 yds.		300 yds.		Total	
Major E. O. Shakespeare, M. D.....	23	24	21	68					
Geo. Fox.....	23	22	21	66					
Capt. W. De V. Foulke.....	23	21	21	65					

Second Competition.		100 yds.		200 yds.		300 yds.		Total	
Major E. O. Shakespeare, M. D.....	24	23	20	67					
Geo. Fox.....	24	21	21	66					
Capt. W. De V. Foulke.....	24	23	22	69					

Third Competition.		100 yds.		200 yds.		300 yds.		Total	
Major E. O. Shakespeare, M. D.....	24	25	24	73					
Geo. Fox.....	24	22	21	67					
Capt. W. De V. Foulke.....	24	22	22	68					

**Total Aggregate of Two Best Scores.**

Major E. O. Shakespeare, M. D.....	141	Winner.
Geo. Fox.....	137	
Capt. W. De V. Foulke.....	136	

Dr. M. Price, J. Price, Major J. H. Burroughs and Dr. George Dixon all completed in this match, but retired before the close.

The second day of the meeting opened with a large attendance, Messrs. Charles and Richardson still continuing to make large scores, and winning the two first prizes. The prize winners and prizes, together with the three best scores counting as one continuous score, are as follows in their order named:

W. Charles.....	5 5 5 5 5 5	4 5 5 5 5 5	5 5 5 5 5 5	104
E. F. Richardson.....	5 5 5 5 5 5	4 5 5 5 5 5	4 5 5 5 5 5	103

**NEW ORLEANS vs. DENVER.**—The much spoken of and anxiously expected match by telegraph, between a picked team of riflemen of New Orleans and a team of the Denver (Colorado) Rifle Club, was shot Oct. 3.

The weather was against the representatives of New Orleans, for all the time they were shooting the sky was heavy with clouds, the wind shifting, though not very high, and there were frequent showers of rain. The men did their best, however, and the score, under the circumstances, is a good one.

The New Orleans team was to shoot between noon and sundown, and at 12:55 the first man (Guernin) was called to position at 200 yds. Previous to this, however, Gen. John Glynn and Col. W. T. Vaudry, representing the Denver team, had inspected the targets, measured the distance and attended to all the preliminary details.

Capt. Dudley Selph, captain of the New Orleans team, suggested to the representatives of the Denver riflemen that time could be gained by allowing two men to take position and shoot alternately. Gen. Glynn and Col. Vaudry accepted the suggestion, and Miller, the second man on the New Orleans team, was called to position.

Guernin aimed and fired, and the red disk was shown at the target, and, as some one remarked, "That is good for a start." Miller fired and made 3. The figure was a dampener as a beginning for him, as he was expected to do better, but he was generous and contented with nerve, and confidence in him was not lost. After firing five shots, Guernin and Miller gave way to Spurl and Watson, and thus it went on down until all the men on the team had made one-third of their score, and the roll was then again gone down.

As time, as the shooting progressed, was passing so rapidly that an average of four would be made, but a couple of threes in succession by Watson and Gerries soon lessened the feeling of certainty; and when on the last round Franklin's gun gave out, and he was compelled to take another, all hopes of four all around were lost.

Franklin had been making four and five straight along, and when on his eleventh shot he made but two, every one knew that something was wrong. He tried the gun once again, and the score showed up three, and then he gave it up, and submitted his gun to the inspection of Capt. Selph and the Denver representatives. It was found that the lock was out of order, and that the trigger from a six-pound pull had fallen to a hair pull, and could not be fired.

Under the rules he was authorized to use another gun, and compelled to commence the round over. He had been using a Remington rifle, and he replaced it with a Springfield, but as Springfield cartridges were not at hand, he attempted to use the Remington shells. The result of the first shot was a goose egg, the next was but 3, the next a goose egg, and then the cartridges were changed, and in his next two shots Franklin made 8.

By the accident certainly 8, and possibly 12 points were lost to the New Orleans team.

The official score of the shoot stood as follows:		50 yds.		100 yds.		150 yds.		200 yds.		250 yds.		300 yds.		Total.	
Guernin.....	4	4	3	3	4	4	4	3	4	4	3	4	4	36	
Miller.....	3	4	4	3	4	5	4	4	5	3	3	4	5	35	
Spurl.....	4	4	4	4	4	4	4	4	4	4	4	4	4	36

Gerries.....	4	4	4	3	3	4	4	4	4	4	4	4	4	35	
Franklin.....	4	4	4	4	4	4	4	4	4	4	4	4	4	36	
Knight.....	4	4	4	4	4	4	4	4	4	4	4	4	4	36	
Selph.....	4	4	4	4	4	4	4	4	4	4	4	4	4	36	
Webb.....	4	4	4	4	4	4	4	4	4	4	4	4	4	36	
Total.....															580

A dispatch was sent from the Denver team saying: "We have shot, and made a total of 589." This would tie the score, and until full particulars were received it was impossible to tell which of the teams had won the match.

From Denver then came the full score in the following dispatch: Denver, Col., Oct. 4.—The members of the Denver Rifle Club

shot at their range in West Denver, the terms being 15 shots each, 200 yards off-hand. The rifles used for the match were Sharps' 1878 model, military rifles, adapted to government ammunition, open sight and trigger, pull 30 pounds and over. The following is the score made by the club:

P. C. Moore.....	4 4 4 4 5 4 4 4 4 4 5 5 4 4	4-63
R. M. Seidner.....	4 4 4 4 4 5 4 4 4 4 4 4 4 4	4-63
R. M. Seidner.....	4 4 4 4 4 5 4 4 4 4 4 4 4 4	4-63
A. Peterson.....	3 3 4 2 4 5 4 4 4 4 4 4 4 4	4-61
Wm. Anderson.....	4 4 4 4 4 5 4 4 4 4 4 4 4 4	4-61
W. M. Anderson.....	4 4 4 4 4 5 4 4 4 4 4 4 4 4	4-61
W. M. Lower.....	4 4 4 4 4 5 4 4 4 4 4 4 4 4	4-61
Jos. W. Lower.....	4 4 4 4 4 5 4 4 4 4 4 4 4 4	4-61
G. F. Anderson.....	4 4 4 4 4 5 4 4 4 4 4 4 4 4	4-61
F. P. Lower.....	3 3 3 3 4 4 4 4 4 4 4 4 4 4	4-59

**By a comparison of this score with that of the New Orleans team, it will be seen that the home team win under the rules. Each team scored two goose eggs, and honors are even on that score; but the Denver team scores three twos, while New Orleans have but two to their credit, and, therefore, are the victors.**

The Denver men, taking it to be a perfect tie, telephoned: "DENVER, Col., Oct. 4.—The rifle match being a tie, and individual scores being unknown, Denver will shoot over again on the tenth instant if agreeable."

**MAMMOTH RIFLE GALLERY.**—Boston, October 8.—The regular monthly rifle match for October has opened with some very fine shooting for so early in the month, and promises some very large scores before the month is over. The gallery has been well filled during the week with riflemen and their friends, and many of the contestants have not finished their five scores as yet. The following are the leading competitors, with their scores to date, ranking in the order named, in the Inaugural Rifle Match, 50 yards, rounds 8, possible 40: five scores to win, or possible 200:

CHICAGO AHEAD.—Chicago, Oct. 8.—We have some noted archers in this city, gentlemen who are making fine scores, yet disdaining to see themselves thus credited through the columns of papers. The following score, made a few days since in the presence of several interested spectators, speaks for itself and reflects great credit on the archer who accomplished it. Single York Round:—

Yards.	Hits.	Score.
100	52	204
80	46	262
60	24	146
Total.....	122	612

When we hear of this being beaten we will try again for Chicago

## Cricket.

## ENGLISHMEN vs. AMERICANS.

THE initial match played under the auspices of the Cricketer's Association of the United States, between American and English resident players of America, selected from the members of those clubs belonging to the Association, was played at Nicetown, Pa., on Oct. 6 and 7, and resulted in a draw. Heretofore this interesting match has been played at intervals during the last twenty-three years, the teams being selected by cliques of those most interested in the game at the time, and in consequence they have not been thoroughly representative. On this occasion, however, both teams may be considered as having fairly put forth the strength of each nation. The English twelve contained six amateurs and six professionals; the former were W. S. Patterson, of the Cambridge University eleven of 1878; Kessler, who fielded so well in the Canada-United States match; two of the brothers Hargrave, "Old Nelly" Pearson, the ex-professional of the Philadelphia Club, and Moeran, the all-round expert and "Iron's that" of the St. George Club. Unfortunately, Gross could not leave his business, so Giles, Sr., took his place, being one of the six pros. The other five were good ones, and England came to the front with the strongest team ever presented in a match of this character. We cannot say much for the American side; it was first-class, but the two Thyers, on whom we hang our faith, could not get away from college, and their places were filled by Messrs. Caldwell and Morris, also fine players. While waiting for the ball to ring to clear the grounds, we had a friendly post-mortem converse with Mr. G. M. Newhall, the Captain of the Americans, about the match we saw him play in twenty-two years ago, when he was but a lad of ———. He was then one of the American eighteen who played against eleven Englishmen of New York and Philadelphia, on the Camden grounds, and the only one on either side who had played internationally over two decades ago—"such is life." In olden times all contests of this kind were regarded with deep interest. The Englishmen then had the call and numerical odds, such as sides of eighteen and fifteen were pitted against them; but of late years Young America has picked up so grandly that the match has resolved itself into one that is contested on even terms.

The morning was charming in the extreme, and the soft, mellow light of the autumn sun made it the perfection of a cricketing day. The wicket, usually so good, was soft and spongy, and the ball cut up and bumped badly as the day wore on. Eleven o'clock was the hour announced for the start, but a half hour was wasted by the Britishers in selecting a captain, then the word was passed around the ring that Pearson was the chief and had been lucky in the toss. Every one expected to see the Americans take the field, but they were sent to the bat, and when their opponents turned up they did so with a baker's dozen. A roar of laughter announced this mistake, and Gregg of the Girards, the old man, was consoled with the office of umpire, a position he proved himself utterly unfit to fill. The factory whistles and farm horns were sounding for twelve o'clock when G. Newhall and Morris went to the wickets opposed by the bowling of Lane (left medium round) club-house end, and Bromhead (slow round) lower end. The field, in the opening over, was placed as follows: Joe Hargrave, at the wicket; Kessler, point; Patterson, cover point; Giles, short leg; Smith, long off; Moeran, mid-on; Tyus, straight drive; Brooks, long off; T. Hargrave, slip; Bromhead, third man, and Pearson, long slip. On Lane's fourth delivery, G. Newhall was missed by Kessler at point, and in the next over from the same bowler was given out leg before. This bad start was followed by still worse luck, and it was not until R. Newhall and Law got together that the score increased. The former, after making several boundary hits to leg and the on, departed with a dozen. Law then settled down to what resulted in the largest individual score of the match. During his stay he saw eight of his companions out, and his 54, which was made up of eleven 3's, two 2's and singles, was an exhibition of good all-round cricket, combining grand defence and fine hard hitting, including one slice of luck when he had made 11. Clark, the next highest scorer, played well for his fifteen, and with the last man out the tens showed two less than a hundred. The fielding during the innings was by no means first-class, but of the five that handled the ball, Lane's magnificent bowling more than counterbalanced the poor support, as the analysis will show. Total 98.

Bromhead and Brooks, at a quarter to four p. m., took their places at the wickets, faced by the bowling of Clark (fast round), lower, and Brewster (slow round), upper end. The field at the opening was placed as follows: Van Rensselaer at the wicket, Brewster, point; Caldwell, cover point; G. Newhall, slip; R. Hargrave, long slip; Law, mid off; D. Newhall, deep long off; Morris, mid on

G. Newhall, draw; Moore, short leg, and R. Newhall, long leg. Bromhead began at once a very free innings, and had quickly secured 9, when he skied one from the slow bowler to deep square leg, which, though badly judged, was finely held by Dan Newhall. Smith followed, and with the score at 15, C. Newhall (fast round) supplanted Clark. The new comer at once showed splendid form, and commenced to score rapidly. Brooks, however, in hitting the slow bowler to leg was beautifully caught low down by Moore at draw—Tyers came next, and both batsmen troubled the scorers until 31 was up, when D. Newhall relieved Brewster. Runs continued to come, although Moore dropped an easy one from Smith, off C. Newhall, when the batsmen had contributed 15. When the score had increased ten runs Law was handed the ball by C. Newhall, and Brewster resumed at D. Newhall's end. When time was called at five p. m. the total stood at 45, of which Smith had assisted with 16 and Tyers with 18. Both innings, however, continued a slice or two of luck.

The fielding of the American team was by no means up to the mark, and the bowling, with the exception of Law's, bad.

## SECOND DAY'S PLAY.

On resuming on Thursday at twenty minutes to 11 a. m., Smith and Tyers, the two not outs of the previous evening, resumed their places at the wickets. The former had already secured 16 and the latter 18. Law opened the bowling from the upper end and sent down a maiden to Tyers, and Brewster followed. Tyers was bowled by Law, his score marked with two 3's, two 2's and singles. W. S. Patterson, of the Cambridge University team of 1878, joined Smith. Law's sixth over was a gem, but Smith defended his wicket finely. Patterson drove the slow bowler for 1, Smith lifted him to the boundary at long off for 3, and each batsman added a single. With the score at 57, D. Newhall relieved Brewster, and in his second over tempted Smith to let out at a Yorker, which went straight to Law's hands at mid-off. His score of 27 was obtained in the best professional style, and contained four 3's and singles. The veteran Joe Hargrave partnered the Cantab, and the latter got Law beautifully to forward square leg for a triplet. The fielding thus far had been a great improvement on that of the first day, and Law particularly was bowling in grand form; nor was the batting at all behind, Patterson handling the willow in such a manner as to call forth much deserved applause, his late cutting being clean and well placed. At 69 Clark supplanted Law, and Patterson cut him prettily through the slips to the boundary. In his next over J. Hargrave hit across at a straight one, and his middle stump turned a somersault. Tom Hargrave followed, and the score slowly advanced. When Patterson had secured 16 Van Rensselaer missed him at the wicket off Clark, but avenged himself after the batsman had added 1 more to his score, by stumping him finely off the slow bowler. Patterson's stay at the wicket had been productive of 17 runs, obtained by very pretty cricket. Kessler joined T. Hargrave, and the latter was at once sharply caught behind the wicket by Van Rensselaer, off Clark. J. Pearson partnered the Staten Island favorite, who "brought down the house" by hitting the slow bowler over the ropes at square leg for 4. Brewster then took D. Newhall's end, and C. Newhall went on in place of Clark. The former only sent down one over, when D. Newhall resumed with the ball. Both batsmen got the slow bowler to leg for 8 each, and 90 was on the board. C. Newhall changed ends, and Pearson poked the ball into Caldwell's hands at forward square leg. Moeran filled the vacancy, and drove the last ball of the over for a single, thus bringing the score up to a tie with the Americans' innings. Kessler added two singles, and three figures were posted. Clark then took the upper end, and Moeran in attempting to drive him got under the ball and skied it over the bowler's head, where it was grandly taken by Moore, who had to run thirty yards to get it. Giles came next, and Kessler got both bowlers finely to leg for 3 and a 2. At 109 Law relieved Clark; but runs continued to come, Kessler hitting freely to all parts of the field and Giles showing fine defence. At last, however, the former was too late for a ripper from Law, and retired with the good score of 26, which contained one 4, four 3's, two 2's and singles, all obtained by fine cricket. Lane, the last man, joined the New York professional, and a cheer announced his run out the next ball, leaving Giles not out 4, the general play being a grand all-round display. Total, 120.

Play was resumed at fifteen minutes to two p. m., George and Charles Newhall at the bat, opposed by the bowling of Lane upper and Bromhead lower end. The former opened the score book by driving Lane finely to the off for three. Bromhead followed with a maiden, and C. Newhall got Lane to the off for a single. Bromhead sent down another maiden, and G. Newhall's middle stump fell to Lane's third delivery in the next over. Moore followed and just escaped his predecessor's fate. The next ball from Bromhead took C. Newhall's wicket, and a groan went up from the grand stand that was echoed around the ground. Law filled the vacancy only to be bowled the first ball. Brewster followed suit. This was a slaughter of the innocents, and the English stock went booming. R. Newhall went to the wicket in deathlike silence, but aroused a cheer that might have been heard in Germantown by hitting Bromhead to leg for 4. Moore then cut Lane to the ropes for 3, and R. Newhall whacked him to leg for a couple. The stand of the innings now took place; runs came fast and furious, and the tens showed 20 up. Six minutes later they were changed for 30, when Smith took Bromhead's end. Bromhead then gave R. Newhall a life by missing him badly at deep on-field off the new bowler. In Lane's next over R. Newhall hit him to long leg for 3, and placed the other bowler to same place for a single. Although the score kept increasing, the fielding was in all respects first class, Giles being very nippy, and Tyers at cover point especially distinguishing himself. It was not until the score had reached 44 that R. Newhall fell a victim to a rattling catch by Patterson at deep square leg, off Smith, after playing a rattling innings of 24, made up of one 4, one 3, four 2's and singles. Clark joined Moore, and as Lane's eleventh over yielded six runs, 50 was up. In Smith's next, however, Moore was disposed of in the same manner as R. Newhall, after hitting hard for his score of 19, which contained three 3's, one 2 and singles. R. Hargrave followed, and Smith got Clark's middle stump. Caldwell, the new comer, and his partner each added a single, when the former hit the ball into Moeran's hands at mid-on. D. Newhall joined R. Hargrave, and after getting two singles T. Hargrave relieved Lane. D. Newhall drove Smith for a couple, and R. Hargrave snicked a slow one from T. Hargrave to Bromhead at slip. Morris, the eleventh man, went to the vacant wicket, and D. Newhall hit T. Hargrave to the ropes at long on for 3, and Smith to long leg for same figure. Both batsmen began

bating freely and well, punishing Smith badly to leg, and a dozen runs were added to the score before Smith got in on Morris' wicket. Van Rensselaer came last, and Lane went on at the lower end, vice Smith. The new comer hit Lane to the off for 3, D. Newhall to the same place for a couple, and then placed him to draw for a single. At 84 Bromhead took the ball from T. Hargrave, and with two more added to the score Van Rensselaer succumbed to Lane, leaving D. Newhall to carry his bat for an excellent innings of 20, in which there were three 3's, two 2's and singles. Total, 86.

This left the Englishmen but 65 to make to win, but as there was only fifteen minutes before calling time at five o'clock, it was agreed to prolong the game a quarter of an hour longer. Bromhead and Lane went first to the bat, against the bowling of Law and C. Newhall, without scoring. Lane hit the ball to Brewster at mid-on. Moeran came next, and after Bromhead had contributed for the former fell to a shooter from C. Newhall. Brooks followed and Law bowled Bromhead with a ripper. Smith joined Brooks and played Law's first ball on the wicket. Pearson filled the vacancy as the sun sank behind the woods, making the light very gray and difficult to play in. Brooks then got C. Newhall to long leg for 3, and Pearson drove him to the ropes for a like amount. The cheers from the English clique were deafening, but changed into a howl of dismay as Law upset Pearson's stumps the next over. The excitement became intense as Tyers partnered Brooks. Five runs more were added to the score, when time was called and the match ended in a draw. In every respect the finish was an exact counterpart of the Canadian match, and the rapid dropping of the Englishmen's wickets can be attributed solely to the fact that it is impossible to play cricket in the dark. Subjoined is the full score:

—Balmly sleep, good digestion, rich blood, elastic step and cheerfulness in Hop Bitters.

—A blind man has just astonished the world by climbing Mount Blanc. He ought to come to America and go wing-shooting on the prairies.

—Balm sleep, good digestion, rich blood, elastic step and cheerfulness in Hop Bitters.

## Answers to Correspondents.

## No Notice taken of Anonymous Communications.

E. J. A., Pittsburg, Pa.—See our advertising columns for wild rice for sale.  
 B. D. N., Washington, Pa.—Your inquiry was answered in our game columns, Sept. 30.  
 S. S., New York.—When is the law off quail this year in Connecticut? Ans.—Oct. 1.

H. W. K., Deposit, N. Y.—The Bogardus cartridges are said to be safe; we have tried them with success.  
 M. F.—We have no records of Monarch of the Seas. Apply at office of American Ladies, 26 Burling Slip.  
 M. M. M., Ripley.—Have no records of brig Adelaide. Write to American Ladies, 26 Burling Slip, N. Y.

J. W. P., Philadelphia.—The number containing report of archery meeting at Chicago was that of Aug. 8, 1878.

N. N., New York.—You will find nothing but barnyard fowl about Loebst Valley. See another reply for duck season.

P. N. B., Columbus, O.—Have written to learn about the pistol. For other inquiry see another answer in this issue.

A. H., Cuero, Texas.—It is safe to shoot the 5 drs. of the black powder in the gun mentioned, provided the gun is all right.

C. A. P.—It will not damage the canoe to let her remain in salt water for a long period, but better land her out. No great job.

J. G. K., Indianapolis, Ind.—For a 12-lb. gun in prairie chicken shooting, use No. 8, 3 drs. to 3½ drs., according to weight of gun.

C. F. N., Woods Corners.—You can clean brass shells by immersing them in some weak acid—vinegar will answer—and then rubbing off.

B., Buffalo.—No new edition yet of "Kemp's Yacht Designing," but only of his yacht and boat sailing, which deals of building small boats.

H. G. C., New York.—The ordinary vaseline, if pure, will answer for your gun. It will not injure it, and will prevent rust. Apply with a cloth.

D. A. C.—For 16ft. yawl boat use lug sail. Hoist, 10ft.; foot, 11ft.; head, 7ft., of which 2ft. is forward of mast; peak to yard, about 40 degrees.

F. D., Cohocton.—The expansion of your brass shells is probably due to a fault of the chamber. Take the gun to a gunsmith, and have him examine it.

G. B. C., Worcester, Mass.—1. Write to the Secretary of your state. 2. The regular brands of black powder are all reliable. 3. The kind you mention is fair.

C. S. G.—Zinc, sheet-lead or tin; or else lay a coat of asphalt staling, and plank over with light stuff. Or simply double-deck with coat of tar between and caulk.

E., Yalaha.—For boat 19ft.x9½x2½ use cat rig or lug sail. Hoist 21ft., foot 21ft., head 12ft, peak to gaff 40 degrees, if a lug. The mast should be 22ft. with 5ft. forward of mast.

W. B. R., Welland, Ont.—You can use with safety the ordinary engine shell, and also the long shell, in a rifle chambered for the extra long, but probably with not such good results.

H. S.—For photos of American yachts send to Black & Co., 333 Washington st., Boston. We have some assorted English photos of all kinds on hand. Can be forwarded for 50c. a piece.

X. Y. Z., Lockport, N. Y.—We cannot tell you where to go within thirty miles of your own town for good quail, partridge and woodcock shooting. Perhaps some of our friends can furnish the information.

A. L. E., New York.—1. The 16-lb. is pretty small; we should prefer a 12. 2. See our game reports from Long Island. 3. Long Island is governed by the State game law, with the exception of some county laws.

D. W. H., Philadelphia, Pa.—There is no book containing just the information you want. We shall soon publish a series of articles on the subject, with special reference to the wants of just such persons as you speak of.

G. H. W.—Small sloops can be sailed from Oceanic to Havre de Grace by outside passage around Cape May, thence to Delaware city and through Sassafras canal to Chesapeake and up the Susquehanna. No inland passage.

C. M. C., Pittsburg, Pa.—Please inform me through your valuable paper whether woodpeckers do or do not support themselves on trees by means of their tail to some extent? Ans. Yes, the tail is employed as a partial support.

S. S., Danbury, Conn.—1. For the general shooting mentioned, should advise a 12-bore. The choice between a 12 and a 10 is really a matter of taste; the shooting is practically the same. 2. 14s; a \$125 gun should stand 4 drs. powder.

H. O. Jr., New York.—1. To waterproof your shooting-coat, use following mixture: To 6 oz. hard yellow soap add 1½ pint water, and when boiling add ½ lb. patent driers and 5 lbs. boiled linseed oil. 2. The cardboard was equally good.

F. R. D., New York.—There is no law that we are aware of in Westchester County prohibiting the shooting of robins after Oct. 1. The supervisors of that county can inform you. We have applied to them on the point without response.

G. F. S.—Place your steam yacht on file at Manning's Agency. We do not deal in any property. The road steamer and boat combined would be difficult to place on the market. Doubt if there would be much demand for such a combination.

J. F. J., Amesbury.—Protest cannot be entertained, as your rules specify that all protests must be made within half an hour after the race. If the judges have the jurisdiction we should anyway counsel waving the protest, as not flying the club colors in no way interfered with the sailing.

H. A., City.—The New Jersey open seasons begins as follows: Quail and pheasants, Nov. 1; woodcock, Sept. 1; rail, Sept. 1; upland plover, Aug. 1; summer duck, Sept. 1; reed birds, Aug. 15; deer, Oct. 15; squirrels, 1; rabbits, Nov. 1; black bass and pickerel are the only fishes to be caught now.

F. R. T., Plattsburg.—1. Do not know where to refer you for the rates. 2. For pigeon shooting with a 10-bore, 10lbs full choke, and 5 drs. powder, use 1½ oz. No. 7 or No. 8 shot; or No. 7 in one barrel and No. 8 in the other. 3. Wild fowl season in New York is from Sept. 1 to May 1; Long Island waters, Oct. 1 to May 1.

MIXED.—One whistle signifies to go to starboard, to do which the usual helm is ported. Two whistles means an intention to pass to port. Then starboard your helm. How your wheel goes has nothing to do with it. Some work with the helm, others opposite to it. Therefore, all signals of the rule of the road refer only to the helm leading forward.

W. G.—Arrow belongs to Mr. Ross Winans. Is now laid up at Baltimore. Was built in 1874 by Kirby, of Kye, Westchester County, N. Y. Over all, 65½ft.; water-line, 61½; beam, 20ft., 2in. hold, 6ft. 4½ft.; draft, without board, 5ft., 4in.; cubic contents to outside of plank, 3,847.51ft.; hoist about 60ft.; boom about 65ft.; gaff about 35ft.; bowsprit, outboard, about 25ft. Mischief has about 61ft. hoist.

S. S. G.—I want a good, reliable, breech-loading, double-barreled gun, choke-bored, etc., and wish to know if there is any real utility in the extension rib put upon all lately improved guns? Some call them only unnecessary prolongations to knock knuckles against, and the hole into which the rib fastens, a catch-all for dirt, etc. Ans. The extension rib is a most decided advantage. It is simply added strength.

F. K., Jr., New York.—1. Is shooting allowed Sundays in Rockland county, N. Y.? 2. Is there any kind of game to be found in Ramapo, N. J., or in any place along the line of the N. Y. L. E. and W. R. R. no further up than Sloatsburg? 3. Is there any fishing to be had in the Ramapo River? 4. Are small catfish caught in ponds capture? Ans. 1. No. 2. Ruffed grouse and in wet seasons woodcock. 3. A few pickerel and perhaps a very few trout. 4. Yes.

EXETER, Bradford, Pa.—In a successful woodcock expedition in Allegheny County, N. Y., last week, we came upon a pair of quail with a brood of young ones that could not have been out of the shell more than twenty-four hours. Do they commonly hatch so late? Ans. The hatching was a late one; very probably a second brood, or perhaps the first nest was destroyed by some accident. We have, however, seen just hatched quail from New Jersey early in November.

PLUVER, Boston.—1. Is there any objection to use an ungreased wad over the shot in a breech-loader? 2. What is the advantage of greased wads over the powder? I asked you recently what size shot to use for fall plover at 60 yds., and you said it was impossible to answer such questions; so I experimented, and found that No. 7 was the size to use, No. 8 being a little too small for late birds at that distance. Ans. 1. Better to use an ungreased wad over shot. 2. Lubricate the barrel. Your useful hints about pattern tests will be published next week.

S. C. P.—Berthon's boats are not to be had in America. They are pretty high in first cost, and with duty added would be expensive. They are also heavy for small yachts. Some of our advertisers make a folding canvas boat, which may suit your purposes. Or else, have light cedar or white pine skiff built, say 8 or 9 ft. long, square stern, slight crown fore and aft to bottom, and fit with light zinc or galvanized iron air tanks under thwarts, making them life boats, even if filled. Weight, 40 lbs. No special oil stove for yachts made in America.

P. S., New York.—I have a fine Scott gun, 10 gauge, cylinder bore, chambers a 2½ inch shell. The end of the chamber is hardly perceptible to the touch. On looking through the barrels I can see a fine line. I generally use 2½ inch paper shell. I have a

number of 2½ inch brass shells. Will the use of 2½ inch shells in my gun cause poor shooting? Ans. The 2½ inch shells will probably give in ferrier shooting, but you can try it and may, perhaps, find the contrary to be the fact. It is not always possible to tell just what a gun will do under such circumstances.

CONSTANT READER.—Is there on record the weight of the largest striped bass that has been caught with a rod and reel? If so, please what is the weight? How large do these fish run? Ans. It is possible that the Cuttyhunk Club have such a record, but we have not access to it now. Norris says (p. 82): "They have been taken with a rod and line as high as forty or fifty pounds," but gives no instances, and other angling books are equally silent. We see them in Fulton Market from the middle of May to the last of June, weighing from forty to sixty pounds, and they are said to reach 100. These large fish are always females, and are caught in nets.

A. F. C., Sunbury, Pa.—I notice you mention the Wickersheimer process for preserving fish in connection with the 8½ pound trout of A. B. Shipley & Sons. Will you please describe the process? Ans. It is the invention of Prof. Wickersheimer, of Germany, and consists of a fluid which is injected into the heart of an animal, and so through its circulation. We saw it at the International Fishery Exhibition at Berlin, where he had enormous serpents which looked to be just dead, but which had been prepared for three years. Skeletons were prepared by immersion and were perfectly flexible, while the lungs of a dog could be inflated and respiration shown. The eyes of the fishes were sunken, but they were perfect otherwise. We learn that it is to be introduced into this country, and it will be invaluable for preserving such objects as crabs, spiders, etc., which after two days immersion remain flexible, so that all natural movements can be made by the limbs and mouth.

H. N. B., Boston.—In August last I spent a week at Webster Lake, Franklin, N. H., and some black bass caught had small black spots in their flesh. Saturday I took a trip again, and in those caught found them full of the specks, and cannot find any one to tell what it is. I send you small pieces in glycerine, and if you will put in "Answers to Correspondents" what they are you will oblige a number of your readers. The lake is made up from Highland Lake Andover and springs; very clear and pure water. I have read FOREST AND STREAM the past five years and have seen everything else about fish but these spots. Ans. We have placed the flesh of the fish containing these spots referred to in the hands of a microscopist, who reports that they are neither clusters of parasites nor encysted worms, but appear to be a cluster of pigment cells, and asks if the strips were taken next to the skin or deep the muscular tissues. He finds these clusters to be harder than the surrounding muscle, and about one-sixtieth of an inch in diameter, after being shrunken in glycerine. To the eye, the strips of flesh with the black dots resemble the eggs of some batrachian.

FOREST AND STREAM,  
A WEEKLY JOURNAL,

DEVOTED TO SHOOTING, THE KENNEL, THE RIFLE, ANGLING AND OTHER FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUTDOOR RECREATION AND STUDY.

## THE FOX GUN!

Special Announcement.

THE MANUFACTURERS OF THE "FOX" GUN, FEELING THAT DEALERS, as a general thing, have not done justice to the merits of this WONDERFUL GUN, are determined to have them placed before sportsmen more generally, that their great merits may become better known and appreciated. It is needless to speak of THE ELEGANT WORKMANSHIP AND WONDERFUL SHOOTING POWERS of these guns. It is a fact well established that they are UNSURPASSED BY ANY IN THE WORLD.

We propose for a limited period to offer a line of these guns at the following EXTREMELY LOW PRICES, after which the original prices will be restored, our object being to introduce the guns into sections of the country where dealers have failed to present them; in the firm belief that where they become known they will be the established favorite, and we shall reap the benefit in future of this great sacrifice.

Such Inducements Have Never Before Been Offered.

Sportsmen wishing to purchase one of these beautiful guns must respond at once, as the number offered at these prices is limited.

	FORMER PRICE.	NOW.
Twist Barrels, 12 or 10 Gauge, Pistol Grip, Reb. Locks,	\$58 & \$63,	\$40.

THE AIR. Sportsmen will at once appreciate the advantages. Price \$1.

Agents: HARTLEY &amp; GRAHAM, New York.

## TRADE—"BEATS THE WORLD."—MARK. Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

OR melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing  
to the fact that this process has been used exclusively in their manufacture, no one else having the  
right to use it. The great advantage and importance of this invention will at once be recognized by  
all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke.

Manufactured by GOODWIN & CO., 207 and 209 Water St.,  
NEW YORK

Our stock of breech-loaders is more complete this season than ever before, and is adjusted to meet  
every want. It embraces among others: **COLT'S CLUB GUNS** (genuine) for glass ball and  
pigeon trap shooting, where closeness and great penetration are required. **WEBLEY'S  
SPECIAL GUNS**.—These guns contain every appliance which can contribute to beauty, conveni-  
ence, or excellence in shooting. A **JOB LOT** OF WEBLEY'S GUNS, of many kinds, mostly  
heavy, and specially adapted to killing large game, such as ducks and geese, at long range. **ENO'S  
JAMES & CO.'S GUNS**, for all sorts of work, including the **THREE GUN**, or **COMPLETE GUN**,  
designed for the same class of work as the **COLT CLUB GUN**. **FORE-HAND & WADE'S  
WORTH'S SINGLE BREECH-LOADERS**, with **TOP LEVER**. This last is **JUST THE GUN**  
FOR BOYS, or men who cannot afford to buy double guns.

## DUPONT'S

Rifle, Sporting and Blasting Powder.

*The most Popular Powder in Use.*  
DUPONT'S GUNPOWDER MILLS, established in 1803, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

## DUPONT'S DIAMOND GRAIN.

Nos. 1 (coarse) to 4, (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

## DUPONT'S EAGLE DUCKING.

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

## DUPONT'S EAGLE RIFLE.

A quick, strong, and clean Powder, of very fine grain, for Pistol Shooting.

DUPONT'S RIFLE FG, "SEA SHOOTING," FFG and FFG. The FG for Long Range Rifle Shooting, the FFG and FFG for general use, burning strong and moist.

Sporting, Mining, Shipping and Blasting Powders.

Of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.  
N. B.—Use none but DUPONT'S FG or FFG Powder for Long Range Shooting.THE HAZARD POWDER COMPANY  
MANUFACTURERS OF  
GUNPOWDER.

## Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound or one-half.

## Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to shotguns.

## Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

## Hazard's "Kentucky Rifle."

FFFG FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and 1½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

## FOREST AND STREAM.

NEW YORK, THURSDAY, OCTOBER 21, 1880.

**A LIVE PAPER.**—In the last numbers of the *FOREST AND STREAM* were published communications and notes from more than eighty correspondents; and the "Answers" columns contained replies to forty-six others—a total of more than 126. These writers represented twenty-four different States and Territories, besides two foreign countries. The same issue contained the advertisements of 175 advertisers, representing an aggregate capital of many millions of dollars.

In the number and character of the contributions of its friends the *FOREST AND STREAM* is altogether unprecedented in American journalism. We are publishing a live paper, every week, and fifty-two weeks in the year.

Appreciating the continued courtesy of our friends, we cordially invite each one who can add to the general store to send in his quota.

**FISHING FOR COUNT.**—We have spoken in no uncertain tone upon several occasions of the destructive practice of killing small fish for the purpose of swelling the count. We intend to keep at it until the whole body of anglers join in the chorus and cry "shame" on the man who is guilty of it. The review of the report of the New Hampshire Fish Commission, in another column, contains something which all gentlemen anglers should read to every hog fisherman that they may happen to know.

**GO AND SEE THEM.**—In a little inclosure in front of the Merchant's Hotel in Cortlandt street are to be seen two quails, a sora rail and a gray squirrel. They are all in good condition, fat and lively, and seem to agree together excellently.

#### HOW THEY DO IT IN BLOOMFIELD.

**BLOOMFIELD** is a little New Jersey village not very far from Newark, and if the reports which reach us are authentic, we do not hesitate to say that it will be a favorite resort for quail from this time forth. Certainly if these birds could read the *FOREST AND STREAM* they would gather there in great numbers after they learned about Squire Hall and his Daniel-like decisions.

It appears that not long ago a certain Mr. Van Tassel, of the above-mentioned town, discovered not far from the railroad depot a little bevy of quail. These innocent birds, well knowing that the close time in New Jersey had not yet expired, and on that account suspecting no evil, made no effort at flight or concealment, but quietly went about their ordinary avocations and fed along as usual. The sight of the bevy was too much for Mr. Van Tassel, however. He at once went for his gun, determined to secure those quail. No dog was required. The shooter knew a trick that quite casts in the shade the ordinary methods of sportsmen. He walked up to the unsuspecting birds, quietly herded them until they were well huddled, and then, giving them both barrels, secured ten.

So far all was well. Matters had gone admirably for Mr. Van Tassel, if not for the birds, and the "sportsman" had already begun to consider the language in which he should announce his fine "sport" to his comrades, when the game constable appeared on the scene. Mr. Van Tassel was at once hauled before Squire Wm. R. Hall, and was promptly fined \$15 per bird and costs. He, however, appealed to the January Term of the Court on the main question, paying the costs then and there. We trust that there is no doubt but the higher Court will confirm the Justice's decision; but even if it should not do so, we presume that Mr. Van Tassel will consider that his fracture of the law has cost him more than it was worth, and that his birds were dear.

Some people in Bloomfield manage to get their birds out of season at a less price than \$15 each. Thus Mr. Cadmus, going out with a dog, killed a quail, and appearing before Squire Hall complained of himself, paid his fine of \$15 and received the informant's half—\$7.50.

This is the way they do things in Bloomfield, and a most excellent way it is. We wish that a little of the same spirit could be infused into a number of other localities that we could name, and indeed throughout the country.

We are reliably informed that an individual, whose name we have, recently killed two quail near Newark, N. J., and exhibited them to sportsmen of that city. Is not this a case for the Essex Gun Club to take hold of?

#### THE NEW YORK GAME LAW.

ON another page will be found the admirable analysis of the New York game law, prepared by Abel Crook, Esq., president of the New York State Association for the Protection of Fish and Game, and read before the last meeting of the Long Island Sportsmen's Association. This synopsis was made to show what the provisions of the law are at present, and also to serve as a basis for intelligent work in amending the law where it needs amendment, and of framing it in such a way that every one may understand it. It is published in the *FOREST AND STREAM* for these purposes. At the coming session of the Legislature at Albany, the Standing Committee of the State Association propose to present a new game law, and in order to frame one which shall meet the approval of sportsmen throughout the State upon every point of its provisions, it is desired to hear the views of all who are interested. The readers of *FOREST AND STREAM* are called upon to study the law as it now stands, and if they have any suggestions to offer regarding any portion of it they are requested to write the same to the committee in charge at an early day, addressing all communications to Abel Crook, Esq., No. 99 Nassau street, New York city.

It is particularly requested that those who wish changes made should furnish facts to substantiate their arguments. The committee want the actual experience of practical men on these points. Having all the facts before them they can intelligently proceed in their work.

This is a most sensible way of setting about the task. The opportunity is now offered to every man to put in his

views on any particular point of the law. Let each one improve the occasion to speak, or forever after hold his peace. There is no good reason why the New York game law presented at Albany next winter should not embody the collective wisdom of the sportsmen of the whole Empire State, and be therefore free from evil.

The committee of the Long Island Sportsmen's Association, who will consider the law with reference to Long Island and suggest any needed changes or special provisions required for that section, are Messrs. Geo. A. Clappell, Dr. Henry F. Aten, Dr. Wm. Wynn, Abel Crook, Austin Appleyard, Judge Henry S. Lott, Chas. W. Havemeyer, Sam. S. Conant and Henry Altenbrand. It is hoped that other game protective clubs throughout the State may appoint similar committees to discuss the law and report in the same way.

The Standing Committee of the State Association, who will prepare the law, are: Abel Crook, Robert Robinson and Henry Altenbrand, of Brooklyn; J. H. Williams, Dansville; Jacob Witmer, Niagara Falls; and Henry H. Morse, of Rochester. Mr. Crook, who has had much experience in framing laws, proposes to make the new game law a model of brevity and clearness. It will be substantially (1st) a legal definition or construction of the words "close season," (2d) the provision of a "close season" for the specific birds, animals and fishes, (3d) the exceptions, (4th) miscellaneous provisions, (5th) uniform penalties, (6th) machinery for prosecution.

The officers of the New York State Association for the Protection of Fish and Game, and the Long Island Sportsmen's Association, who have charge of the next convention, are deserving of the highest commendation for inaugurating a new order of things and making the society what its name implies that it should be. Their course will be cordially endorsed by the sportsmen of the State, and many of those who have lost their interest in the society and held aloof from its conventions will now accord to it their strongest support. Believing that we voice the sentiments of the entire sportsmen's community we hasten to congratulate the promoters of this new movement, and to bespeak for them a complete success in their efforts.

#### SOUTHWARD.

**WITH** the approach of winter weather those sportsmen who annually spend a winter at the South are already turning their thoughts thither and preparing for the campaign. From our correspondence we infer that Florida will be this year, as heretofore, the resort of the majority of Southern tourists. As is usual at this season of the year the *FOREST AND STREAM* is in receipt of numerous inquiries for the best shooting and fishing localities; inquiries which year by year it is more difficult to answer.

The day has almost passed away—we shall rejoice to see it wholly gone—when game can be butchered from the deck of a river steamer. Every Florida visitor must be familiar with the savages hailing from Northern cities, who stand on the steamer's deck as she makes her way up the stream, and blaze away, right and left, before and behind, at every living creature on the banks—birds, beasts and reptiles. There is less of this disgraceful business now than there was once, but this is due rather to a decrease in the supply of game than to any diminishing of the hordes of butchers or abatement of their murderous craving for blood. And just here we may throw out a hint to the owners of the vast herds of wild cattle which roam through the Florida woods. Bye-and-bye, when game becomes so scarce that the being clothed in velvet and brass buttons, bearing a gun and with it the general appearance of a rowdy, cannot satisfy his appetite for gore in the old way, he will turn his attention to your herds, and shoot down your defenseless cattle, until they too are exterminated. So will the price of Florida beef go up, and the famine thereof be ascribed to the political administration.

The man who seeks in the South pleasure and health, and who is contented with the legitimate pursuit of fish and game will still find abundant shooting territory in Florida, provided he turns aside from the guide book routes and leaves the regular circuit of the multitude. The southern and south-western portions of the State are supplied with a fauna which will well repay the journey thither. We have on hand a variety of letters relating to the different sections of

this sporting country, and these will be published at an early date.

While Florida stands first as a winter sporting resort, possibly because it has been so much talked of, there are many other sections equally as attractive and equally rich in game. In the North and South Carolinas, Georgia, Alabama, Arkansas, Louisiana, Texas and in short throughout the whole South, are vast tracts where game is abundant, and where the sportsman tourist may find not only the best of sport but a hearty welcome among a hospitable people as well. The rod and gun are passports to good fellowship the world over, and no one feature of a journal like the FOREST AND STREAM is more significant than its chronicles of the warm reception accorded by the people of one section to their guests from other sections.

#### REPORT OF THE NEW HAMPSHIRE FISH COMMISSION.

THE report of the New Hampshire Fish Commission for 1880 opens with the statement that salmon culture in the Penigewassett has been a grand success, and that they have taken over 100,000 eggs from fish which had been artificially hatched from eggs taken from the Penobscot River and planted in the Penigewassett, and which had passed up the fishways over the dams at Lowell, Lawrence and Amoskeag. This is indeed a grand success, as the fish are proved not only to live, but have returned to their native streams to breed. The Commissioners are inclined to think that the twenty-two fish taken at Plymouth represent the planting of three different years—1872, '73 and '75—as their weights varied from eight to twenty pounds; while one which passed their nets was found below Livermore Falls with several of his ribs crushed in and broken away from the backbone—probably in attempting to ascend the falls—which weighed twenty-eight pounds, and might have been a survivor of earlier attempts at stocking the river.

Brook trout have been distributed to many streams, and an increased number are expected this year. Land-locked salmon eggs have been received to the number of 67,000 as their share of the crop of the joint stock establishment at Grand Lake Stream, in Maine.

The observations at the Lawrence fishway from May 5 to November 1 are interesting. No fish were seen until May 9, when two "suckers" (*Catostomus*), and one brook trout were noticed; and on the 12th, alewives, suckers and two lampreys were seen, and these increased and decreased each day until June 2, when the record says: "Alewives and suckers run very large; a few lampreys and three salmon, ten to twelve pounds." (Why cannot our Commissioners set the example of a proper nomenclature, and not call a lamprey a "lampreel," when it is not an eel at all, nor even distantly related to it?) On the 5th "one shad" is added to the previous list, and a black bass also appears; while the alewives, suckers, "clubbs," etc., keep right along, interspersed with an occasional salmon, until the 30th, when no salmon are recorded until August 27, and again on October 8, making about thirty seen during the season.

Commissioner Powers reports to Mr. Brackett, of Mass., that 367,500 California salmon fry were distributed in January as follows: 25,000 to the Contoocook River; 28,000 in Salmon Falls River; and the remainder in the Penigewassett, and that they could be seen until last August anywhere in the river near the hatching-house, and were then from three to five inches long, and very lively and apparently healthy. Twenty-two Atlantic salmon (*S. salar*) were taken during the season, weighing from eight to twenty pounds each, thirteen of them being females, yielding together over 100,000 eggs. Mr. Powers further says: "For over thirty years not a salmon passed up the Penigewassett. This is the first time—in this country, at least—that any considerable quantity of eggs have been taken from mature salmon caught from a depleted river artificially restocked. The result cannot fail to be highly gratifying to those who have, or have had, the matter in charge, and has, to a certainty, demonstrated the faith of the few who argued that the rivers could be restocked to advantage was well founded. Those who have believed it impossible must now be convinced that it is not only possible but quite practicable."

Two thousand eggs of the California "mountain trout" (*Salmo irideus*) were received from Prof. Baird and were hatched. What the Commissioners say about fishing for trout is so plain and to the point that we gladly give it entire. They say: "We must repeat what we have said before, that the depopulation of our brooks is largely owing to the persistent capture of the yearling fish, from two to three inches long, before they are old enough to reproduce their species, by the cockney fishermen and careless boys, who aim at getting the largest number possible, and either say, 'Every one counts,' or, 'the small fish are the sweetest.' Possibly they are to any one who is fond of salt pork, for these little yearling trout taste of very little else when cooked, the small proportion of fish flavor being entirely overwhelmed by the larger ratio of the 'essence of hog.' It may be the affinity between the biped and the quadruped which accounts for this taste."

It is interesting to note that attention is being paid to the migration of lampreys, which are largely eaten in New Hampshire and some neighboring States, but which are rejected as food in New York. The report says that this fish "came up the Merrimack as far as Lowell, and Messrs. George Liddle and J. L. Stevens, of Manchester, made two trips to Lawrence

and procured several hundred, which they placed above the Amoskeag dam. They propose to repeat this work next month, so that we may reasonably expect to see these fish back in numbers in a year or two, though perhaps not in such quantities as when they obtained the title of 'Derried fish beef.'" An appendix contains an address delivered before the Fish and Game League, April 6, 1880, by ex-Gov. B. P. Prescott, in which he advocates fishways and protection. A list of the lakes and ponds in the State closes the report.

BLUE-FISHING ABOUT LONG ISLAND.—Of all times in the year the bluefishing is usually at its best in October and November, and the present season is as good as in any previous year. Last week the catches were plentiful all around Long Island, and we have no doubt of their being as good in other waters, but we personally know that they were excellent off Fire Island, Gardiner's Island and Long Island Sound, some "fifteen pounders" having been captured in Plum Gut. Not only is this fish, which east of New Jersey is a "blue fish" and south of there a "tailor," exceedingly plentiful now, as it has been all summer, but this is the season for the large ones to come in, and they are in the very best condition attained by this excellent and gamey fish. New Yorkers can now take Long Island Railroad at either Flatbush avenue, Brooklyn, via the down-town ferries, or by Thirty-fourth street ferry to Greenpoint, and in a few hours are landed in any part of the Island they may wish to visit, as the road branches in all directions. Smaller fish are found in Great South Bay, but the large ones seldom enter, and are caught just outside the inlet; and as the bay is shallow and full of "weed" those fishing inside must take their fish by clumming, which, by the way, is the most sportsmanlike; but if you prefer the sail with a trolling snag then outside is the proper place. The bluefish is so savage and voracious that the smaller ones never care for the company of their larger relatives, hence a school will usually contain fish of nearly one size, and when taking "three-pounders" it is seldom that one of twice that size is struck. It is a notable fact that while the other food fishes are decreasing in numbers the bluefish, *Pomatomus saltatrix*, is really increasing, and fifty years ago it was unknown on our shores.

PENNSYLVANIA FIELD TRIALS.—The arrangements for these trials are now completed, they will be run at the terminus of the Quarryville R. R., which is about fifteen miles south-east of Lancaster, in Lancaster County. The grounds have been preserved for several years and quail are very abundant, besides birds will be on hand for stocking should there not be a sufficient number found on the grounds. The entries to the trials made to the secretary are reported to be nearly full.

### The Sportsman Tourist

#### "HO FOR THE MAGANETTIVAN!"

WE hereabouts are persistent fishermen—not a bass in Fall Creek or White River that is not acquainted with us by sight; but I doubt that Indianapolis will ever become a fishing resort. A year ago I announced that I would never again wet a line in Indiana; of course I have broken the resolution. When my neighbors don't like to be bothered and assume if I "have any sand," I am likely to say that I have, and in an hour or so I am basking in the sun in the neighborhood of Broad Ripple, hoping for a bass, expecting a goggle-eye and hauling in a small sunfish. Along in the spring my eye was riveted by a well-written advertisement in FOREST AND STREAM, headed "Ho for Maganettivan!" I consulted "Hallock's Gazetteer," and that settled it. On the 7th of July I was on the way to Toronto. It is a question what is the proper number constituting a party for fishing. I have spent a great deal of time in organizing expeditions; I have begun early in the spring to agitate the question and to fire the hearts of my friends. I have now and again succeeded in making up a party of four and even six; but it is an uncertain number, fishing is uncertain, fishermen are uncertain and also the wives of fishermen. It is a sickening thing to set the day, make all things ready and find that the elect gentlemen have had a change of mind. A party of one can be depended upon; so it was that I sat lonely at the Queen's Hotel, Toronto, and mused on Muskoka and the regions beyond.

Mr. McGraw, manager of said hotel, is a fisherman's friend; he introduced me to Mr. J. M., a gentleman well known to theatre-going people, and J. M. and I "pooled our issues," bought a "phantom minnow," and made for the north. The latter part of the day's journey by steamboat to Rosseau is pleasant. We passed several camps, the most noticeable of which was that of the "Solid Comfort Club." We were forewarned that Mr. Pratt, the proprietor of the Rosseau House, is peculiar; undoubtedly he is. He is neither childlike nor bland in manner, but after a two weeks stay with him we decided that no man in Ontario could have done more to make the days pleasant. Having paid my bill I felt free to say that the hotel is excellent, and I know of no place where the summer sunnier gets more for his money. Others have said that the fishing is superb, and I believe that is the word.

The fish are not yellow nor striped nor silver, but black bass, and die game. We failed in fly-fishing and fell into the custom of the country and used the old-fashioned, reliable angletworm. It is a trifle nasty, but it does the business. The Toronto worm is the thing. The home crop of worms is scant. Sand and rock is not the proper environment for a worm—he runs too much to skin, although in one corner of Mr. Pratt's garden there is a preserve where the worms are tolerably fat; but digging them by daylight is attended with considerable risk unless in the absence of the proprietor. The fishing (of the kind) leaves nothing to be desired. The boats are excellent, the boatmen expert. There is no use in stating the number of fish that Webster, our boatman, brought in night after night as I desire when I write anything to be believed. There is a variety of lakes to visit, enough to consume the days, and at evening one can sit and hear Angus Morrison, M. P., tell marvellous stories, see the landlord welcome his guests, and at night sleep undisturbed by mosquito or—

The weather was perfect—the monotony was broken by fine thunder-storms—but the aforesaid advertisement, "Ho for Maganettivan!" clipped from your paper, was in my pocket, and my object being trout, I took the stage for the famous river. The road is "Adams' Road and not McAdams." It has been cursed a good deal by the profane passengers, but for a road that leads to fishing it is uncommonly good. Trout and turpicks are not usually in conjunction, unless they be trout raised by machinery and fed on liver. Clark's at Maganettivan Village is a hospitable inn. The Maganettivan is a noble river, but dipping my hand in it settled the trout question. The water in July and August is too warm; May, June and September are the months in which to fish for what I believe some one has termed "speckled beauties."

For a day or two I turned my attention to bass with good success. There are deer in this region. July is a little early to kill deer legally, but in a region where the people are so poor as they are in Muskoka the law is lenient. When a man has to put a pallid animal on his cabbage bed to keep the deer out, and has had no meat in the house for seven weeks, to look upon a quarter of venison does not make him angry. Partridges were also abundant, and I have no doubt, more easily digested than bacon. I could only regret that it was the close season for game. My friend, Geo. Ross, can in the proper season show a visitor living moose within two days' journey from Maganettivan. I know of no game region so accessible and so certain to be satisfactory as this. Mr. Clerk or Mr. Geo. Ross will be pleased to put any sportsman who may wish to visit the Maganettivan on the track. Mr. Ross has bounds, tents, boats, blankets and a perfect knowledge of the country.

Muskoka is free land given to the settlers by the government, untaxable for twenty-one years, and not liable for debt. I am sorry that the land is, so much of it, undissolved rock. The people are poor and kind, hospitable in the extreme, and a little money will go a great ways. Any sportsman not a "fender-foot" cannot fail to remember pleasantly his sojourn in this region. Depending on chance acquaintance for company, I have had remarkable good fortune.

Returning to Pratt's, at Rosseau, the bass were still biting, but I left J. M. fishing in twenty feet of water for his elegant rod and reel, inadvertently dropped overboard. There was no sport in that. So, Mr. Editor, I am glad on the whole that my eye rested on the "Ho for the Maganettivan!" and can only suggest that the advertisement be made large enough to state that July and August are not the months for trout.

Indianapolis, Ind.

M. W. R.

### Natural History.

#### NOTES ON SOME MARINE INVERTEBRATES.

IN a recent number of the *American Journal of Science*, Prof. A. E. Verrill gives us some very interesting notes of his observations on several marine forms, made during the past summer at Newport, R. I.

Prof. Verrill spent a portion of the summer at Newport in connection with his work on the U. S. Fish Commission, and the discoveries referred to will, no doubt, be published more in detail in the Fish Commission Report of last summer's work. Perhaps the most interesting of these observations is that of the occurrence at Newport of two littoral species of European shells which have not before been recorded as American. These are *Truncatella truncatella* and *Assiminea grayana*. During the latter part of July and in August numerous specimens of both species were found living among the decaying seaweed at highwater mark on the docks at Newport. Both young and full grown shells were found here. The two species were associated with a number of well known North American genera, such as *Aporrhais*, *Auricularia*, *Chama*, *Ligia*, *Orchestoidea* and other littoral species. It cannot at present be decided whether these shells have been introduced at Newport by shipping, or whether they are really indigenous and have hitherto been overlooked. At all events, the opinion is expressed that they are now well established inhabitants of our shores.

The diffusion of the little shell *Littorina littorea* has been noticed before in these columns, and to what has been said by our correspondents Prof. Verrill adds some interesting facts. It is known that this common European species appeared first on the coast of Maine in 1863, though Dr. Dawson has stated that he had collected it at a much earlier date on the shores of Nova Scotia. In 1872 the United States Fish Commission found it abundant at Saco, Maine, and it was collected sparingly at Peakes Island in Casco Bay. In 1872 it was rare at Provincetown, Mass., but in 1875 had become common. Prof. Verrill found it abundant at Barnstable, on the shores of Cape Cod Bay. At Wood's Hole, on the southern shores of Cape Cod, only two specimens were found in 1875, but in 1876 it was common there, and is now very abundant. During last winter Prof. S. L. Smith found the first specimen detected as far West as New Haven, and since then other specimens have been taken there by Mr. E. A. Andrews and by Mr. J. H. Emerton. It is now very abundant at Newport.

*Ciona ocellata* is another invertebrate which Prof. Verrill found abundant at Newport. This large and beautiful ascidian is to be found on rocks and on the piles of wharves at low water, and on dead shells to a depth of twenty fathoms. It would seem to be very local in its distribution, for Prof. Verrill has never found it at any other locality on our coast. This species grows to a length of four or five inches, and is about an inch in diameter. It is quite translucent, and the internal organs may be seen through the pale greenish or yellowish white test. The apertures are surrounded by a circle of bright lemon yellow, and the ocelli are bright red. This species is said by Binney to have been first found by Agassiz at New Bedford, Mass., and by him named *Ascidia ocellata*. It is figured in Gould's *Invert. of Mass.*, but not described.

TEMPERATURE AND RAINFALL LAWS FOR LONDON.—An interesting paper, read at the last meeting of the British Association for the Advancement of Science, attempts to answer the question: Is there to be found any definite relation between extremes of rainfall or temperature in any month or season and the weather or temperature of the month or season next following? The author, H. Courtenay Fox, M. R. C. S., bases his conclusions on data obtained from an examination of the observations on monthly temperature and rainfall, as recorded at the Royal Observatory during the sixty-six years from 1815 to 1880. As a result of his investigation he lays down the following definite propositions:

1. A cold spring is very prone to be followed by a cold summer, a cold summer tends to be followed by a cold autumn, and a cold autumn has a slight tendency to be succeeded by a winter of low temperature.
2. Warm summers are generally followed by warm autumns.
3. In no fewer than eight out of the twelve months (that is in every one except February, March, May and October) very low temperature tends to be prolonged into the succeeding month.
4. If June, July, August or December be warm, the next month will probably be a warm one also.
5. Two months (June and July) tend, when very dry, to be followed by dry ones. On the other hand, a dry August indicates the probability of a wet September.
6. A wet December is apt to be succeeded by a wet January.

Besides the foregoing, there are a few instances in which the rainfall of certain months appears to bear a definite relation to subsequent extremes of temperature.

7. If August or September be warm, the ensuing September or October inclines to be wet. If, on the other hand, September or November be cold, the succeeding October or December is likely to be a dry month.
8. If February, June or July be very dry, the next month has a strong tendency to be warm.
9. If January, March or April be wet, we may also expect the next month to be a warm one. But a wet May or July gives a strong probability of cold weather in June or August respectively.

SHARKS SWALLOW THEIR YOUNG.—A short time ago Mr. Blackford of Fulton Market, New York, received a specimen of the "porbeagle," or mackerel shark, *Isurus paucus* (de Kay) which was caught near Great Neck, Long Island, and proved to be a female which measured six feet eleven inches in length. Mr. Blackford said:

"When I received her she had been dead more than seven hours. From the immense size of her stomach I thought she must have swallowed a barrel or two of moss bunnies, and to satisfy my curiosity I opened her. Imagine my surprise. When instead of moss bunnies I found ten little sharks, evidently her offspring, and all just the same size—exactly two feet long. I should say they were about six months old, for a young shark when hatched from the egg measures about ten inches. There was no mark upon them as if digestion had begun."

The question was raised whether they were taken in for food or for protection. If, however, they were taken as food one redeeming quality can be placed to the account of sharks.

FLINT'S FIELD NOTES.—Warrenton, Va., Oct. 11.—Editor *Forest and Stream*: I give you the following memoranda from my note-book:

1880.—April 23. Hunted over our "snipe ground;" no snipe, birds all shot.

April 27—Saw Baltimore oriole for first time; saw Aspen oriole on 24th inst.

April 28—Reliable informant saw yesterday twelve English mocking-birds in a flock; says they raise their in great numbers every year, building in large thorn bushes; think they had just returned from South. Saw to-day the first catbird of the season.

Oct. 9.—Caught with hook and line, in Rappahannock River, twenty-one "carp" and chub; in carp about one-half pound weight and full-roed. Do fish under favorable circumstances—open winter, etc.—spawn twice in twelve months?

An "old fisherman" tells me the advanced condition of these spawners indicate an open winter; says "jackfish" shed their teeth every moon; they bite best on the dark of the moon; has occasionally caught them on the light of the moon, when their gills were red and showed recent shedding of the teeth. In cleaning the "carp" discovered two small parasites clinging to the tongue; thought they were diminutive locusts. Until reading *FOREST AND STREAM* of 7th inst. What were they?

In July, while fishing in the Shenandoah for bass, took in a sucker floating belly up. When turned over back presented appearance of decomposition and escape of gas. (Closely inspection showed a multitude of slippery, gelatinous-looking parasites, wriggling about like diminutive crabs; fish was plump and recently dead. What were these wrigglers?

The article in *FOREST AND STREAM* on "Frogs Capturing German Carp" recalled the fact that when a boy I caught a large water or bull-frog which was in the act of swallowing a smaller "brother." The legs sticking out of the corners of his mouth gave me the idea of his being a "horned frog," of which I had read, but never seen.

In July, 1884, in Dinwiddie County, Virginia, I witnessed the attempt of a black snake to swallow a garter snake of equal size, which he had captured and killed by constriction. I could hear the bones crack in the deadly embrace. My companion spit tobacco juice in the black snake's mouth and caused him to eject his anticipated *bon bonche*, and then killed the black snake.

It is doubtful if any individual fish spawns more than once a year, although some species which spawn in summer are so irregular as to appear to do so. The cyprinoids (carp-like fishes) spawn from May to September, and even cover a longer period in some localities. It is possible that your fish,

for some reason, did not spawn early, and that, developing so late, it might be checked by cold weather. Carp do not grow in cool weather, and so spawn partly developed might be checked. Your "carp" was probably uncolored gold fish and not the true carp which have lately been brought from Germany and bred in Washington for distribution. It is impossible to say what the parasites were from the description, and if we had them we could perhaps only give you a long technical name of more or less jaw-twisting capacity. The best plan is to study the habits and structure of such parasites, and then you will know all that is known of them, which is very little, except the systematic cognomen.

EXPERIMENTING WITH SNAKE POISON.—The following dispatch to the *Herald* contains information which, if authentic, is of very high importance, and further information on the subject will be anxiously looked for:

Rio Janeiro, Sept. 14, 1880.

There was some excitement and much talk about the scientific enthusiasm of Dr. Stradling, a surgeon on board the Royal Mail Company's steamer *Elbe*, who had horrified the crew and passengers of that vessel by testing upon himself the efficacy of an antidote for snake bite which he had discovered. At Bahia he succeeded in purchasing a large rattlesnake, which he conveyed on board surreptitiously, and, locking himself up in his cabin, deliberately made the snake bite him, with the result that he was found, some twelve hours later, in a state of coma, from which, however, he was recovered without great difficulty, and declares that for many hours the venom had been without effect upon him. Being remonstrated with by the Captain, Dr. Stradling promised "not to do it again." But it was too much for him, and at Rio Janeiro he went ashore one evening, leaving a letter to the effect that he "was going ashore to try his antidote, so as not to break his promise (in the letter, at all events); that he felt confident of success, but that they would know what had become of him in case he failed to return," etc. Of course this letter caused his friends much anxiety till next morning, when, just as they were sending off to the police, Dr. Stradling appeared, "radiant," showing a fresh bite on his arm, and declaring the experiment to be entirely successful, although he would not tell in what consisted the specific so marvelously effective. Dr. Stradling has been employed as surgeon of Royal mail steamers for some time, and has given particular attention to the study of the various reptiles found in Brazil, but had never previously carried his devotion to science so far. He is much respected by his shipmates and by passengers on his steamer as a clever and scientific physician, and his loss would have been much regretted. The knowledge gained by him may be very valuable to others, and Dr. Stradling declares his intention of publishing his discovery as soon as he reaches England.

A TAME DEER.—Some quite interesting facts in relation to the domestication of deer have just come under my notice.

The prominent angler of Marinette, Wis., Mr. A. C. Merryman, some two years since secured from an Indian a young doe fawn, which he sent to Mr. J. A. Asher, the Superintendent of the Hamilton & Merryman Co. firm that is located forty-five miles from Marinette, in the forest of the Michigan Peninsula.

The fawn became a great favorite, and was allowed full liberty, notwithstanding the clearing was frequented by wild deer, hunters and Indians. A strap carrying a small bell was attached to a neck, and this fully protected her during the first season.

She roamed about at will, sometimes absent for days together, but returning to her civilized protectors, manifesting great delight for all attention. She is now two years of age, and is the mother of two beautiful fawns.

The bell that has saved her life among the Indians and hunters had no terror for her wild companions, as these fawns were sired by an untamed father. On one occasion an Indian came to the farm bringing a saddle of venison with him to sell, and trotting behind him came the doe from the woods. The Indian had killed the deer while it was in company with the doe, and she had stood by while he was dressing it, and then followed him to the clearing.

A STRANGE FOSTER MOTHER.—Belleville, October 11.—Editor *Forest and Stream*: Under the heading of "Tame Quail" in your last issue, I notice an article by "Lutron," in which he tells of three quail being found with a flock of tame turkeys. I can tell of a similar incident, perhaps still more remarkable. My brother-in-law, living near Centerville, Ill., had a turkey hen which made her nest in a ravine not far from the house. A very heavy rain having fallen, he flooded the ravine as to wash out the old turkey hen's nest. She wandered about for a day or two disconsolately, and then disappeared altogether, coming back occasionally to feed. The family supposed she had made another nest, and was again laying.

What was their astonishment to see her come to the house with thirteen little quail! She must have found a quail's nest in her wanderings, and deliberately sat on the eggs and hatched them. The young quail seemed perfectly satisfied, and were getting along very nicely, but were carried off by hawks, one by one, until all were gone.

A GOOD WORD FOR THE SPARROWS.—I send you by this mail a lot of leaves of the maple growing in front of my office, which when gathered were literally covered with lice. What attracted my attention to them was the busy action of some two dozen English sparrows, hopping here and there in the tree, peering under the leaves, and savagely feeding on something. An inspection revealed the cause of their eagerness, and the cause of the early shedding of the leaves. Excuse me these vermin and tell us what they are. The sparrows were so busy they would scarcely keep out of the reach of my hand. I called the attention of several gentlemen, who watched them for some time. This proves (to me) the insectivorous habits of the English sparrow. In the yard, every season, a pair of robins (*Turdus migratorius*), the little brown wren and at least two dozen pairs of English sparrows build, and raise their broods without any fighting. The only occasion when a "rumpus" is made is between the cocks when the nesting season arrives. I have counted as many as ten cocks around a single hen, fussing, fighting and "carrying on" at a rate enough to deafen any one.

The insects seen are apparently the ordinary Aphides, or "plant lice," so injurious to green-house plants.

PLEW AGAINST THE LIGHT.—Stopping at our mutual friend, John Kridler's, this morning, I was shown a large quantity of warblers and other birds that had been sent him by the light-

house keeper at Atlantic City, N. J. They were found at the base of the tower, having flown against the light in a nightly migration during a late storm. They comprised the following varieties: Blue-winged yellowbills, indigo birds or blue linnets, black-throated blues, red-eyed vireos, red stars, black pool warblers, Connecticut warblers, black and white creepers, olive-black thrushes, Maryland yellow-throats, yellow-rumps and magnolia warblers. This was doubtless the great Southern migration which takes place every autumn. During the fall, about four years since, the wife of the keeper of the same lighthouse caught alive several brant which, during the prevalence of a fog, had entangled themselves in the grating protecting the light. These birds are now alive, one of them, I think, having been presented to the Zoological Garden at Philadelphia.

ROBBING THE FISH HAWK.—Baltimore, Oct. 4, 1880.—While on a fishing trip down the Gunpowder River a few days ago we witnessed an interesting sight. A fish hawk that was hovering over the water suddenly made a plunge, and arose with a large taylor in his talons. He sailed leisurely over the land toward a dead tree near the shore, doubtless thinking he would have a nice meal. Just as he neared the tree to alight a large eagle came soaring down upon him, and with one swoop made him drop the fish. The eagle dived after the fish and caught it before it reached the ground, and flew away to enjoy his stolen sweets.

### FISH IN SEASON IN OCTOBER.

FRESH WATER.	
Grayling, <i>Thymallus tricolor</i> .	Black Bass, <i>Micropterus</i> . (Two species.)
Minnow, <i>Leucostichus</i> .	Rock Bass, <i>Ambloplites</i> . (Two species.)
Pickering, <i>Esox reticulatus</i> .	Crutch, <i>Channorynus pulchra</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Crutch, <i>Channorynus nigricaudatus</i> .
Pike-perch, (wall-eyed) pike, <i>Stethacanthus americanus</i> .	Bachelor, <i>Pomoxys annularis</i> .
Striped Bass, <i>Morone americana</i> .	Chub, <i>Sentotilus corporalis</i> .
White Bass, <i>Morone chrysops</i> .	
SALT WATER.	
Sea Bass, <i>Centropristis atraricus</i> .	Sea "Trout," <i>Cynoscion carolinensis</i> .
Sheepshead, <i>Archosargus probatocephalus</i> .	Weakfish, <i>Cynoscion regalis</i> .
Porgie, <i>Stenotomus argyrops</i> .	Shore Whiting, <i>Merluccius littoralis</i> .
Striped Bass, <i>Morone americana</i> .	Croaker, <i>Micropogonias undulatus</i> .
White Perch, <i>Morone americana</i> .	Butterfish, <i>Pomatomus saltatrix</i> .
Spot, or Luteus, <i>Leiostomus xanthurus</i> .	Spanish Mackerel, <i>Scomber maculatus</i> .
Spot, Redfish, or Channel Bass, <i>Sciaenops ocellatus</i> .	Kingfish, <i>Menticoccus nebulosus</i> .
Tautog, <i>Tautoga patagonica</i> .	
Pollock, <i>Pollockius carbonarius</i> .	

### FISHING IN TENNESSEE.

WHILE the heat in our city was almost intolerable, it took but little persuasion to induce me to accept an invitation to this the loveliest stream in middle Tennessee, watering as it does one of the most fertile and beautiful sections of the State. This charming water-course is supposed to have its source in an under-ground lake in Williamson county. This, added to the fact that at every few hundred yards it is fed by cold springs, many of which burst forth from the solid rock in its banks, accounts for the coolness of the water and the consequent superiority of the fish found in it. The bass and black perch, even the catfish taken here, have a justly merited renown for their guinness and excellence as food. When not troubled by freshets, the waters are as clear as crystal, passing over strata of solid rock and gravel, in places forming beautiful cascades, which in turn run into deep pools and eddies in which the fluky beauties delight to exist. Big Harpeth is the residuary of the South, as well as several other river streams which have the same source. In following the winding course of the South Harpeth the roadway is about half in the river and half over gravel beds, the narrow valley being occupied by fields, the rich and luxuriant crops of which made my eyes glad with the prospect of plenty. Where our road lay in the stream, or at places where it crossed, I was struck with the immense quantities of small fish. As Col. Sellers says, "There are millions in it." In the deep holes and under the ledges of rocks and overhanging trees I could see the great fat bass, lolling about as lazily as the catfish on Chikita at Naples. Oh! how I longed for a rod, line and a few lively minnows to take in a mess for supper. At a crossing where the water was not more than two or three inches deep, but within a hundred yards of what is known as the Flat Rock, I saw, angling away as earnestly as possible, my young friend, "Tom Allison." I hailed him, but he was too much occupied to answer at the first call. I was just blowing up to make another when I saw him give a jerk, and in the next instant was reeling and unreeing and laboring with something which it seemed might as well be a ton of lead. In a breathless anxiety I stopped and watched. "That's well, old boy!" Decried the fellow in a hurry, "were the words I found coming involuntarily in whispers from my lips. Just in the midst of my ecstatic reverie "Tom" landed his game. It proved to be a three-pound bass, and a brighter, handsomer one of the species I never saw. "Now, loudspeaker, I am at you. Come and take a hand; or say, wait until morning when they will bite better." "All right," I replied, "and we will be off at once to the house and join the 'Squire.'" This last-named was "Tom's" father, and a finer specimen of the old Tennessee farmer cannot be found in the country. His home is not a fancy Gothic country seat, but a commodious dwelling, without architectural pretensions, comprising all the comforts the most fastidious could desire. The kind "old lady" and the charming Miss "Mattie" soon came out to join the party and welcome me to their delightful home. What a retreat for a sportsman! I was my first thought, Tom had a fine bass, caught but a few minutes before, awaiting the servant to take it away to be cooked for our supper; while his bounds, glad to see him, were giving evidence of their desire to have a run, by giving voice to those delicious notes which are only fitted for the ears of the fox or deer hunter. Guns stood in the hall-way, game-bags and hunting-horns, all showed by the superior cleanliness and good order in which they were arranged, that an adept was their owner.

We ate a most hearty meal: fried chicken, clabber, luscious peaches and cream—the latter so rich and thick that no one questioned the dear little "Jersey" which gave it. I could have

resigned all desire for any other scenes, and dwell there complacently with the charming surroundings, if such had been my luck; but unfortunately the abominable "business" compelled me to turn my back on what would have been my greatest pleasure. I could neither follow the bounds that night, as there was no moon to light our path, nor take a turn at the fine bass in the morning, because 9 A. M. was the hour I was to be at the desk. I was glad to hear from the "Squire" that the forked mouth sucker was really in the South Harpeth, and in great quantities; also all varieties of fish were rapidly increasing since the protective laws had been enforced. The game laws had effected the same results. Pheasants (grouse), which had become almost extinct, are coming back in great numbers. As for quail, the prospects for next winter are most brilliant. Sitting on the porch, smoking and talking with my good friends, I was constantly interrupted by the melodious song of "Bob White." The "Squire" has a number of pigeons which prefer roosting in the fine beech trees in his yard to the houses built for them. This I found curious, as I had never seen the like before. In the fall I intend returning to the "Squire's" and have a fair trial at the many kinds of game and fish in the country. A more lively spot for sportsman than near his place I never saw. Trees which keep their foliage all the year to camp under, superb springs of icy cold water at your feet, fire-wood abundant—and all in the hearing of farmers who have plenty, live in style, and would gladly furnish milk, butter, chickens and vegetables for the mere asking. Reluctantly at 4 A. M. I bade farewell to my friends. J. D. H. Nashville, Tenn.

### THE DOMINION RIVER FISHERIES.

Concerning the leasing of salmon rivers the *Mirimichi Advertiser* says: "The Riparian Rights Case, has been decided by Justice Gwynne in the Exchequer Court, at Ottawa, against the Government. He affirms that the Department of Marine and Fisheries has not the right to lease the fluvial rivers of this Province to any person to fish exclusively in, although it may regulate fisheries such rivers. His Lordship decides that the owners of the soil have the right of fishing in inland rivers above the ebb and flow of the tide, but the public have the right of fishing in the sea and on the bays and arms of the sea. The Crown Grants of land adjacent to rivers above the ebb and flow of the tide carry the right of fishing in the river, unless specially excepted and, even then it would not be given to the public. "This decision is in accordance with equity and against the assumptions set up by the present Canadian Minister of Fisheries and persisted in by his successors. An appeal will, it is said, be carried to the Supreme Court of Canada."

**AMERICAN SARDINES.**—There are several fishes put up as sardines in Maine and New Jersey, but in most cases a foreign label is put on the cans when in fact they are good enough to be sold on the open market. The "sprat" *Clupea sprattus* is largely used in Europe as a "sardine," as is also the herring, or rather the latter portion of it cut off at the dorsal fin. In this country the menhaden or moss bunker is the principal fish so put up, and they are excellent if properly prepared, the main thing being to get a fish with moderately soft bones which are further softened by steaming and then putting them up in good oil. In Maine the business is brisk at present; there are at present eight sardine factories in Eastport, running full blast, night and day, turning out weekly about 3,500 cases ready for market, and giving employment to about 600 hands, male and female. The pay-roll of these factories foot up to some \$6,000 per week. During the past two months there has been an abundant supply of fish, and the prospects are excellent for a good fall's work. In a few weeks there will be three more factories added to the number, which will give employment to about 150 more hands.

**BIG BASS FROM GREENWOOD LAKE.**—*New York, Oct. 11.*—At Greenwood lake, N. J., Friday morning, under pilotage of Sam Harrison, Chas. Myers and Chas. Dennis, Jr., took nine Oswego or big mouth bass weighing twenty-seven and a half (27½) pounds; weights of the three largest 6, 6 and 3½; measurement of first, length 21 in., girth 10 in., mouth opening in lip to lip 4½ in. On Saturday morning same party caught 11 bass weighing 25 pounds; weights of three largest, 4½, 4, 3½, the second fish having though his lip a hook lost the previous day by Garrison. Yours, Old Subscriber.

**BASS FISHING ON ST. CLAIR FLATS.**—*Detroit, Oct. 11.*—I had the pleasure last week of a trip to St. Clair Flats with Mr. E. J. Fairfield, of Ohio, and Mr. C. C. Pickering, of the same State, both of whom are enthusiastic fishermen. We had time for only two days' sport, and had the ill-luck to have even that short time "bit-off" at 10 o'clock A. M. of the second day by the loss of our minnow bucket, by the breakage of its fastening to the boat. We, however, got some 24 or 25 bass, such as does one good to look at, not to speak of the delight of catching. Our string must have weighed 90 pounds. Some splendid strings of bass are now being taken there. The water is cold and clear, and every bass caught fits sufficient to satisfy the fellow at the other end of the line.

Host Slocum tells us the Star Island Hotel will be enlarged for next season by the addition of some forty or fifty rooms, and in many ways improved so as to add to the comfort and pleasure of his guests. In fact they are even now at work with a large dredging machine on one side of the hotel. With these additional hotel facilities and the marked improvement in the fishing at the flats another season must make those waters still more famous. Uno.

**FISHING IN THE GUNPOWDER.**—We were on our way to what is called the "stone pile" to fish for white perch, and were under the guidance of Mr. Wm. Eccleston (famously called "Old Red Head") the veteran ducker, fisherman and decoy maker of the Gunpowder and Carroll's Island region. He soon put us on the stone pile, and as soon as we got our rods together and our lines rigged, our sport commenced. It was half-past ten when we began fishing, and stopped at four. During that time we caught fish constantly. Large white perch, rock taylor and spots. The writer was unfortunate enough to loose the screw that held the handle of his reel on, and just after doing so struck a large rock fish. Of course he could do nothing but hold on to his rod, and the strain was so great that the hook tore out of his mouth; the spring of the pole was so strong that the line flew up into the air, and on the upper hook there was a small yellow fish. The jerk was so violent that it tore the hook out of his mouth also. We were becalmed going home and had to row six

miles, which made us so late that we had not time to count or weigh our fish, which would have more than filled a bushel basket. E. A. R.

October 4, 1880.

**BLADDERS OF FISHES.**—In a recent note to the Paris Academy, Prof. Marangoni gives the results he has arrived at in a study of the swimming bladder. He states first, that it is the organ which regulates the migration of fishes, those fishes that are without it not migrating from bottoms of little depth, where they find tepid water; while fishes which have a bladder are such as live in deep, cold water, and migrate to deposit their ova in warmer water near the surface. Next, fishes do not rise like the Cartesian diver (in the well-known experiment), and they have to counteract the influence of their swimming bladder with their fins. If some small dead and living fishes be put in a vessel three-quarters full of water and the air be compressed or rarefied, one fluds in the former case the dead fish descend, while the living ones rise, head in advance, to the surface. Rarefying has the opposite effect. Fishes have reason to fear the passive influences due to hydrostatic pressure when fished from a great depth their bladder is often found to be ruptured. Thirdly, the swimming bladder produces in fishes a two-fold instability—one of level, the other of position. A fish, having once adapted its bladder to live at a certain depth, may, through the slightest variation of pressure, be either forced downward or upward, and thus they are in unstable equilibrium as to level. As to position, the bladder being in the ventral region, the centre of gravity is above the centre of pressure, so that fishes are always threatened with inversion; and, indeed, they take the inverted position when dead or dying. This double instability forces fishes to a continual gymnastic movement, and doubtless helps to render them strong and agile. The most agile of terrestrial animals are also those which have least stability.

**FISH CULTURE IN TENNESSEE.**—A correspondent writes us that the protective laws of the State are working well wherever they have been enforced, and the fish have increased. Fish Commissioner George P. Akers has planted 500 German carp, received from Prof. Baird, U. S. Fish Commissioner, in ponds near Nashville, and they are now of 2½ lbs. weight. The State has no appropriation for this purpose, and therefore but little can be done in the way of replenishing depleted waters. It is much to be hoped that the next Legislature will have wisdom enough to remedy this, and not by a spirit of false economy allow the people to be deprived of this great food resource. Rivers, streams and ponds should no more be allowed to lie unproductive than the land, and Tennessee should not allow this source of wealth—for certainly it is wealth—to remain in a state of neglect.

**BLACK BASS IN NEW JERSEY.**—A good chance to get small black bass for stocking waters in New Jersey is thus shown by the *Newark Sunday Call*: Small black bass are now being caught in large numbers in the seventeen-mile level of the canal, and it is evident that the water has in some manner become plentifully stocked with them since spring. It is a pity that this is the case, for the annual drawing off of the level will result in their destruction before they have attained respectable size. By watching for the time when the canal is emptied a fine supply can be obtained for stocking private ponds.

## Fish Culture

### LIST OF FISH COMMISSIONERS.

THE following is a list of the Commissioners of Fish and Fisheries of the United States and Canada, as far as it has been possible to obtain them. It has been corrected to October 1 by correspondence, and there are some changes from that of last year. Arkansas has a commission of three a few years ago, but never had an appropriation and did no work. One member died, one resigned, and last year, after the list was made up, a letter came from Mr. N. B. Pearce, of Osage Mills, saying that he supposed that he was still a Commissioner although there was nothing to do, or if there was anything to be done a lack of the useful prevented it. This year he has failed to respond, but Texas comes into line instead. The corrected list now stands:

CANADA.		Ottawa, Ontario.	
W. F. Whitcher,		Newcastle, "	
S. Wilnot, Supt. of Fisheries,			
NEW BRUNSWICK.		St. John.	
W. H. Venning, Inspector of Fisheries,			
NOVA SCOTIA.		Amherst.	
W. H. Rogers, Inspector of Fisheries,			
PRINCE EDWARD ISLAND.		Alberton.	
J. H. Duvay, Inspector of Fisheries,			
BRITISH COLUMBIA.		Victoria.	
Alex. C. Anderson, Inspector of Fisheries,			
UNITED STATES.		Washington, D. C.	
Prof. Spencer F. Baird,			
ALABAMA.			
This State had a Commission last year, but we have been unable to get a reply to letters addressed to them.			
CALIFORNIA.		San Francisco.	
S. R. Throckmorton,			
B. B. Redding,		Niles, Alameda Co.	
J. D. Farwell,			
COLORADO.		Brookvale.	
W. E. Sisly,			
CONNECTICUT.		Hartford.	
W. M. Hudson,		Middletown.	
Robert G. Pike,		Sherman.	
G. N. Woodruff,			
GEORGIA.		Atlanta.	
Thomas P. James,			
(Com. of Agriculture and ex-officio of fisheries.)			
ILLINOIS.		Chicago.	
N. K. Fairbank,		Quincy.	
S. P. Bartlett,			
(Mr. J. Smith Briggs, of Kankakee, was on the board, but his term has expired and no appointment has been made to date.)			
IOWA.		Anamosa.	
B. F. Shaw,			
KANSAS.		Ellsworth.	
D. B. Long,			
KENTUCKY.		Midway.	
Hon. John A. Steele,		Mt. Sterling.	
Dr. Wm. Van Antwerp,		Cattletown.	
A. H. Goble,		Munfordville.	
Hon. C. J. Walton,		Bowling Green.	
Dr. S. W. Coombs,		Madisonville.	
John B. Walker,		Louisville.	
Wm. Griffith, President,		Danville.	
Dr. S. W. Price,		Princeton.	
P. H. Darby,		Independence, Kenton Co.	
Hon. J. M. Chambers,			
MAINE.		Bangor.	
E. M. Stilwell,		Portland.	
Everett Smith,			
(Commissioners of Fisheries and Game.)			
MARYLAND.		Baltimore.	
T. B. Ferguson,			
(Address 1,327 M. St. Washington, D. C.)			
Thomas Hughlett,		Easton.	
MASSACHUSETTS.		Brookline.	
Theodore Lyman,		Winchester.	
E. A. Brackett,		Boston.	
Asa French,			
MICHIGAN.		Richland.	
Eli R. Miller,		Detroit.	
A. J. Kellogg,		Grand Rapids.	
Dr. J. C. Parker,			
MINNESOTA.		La Crescent.	
Daniel Cameron,		Red Wing.	
Wm. W. Sweeney, M. D.,		St. Paul.	
R. Ormby Sweeney, Chm.,			
MISSOURI.		St. Joseph.	
Hon. Silas Woodson, Chm.,		Jefferson City.	
Hon. H. Clay Ewing,		Lexington.	
John Reid,			
NEBRASKA.		Plattsmouth.	
R. R. Livingston,		Red Cloud.	
H. S. Kaley,		Promont.	
W. L. May,		Carson City.	
NEVADA.			
H. G. Parker,			
NEW HAMPSHIRE.		Manchester.	
Sam'l Webber,		South Milton.	
Luther Hayes,		Plymouth.	
Albina H. Powers,			
NEW JERSEY.		Woodbury.	
Dr. B. P. Howell,		Trenton.	
E. J. Anderson,		Newton.	
Theo. Morford,			
NEW YORK.		New York.	
Hon. R. B. Roosevelt, 76 Chambers st.,		Rochester.	
Edward M. Smith,		Oneida Co.	
Richard U. Sherman,		Brooklyn.	
Eugene G. Blackford, 809 Bedford ave.,			
NORTH CAROLINA.		Raleigh.	
P. M. Wilson (acting Com.),			
OHIO.		Coshocton.	
J. C. Fisher, President,		Toledo.	
R. Cummings, Treasurer,		Cincinnati.	
L. A. Harris, Secretary,			
PENNSYLVANIA.		Easton.	
H. J. Reeder,		Holidaysburg.	
B. L. Hewit,		Marietta.	
James Duffy,		Sellinggrove.	
John Hummel,		Pittsburg.	
Robert Dalzell,		Wilkes-Barre.	
G. M. Miller,			
RHODE ISLAND.		Providence.	
Newton Dexter,		Rockland.	
John H. Barden,		Providence.	
Alfred A. Reed,			
SOUTH CAROLINA.		Columbia.	
A. P. Butler,			
(Com. of Agriculture and ex-officio Com. of Fisheries.)			
TENNESSEE.		Memphis.	
W. W. McDowell,		Nashville.	
Geo. F. Akers,		Knoxville.	
Hon. W. T. Turley,			
TEXAS.		Austin.

### THE ANISE-BAG HUNT.

All glory to man and all glory to woman,  
Who rode in this hunt; they have cause to be vain;  
They've shown quite enough of the nature called human,  
But little enough of the nature humane.  
Most glory to him, may his mem'ry be scented—  
Perchance 'twas a deer clerk, some pestle-pot run,—  
Who engulged his brain till at last he invented  
This glorious sport of the anise-bag hunt.

# Game Bag and Gun.

## GAME IN SEASON IN OCTOBER.

**XOPEE.** *Alce americana.*  
*Chlorio, Ranget caribou.*  
*Elk or wapiti, Cervus canadensis.*  
*Red or Virginia deer, C. virginianus.*  
*Squirrels.*—Red, black and gray.  
*Red-breasted nuthatch.*  
*Red or rice bird, Dolichonyx oryzivorus.*  
*Partridge.*  
*Wild Turkey, Meleagris gallopavo.*  
*Pinnated grouse or prairie chicken, Caprimulgus cupido.*  
*Ruffed grouse or pheasant, Bonaparte's.*  
*Quail or partridge, Oryzopsis virginianus.*  
*Sparrow, Zonotrichia querula.*  
*Sp. rail, Porzana carolinensis.*

This enumeration is general, and is in conflict with many of the State laws generally, including various species of plover, sandpiper, snipe, curlew, greater and lesser, snipe, plovers, avocets, coming under the variety *Limicola*, or shore birds. Many States permit prairie fowl (pinnated grouse) shooting after Aug. 15.

(Head taken from the Long Island Sportsmen's Association.)  
**THE NEW YORK GAME LAW.**

### ANALYSIS OF ITS PROVISIONS.

BROOKLYN, October 8, 1890.

**To the Long Island Sportsmen's Association:**  
 GENTLEMEN:—The time is approaching when, as the wardens of the interests of the "New York State Association for the Protection of Fish and Game," we shall be required to account for our stewardship. Under our auspices much can and should be accomplished. Carpers have criticized the former action of that Association and dubbed it a "club of pigeon-shooters." It has been asserted, with apparent justification, that its prime objects have been lost sight of in the mercenary contests for prizes at the traps.

The management of each convention is within the control of the entertaining organization. What can and ought we to do to remove the odium and establish the credit of our State Association? The occasion is afforded us to demonstrate our sincerity and unity our local societies in a work of common benefit to the large body of sportsmen throughout the state. No subject is of more immediate importance than the existing legislation for the preservation of animals, birds and fish of the kinds commonly termed "game."

During the interval since our last meeting I have collated the recent statutes upon that subject and, so far as practicable, have analyzed their existing provisions to afford you an intelligible basis for examination and recommendation of amendments.

The special laws for shell-fish, regulating the taking of clams and oysters and the sale of lobsters, seem hardly within our purview: nor have I included the laws establishing fishways, the construction of dams over rivers, those relating to Commissioners of Fisheries or the incorporation of companies for the protection or propagation of fish and game, those providing for election of bay constables, those conferring powers on supervisors to legislate, nor the laws regulating shad fishing, except as these subjects are specifically referred to in the laws of 1879 and 1880.

The general laws are Chapter 534 of the Laws of 1879 and Chapters 531, 534 and 591 of the Laws of 1880. They are prohibitory in their nature, and propose to preserve game by punishing those who kill, sell or have it in possession during certain specified periods. They do not provide for propagation in any other manner. While general, the exceptions to their operation in localities are many.

Without strictly following the order or technical verbiage of the acts, the provisions can be better studied by dividing the subjects into:

- |                                |                             |
|--------------------------------|-----------------------------|
| 1st. Animals.                  | 5th. Civil remedy.          |
| 2d. Birds.                     | 6th. Criminal proceedings.  |
| 3d. Fish.                      | 7th. Special game officers. |
| 4th. Miscellaneous provisions. | 8th. Local legislators.     |

In nearly all the prohibitions as to birds and fish the language used is as follows: "No person shall kill or expose for sale or have in his or her possession after the same has been killed." With the exception of the amendments introduced by the Laws of 1880, the violation of the prohibited acts is in terms made a misdemeanor, and a pecuniary penalty is added. In the case of shooting certain birds specified in Chapter 534, Laws 1880, the provision making it a misdemeanor is omitted. These are the "eagle, woodpecker, night hawk, yellowbird, wren, martin, oriole or any song bird" and the "robin, meadow lark or starling." (Chap. 534, L. 1880, §§ 2 and 3, amending §§ 12 and 13, Chap. 534, L. 1879.)

The animals which by these laws are considered game are "wild deer, moose, hare or rabbit, squirrels, black or gray." The water or bay birds so declared game are "wild duck, goose or brant."

The upland birds specified are "quail, woodcock, ruffed grouse, commonly called partridge, pinnated grouse, commonly called prairie chicken, spruce grouse, commonly called Canada partridge."

The protectors are "eagle, woodpecker, night hawk, yellowbird, wren, martin, oriole, song birds, robin, meadow lark and starling."

The specified fish are "speckled trout, salmon trout, lake trout, California trout, black bass, striped bass, Oswego bass, muscalonge and salmon." But there is no close season for salmon.

### CLOSE SEASONS.

#### ANIMALS.

**Wild Deer.**—From November 30 to August 1, and for chasing with dogs except from August 15 to November 1.

In St. Lawrence county dogs cannot be used at any time. In the counties of Suffolk and Queens wild deer not to be killed within five years after act of June 20, 1879. Fawn in spotted coat protected. Use of traps, spring guns and other devices for trapping or killing deer prohibited. Crusting and entering deer yards forbidden. Violation is made misdemeanor, with penalty of \$50 added, except in case of crusting or yarding if is \$100, and dogs unlawfully in pursuit may be killed by the owner of the deer. Violation is made misdemeanor, with penalty of \$50 added, except in case of crusting or yarding if is \$100, and dogs unlawfully in pursuit may be killed by the owner of the deer. Violation is made misdemeanor, with penalty of \$50 added, except in case of crusting or yarding if is \$100, and dogs unlawfully in pursuit may be killed by the owner of the deer.

**Hare or Rabbit.**—From February 1 to November 1.

Hunting with ferrets prohibited. Owners or occupants of

nurseries or orchards may trap or hunt with ferrets within the limits of such nurseries or orchards or in forest or field adjoining. Violation is misdemeanor and added penalty of \$25.

**Squirrels, Black or Gray.**—From February 1 to August 1. Violation is misdemeanor, with added penalty of \$25.

#### BIRDS.

**Wild Duck, Goose or Brant.**—From May 1 to September 1. On Long Island from May 1 to October 1.

Violation is misdemeanor, with added penalty \$25. Killing between sunset and daylight, pursuit or firing at with aid of lantern, being found on the water with a gun and lantern in act of attempting to pursue, fire at or kill between sunset and sunrise, made misdemeanors, with added penalty \$50.

Killing with swivel or punt gun, or with any gun other than such as are habitually raised at arm's length and fired from the shoulder: use of net or device or instrument other than such gun, made misdemeanor, with added penalty \$50.

Use of floating battery, machine or device whereby gunner is concealed, or shooting therefrom, use of decoy or construction of bow house at distance from shore more than twenty rods, made misdemeanor, with added penalty \$50. Except in Great South Bay, west of Smith's Point. Also except in Peconic Bay, Shinnecock Bay, Lake Ontario, St. Lawrence River, Hudson River below Albany.

Sailing for them, or shooting from sailing or steam vessel, or structure attached to same, made misdemeanor, with added penalty of \$10. Except in Long Island Sound, Lake Ontario and Hudson River below Nyack.

**Quail.**—From January 1 to November 1. In counties of Montgomery, Schenectady, Saratoga and Albany within two years after act of June 25, 1880, prohibited. Violation is misdemeanor and penalty is added \$25. Sale or possession between January 1 and February 1, may be excused by proof of killing within lawful period. Netting, trapping and snaring prohibited and made misdemeanor, with \$10 penalty. Nets, etc., to be destroyed when found set.

**Woodcock.**—From January 1 to August 1. In counties of Oneida and Herkimer, January 1 to September 1. Violation made misdemeanor, with added penalty \$25. Sale or possession between January 1 and February 1 excused on proof of killing within lawful period.

**Ruffed Grouse, or Partridge, and Pinnated Grouse, or Prairie Chicken.**—From January 1 to September 1. Violation made misdemeanor, with penalty \$25. Netting, trapping or snaring, and setting net, trap or snare for them, or for grouse grouse or Canada partridge, made misdemeanor, with penalty added of \$10. Destruction of nets, traps and snares authorized when found set. [Note.—No provision against shooting Canada partridge at any time exists.] Sale or possession of ruffed or pinnated grouse from January 1 to February 1 excused upon proof of killing within lawful period.

**Eagle, Woodpecker, Night Hawk, Yellow Bird, Wren, Martin, Oriole and Song Birds.**—Killing prohibited at all times, except for studying habits or history, or to be set up. Penalty \$5.

**Robin, Meadow Lark, Starling.**—From January 1 to October 1. Penalty \$5. Except for studying habits or history, or to be set up, and except that robins, in act of destroying fruit or grapes, may be killed by person on his own premises.

#### FISH.

**Speckled Trout.**—From September 1 to April 1.

Catching by any device but angling and use of net, seine or set line, or possession of same on shores, prohibited, and nets, etc., declared contraband and destruction authorized. Violation made misdemeanor, with \$25 penalty added. Except in waters wholly private, by owner's permission, the net or device may be used.

**Salmon Trout or Lake Trout.**—In the inland lakes from October 1 to May 1. In Lake George from October 1 to April 1. Violation made misdemeanor, with penalty \$10 added.

**California Trout.**—From May 15 to September 1. Violation made misdemeanor, besides penalty \$25.

**Black Bass, Oswego Bass and Muscalonge.**—From January 1 to June 1. Unless caught alive for artificial propagation or the stocking other waters.

In the St. Lawrence, Clyde, Seneca and Oswego rivers, Lake Erie, Lake Ontario, Lake Conesus and Niagara River above Niagara Falls, on the American side, protected from January 1 to May 20.

Black Bass in Lake Mahopac and Dutchess County, in Schoon lake or river, and Paradox lake in the counties of Essex or Warren, protected from January 1 to July 1. In Lake George from January 1 to July 20.

Black or striped bass, under one-half pound weight, not to be caught at any time. Violation made misdemeanor, with penalty of \$10 added.

### SPECIAL PROVISIONS RESPECTING FISH.

Shutting or drawing off waters to catch fish, made misdemeanor, with added penalty of \$25.

Tonawanda Creek, between Monilton's dam in Genesee County and Colton's dam in Wyoming County, not to be fished within five years after act of June 20, 1879. Violation a misdemeanor and \$25 penalty.

In Lake Ontario, on the American side, for three miles from the mouth of the Niagara River: in Onondago, Oneida, Seneca and Cross lakes and their outlets and tributaries, and Niagara River and American waters above Niagara Falls, no fish except minnows to be caught by any device but hook and line. Violation a misdemeanor, and also a penalty of \$100.

Fish not to be caught (excepting minnows, bullheads, eels, suckers and catfish) by any device but hook and line in the other fresh waters and creeks, and violation made misdemeanor with penalty of \$25.

**Exempted localities where nets, etc., may be used:** Hudson River, below the dam at Troy; Black Lake, in St. Lawrence County; St. Regis River, Grass River and Rackett River, below the line of the Ogdensburg and Lake Champlain Railroad; Lake Ontario (excluding Great Sodus Bay, Port Bay, East Bay in Wayne County, Henderson Harbor or Bay in Jefferson County); Lake Champlain, from October 1 to November 15; Lake Ontario, with its bays and inlets within the County of Jefferson; and in that part of Oswego County lying between its Jefferson County line and the westerly line of the town of Mexico, and within one-half mile of the outlet or mouth of Salmon River, excluding "the shoals adjacent to Henderson Bay on the lake side, from the main shore to and including Smoke Island, except during the months of November and December." In Walkill River, within Ulster County, householders, during the months of March and April, October and November, may fish for suckers and eels with single line of not less than two foot mesh.

**Size of mesh to be not less than two and one-half inches except in the above exempted localities.** In waters over which Richmond County has civil jurisdiction meshes to be not less

than two inches; in Long Island bays, salt waters, estuaries and rivers, to be not less than two and one-half inches, excepting for menhaden and in ponds where permitted by law; in Coney Island Creek to the mouth thereof, extending out into Gravesend Bay, one-half mile each way, to be four inches square, except hoop nets for eel and flounder fishing between Oct 15 and April 1; in Great South Bay pound or trap net prohibited, except that portion within jurisdiction of the town of Islip and not in Brookhaven and Smith patents; in Lakes Erie and Ontario, to be not less than four and one-half inches; in Lake Erie, no pound or trap net to be used; in Hudson River, below dam at Troy, not less than two and one-half inches, except for bait fish; in Hudson River, between the upper dock at the village of Sing Sing and Croton landing in the town of Cortland, and in the waters between those points, drawing seine prohibited; in Croton River, between June 1 and October 1, drawing seine prohibited. Violation made misdemeanor besides added penalty of \$50, and unlawful nets declared contraband and their destruction authorized.

**Possession of snares, nets, stake-poles and unlawful devices** (during the close season) on the shores of lake or waters inhabited by salmon, salmon trout, lake trout, black or Oswego bass or muscalonge, without the permission of the Commissioners of Fisheries, made misdemeanor, with penalty of \$25 added, excepting Hudson River south of Troy dam, Lake Ontario and Walkill River, in Ulster County.

**Nets, pounds or device, by which fish may be captured or taken, set, put, floated, had or maintained in any of the State waters in violation of any law, declared a public nuisance, to be abated by any citizen of the State.** The game protectors are required to seize and remove them. Expenses of seizure, removal and storage a county charge, to be repaid by sale by sheriff.

**Refuse stuff, Coal Tar.**—Refuse from gas-houses, sawdust, lime or other deleterious substances, not to be deposited or caused to flow into any of the "rivers, lakes, ponds, streams, or any of the bays or inlets adjoining the Atlantic Ocean." Penalty, misdemeanor, with \$50 added. Not applicable to streams constituting motive power for manufactories where necessary to run the refuse into the stream.

**Fishways and State Fishery.**—Commissioners of Fisheries to maintain sign-boards at a distance of eighty rods from fishways constructed or established by State prohibiting fishing. Boards to be on both sides of the stream, above and below. Fishing within such boarded distance, or destruction or injury of sign-boards, made misdemeanor, besides added penalty of \$25.

### MISCELLANEOUS PROVISIONS.

**Destroying or Robbing Nests of Wild Birds.**—Prohibited, save when necessary to protect dwelling houses or prevent their defacement. Excepting crows, blackbirds, hawks and owls; and violation is misdemeanor, and penalty added is \$5.

**Sign-boards to be maintained by owner or occupant of land, size one foot square, upon every 50 acres upon the lot lines, or on shares of water, in at least two conspicuous places. Name of owner or occupant to be appended to notice forbidding trespassing.**

**Trespassers on such lands for purposes of shooting or hunting or taking fish from private ponds or private streams, not stocked in whole or in part by the State, liable to exemplary damages not exceeding \$25, besides actual damages. Injuring or destroying sign-board made misdemeanor, besides penalty added of \$25.**

**Private Parks.**—Dedication of lands and water for private park by owner or lessee for propagation or protection of fish, birds or game authorized. **Proceedings.**—Notice describing the property, and stating the purpose, to be published in county paper where property is, of general circulation, once a week for three months. Notices or sign-boards during such publication, or within six months after final publication, to be posted or put up warning off trespassers. Notices or boards to be not less than one foot square, and not more than forty rods apart along entire boundary, if park be all land. If both land and water, then in conspicuous places on the shore, notice for every 100 acres. If pond only, then in at least four conspicuous places on the shore. If the park be inclosed by fence of reasonable capacity for protection, notices to be on fences not over half a mile apart. After property is dedicated, all fish, birds and game to belong to the owners or lessees.

Catching, taking or killing fish, birds or game therefrom; putting deleterious substances or piscivorous fish; letting off the waters with intent to fish or destroy fish or eggs placed in snare, evaders, devices, destruction of sign or notice posted; placing object against or near fence to aid animals to get in or escape therefrom; entering with implements for catching, taking or killing fish, birds or game therein, made misdemeanor, and guilty person also liable to owner or lessee to exemplary damages not exceeding \$25, besides actual damages.

**Wolves and Panthers.**—Bounty for grown wolf, \$30; bounty for pup wolf, \$15; bounty for panther, \$20, if killed in State. Proof—Satisfactory affidavits and skull and skin to be presented to supervisor and a justice of the peace of town in which killed, they to burn the skull and brand the skin.

**Sunday shooting, hunting, trapping or caging birds or wild beasts, or possession in open air for such purpose of the implements therefor, made misdemeanor, with added penalty of \$25.**

### CIVIL REMEDY.

**Penalties, with cost of suit, may be recovered by any person in his own name or by any society in its name. The society to give security for costs.**

District attorney to bring actions in name of The People upon reliable information or when requested by the game protectors appointed by the Governor. Person giving information entitled to one-half percent of balance due to County Treasurer. Game and fish protectors appointed by the Governor empowered to bring action in the name of The People.

**Courts Having Jurisdiction.**—Justice of the Peace in county where offense committed or adjoining county to amount of usual jurisdiction. In New York city: District Courts and Marine Court; all Courts of Record in the State. In Kings County: County Court and City Court of Brooklyn in actions by game constables.

**Costs and Disbursements.**—Recovery under \$50 in Court of Record, including Kings County Court and City Court of Brooklyn. Cost to equal recovery in amount.

In action by The People, commenced by District Attorney at request of the game protectors, if the plaintiff succeeds, to be at rates fixed by § 307, Code of Procedure (old Code), besides witnesses and other fees and disbursements, without regard to amount of recovery. District attorney may discontinue action without costs.

**Expenses in such actions to be advanced by County Treasurer on requisition of District Attorney. On recovery, expenses to be paid back with all fines to County Treasurer, but**

costs to go to District Attorney. County Treasurer to pay surplus over expenses into State Treasury by Sept. 30, to be part of the general fund.

**Judgments enforced.**—By execution against the person. Imprisonment to be not less than five days, or if the judgment and interest be more than \$5, then at the rate of one day for \$1. Several penalties may be in one suit, but only one imprisonment on the judgment. Imprisonment does not satisfy judgment.

#### CRIMINAL PROCEEDINGS.

**Unconvicted Persons.**—Punished by fine not less than \$5 nor more than at the rate of \$1 for every dollar of penalty, when same exceeds \$5.

Or by imprisonment in county jail or penitentiary for not less than five days nor more than one day for every dollar. Or by both fine and imprisonment.

**Courts having Jurisdiction.**—In towns and villages—Courts of Special Sessions. In cities—the courts having jurisdiction to try misdemeanors.

**Fines** to be paid within ten days by Court receiving them to the Treasurer of the county where offense committed; except in New York city, where the same are to be kept as a fund to enforce the game laws as the County Supervisors or the New York City Aldermen may direct, for special detectives or rewards for detection and arrests.

**Arrests** without warrant required of sheriff, under sheriff, deputy sheriff, police officer, constable, game constable and any constable when finding person violating game law, and to bring him before the nearest magistrate having jurisdiction.

**Neglect to enforce law** by officer or magistrate made a misdemeanor when proper information or complaint is furnished to him.

**Warrant of arrest** to be issued by Justice of Marine or District Court in New York city, or by Justice of the Peace, Police or other magistrate on receiving security for costs and affidavit of violation against non resident temporarily within jurisdiction, or person whose name and residence are unknown, to be committed or held to bail to answer charge.

**Search warrant** to be issued by same magistrate, authorizing search of house, market, boat, crate, car or other building, and to break open any apartment, chest, box, locker, crate or basket and to examine contents, provided proof or probable cause to believe in concealment of game or fish, taken during close season, be furnished, and also security approved by magistrate for damages sustained by defendant, if he be found not to have violated the law.

#### SPECIAL GAME OFFICERS.

**Game Constables.**—Board of Supervisors at a regular meeting, by majority vote of members, may authorize election by each town or city of one or more game constables, they to be chosen at town meeting for term of one year, to take oath of office and have power to serve process under game laws, like town constables in civil cases.

**In Kings County.**—To be appointed by Board of Supervisors at a regular meeting. Term to expire December 31 after appointment, upon successor qualifying.

**Warrants of arrest** in actions by Kings County game constables, as in cases provided for in Section 19 of Code of Procedure (old code), except no undertaking is required from plaintiff. Sheriff of Kings not to exceed deposit or pay from plaintiff on such arrest.

**Compensation of Game Constable** to be same as for services by town constables, and also one-half the penalties recovered by him.

**Neglect to prosecute** by him, on proper information, punished by forfeiting \$25.

**Failure to receive by him.**—The costs to be paid to defendant by the county.

**Game and Fish Protectors.**—The Governor authorized to appoint eight to enforce the game laws. Actions by them to be in the name of the people. Terms of office to be three years from date of appointment. Vacancies filled by Governor. May arrest without warrant any person violating the game laws. Person to be taken before any magistrate having jurisdiction, who shall proceed without delay to try, determine and enforce the law. Traveling expenses not exceed, in \$250 in any year for each, allowed, besides salary of \$500, payable by State Treasurer.

**The protectors not holding the office** are (see FOREST AND STREAM, Sept. 30, 1880): S. V. R. Bryant, 59 Division street, Albany, N. Y.; John Jessup, Hudson, Columbia County, N. Y.; Sylvester J. Palmer, Indian Lake, Hamilton County; John Liberty, Elizabethtown, Essex County; Daniel B. Horton, Ithaca, Tompkins County; G. M. Schwartz, Rochester, Monroe County; William E. Dodge, Prospect, Oneida County; John J. Collett, Cobleskill, Schoharie County.

#### LOCAL LEGISLATORS.

**Boards of Supervisors** at annual meeting may make any regulations or ordinances protecting other birds, fish or game.

Also for further protection of those above named, except wild deer, and may prohibit hunting or fishing in particular localities, or waters within their counties for limited periods and during certain seasons. They may prescribe punishments and penalties and adopt measures to enforce and collect same. Such regulations and ordinances to be published in the county papers in which session laws are published. Certified copy to be filed with County Clerk.

**Note.**—The annual meeting is in November in each year. They may raise by tax, same as other county taxes, an amount not exceeding \$1,000, in any year, to aid the enforcement of the game laws.

Respectfully submitted,

ABEL CROOK.

#### PHILADELPHIA LETTER.

WE are having an unusual quantity of running quail in the suburbs of Philadelphia. At Germantown, Frankford and West Philadelphia, numerous coveys have been seen in the yards of the wealthy residents. These birds were not bred here but have migrated from sections where broods have been reared than can be supported through the winter. It is always the case when the quail has enjoyed a favorable breeding season, as the past spring and summer have proven; instinct prompts them to distribute themselves, and search a country where fewer birds have been bred. The average number of berries to an ordinary farm of seventy-five or one hundred acres is seldom more than three or four, unless a great quantity of grain has been planted, which would then furnish the necessary stubble requisite for feeding grounds and prevent too great a migration.

Our season for quail shooting opens next week, and still the foliage remains green. Poor prospect for successful covey work, is it not? November 1 should be the commencement of the open season; by that time the trees would be devoid of a part of their leaves and the growth of the birds as-

sured. A few woodcock are coming in; these from the northern and more elevated sections whither they have winged their flight to pass their moult, and to remain until driven back again by the early cold snaps of the mountain regions. Here, while on the subject of the migration of birds, let me mention a discovery your correspondent made regarding the flight of the sora rail to our river flats this season. Shooting for rail began Sept. 1. Few birds were at first shot, and only those that had been hatched on our marshes; the tides during the beginning of the month furnishing enough water to afford fine sport had a great quantity of rail been present. The cause for this scarcity was evident—the flight had not come on.

It was about the 8th to the 10th of the month, I think, as your correspondent was making every effort to go to sleep, having retired about eleven o'clock, innumerable rails were heard passing overhead, and continued so for over an hour. The "crack creek, crack keet," the sora was plainly distinguishable. Myriads must have arrived on our shores that night. Curious to know the result of this flight I made inquiry the following evening and learned that every boat that had gone on the river reported from fifty to seventy-five rail, each "poor little birds in poor condition," evidently owing to their late migration.

About the latter part of August, a similar flight of grass plovers was noted by the writer as he sat in his late one evening, but inquiry was not made as to the shooting which followed. On both occasions the night was a drizzly or hazy one, and I have always noticed birds of all kind, choose such seasons for their migrations, whether it be by day or night.

It may be of interest to your readers to know that Mr. J. Warner Kinsey, of Barnegat, has associated himself with a number of prominent Philadelphia and Camden gentlemen, and the company are about erecting a commodious hotel on the two-mile beach property near the inlet. The building will be large enough to accommodate three or four hundred guests, and the names of such liberal gentlemen as Gen. Grubb, Allen Middleton, B. F. Archer, W. F. Bailly, F. Fenimore and a host of others guarantee the success of the enterprise. Barnegat Inlet, you know, has long been famous for its fishing, and its waters teem in proper season with the blue fish, bar, black fish, bass and weak fish. A proper legislation will be made for a continued protection of both fish and fowl at this point, the good effects of which have already been noticed in the past year.

One damaging kind of shooting followed by the baymen of the Jersey Coast should be stopped—that of night shooting for black duck as they come into the ponds to feed; watching it is called. It has the effect of making the fowl extremely wild, and many appear to look with suspicion on any great number of their own kind collected together, evidently suspecting their decoys.

The damaging results of the continued harassing of the canvas back and red head on their feeding grounds in the past is being felt by the sportsmen who visit Havre de Grace for the purpose of enjoying sink box, or battery shooting (murder it should be called). At one time these batteries were allowed to be moored on the flats every day. Latterly it is permitted only every other day. When it is known that the canvas back is about to appear, from November first until freezing weather, is taken up with one of these machines, surrounded by from two to three hundred deceptive decoys, it is a wonder that the canvas back is deserting his once favorite resort and gradually appearing in greater numbers on the lakes of our Western States? The use of batteries has long since been abolished by law in the Long Island and New Jersey waters, and it will not be long before such shooting will be given up in the sections first resorted to. We notice likewise that the general destruction of all birds of the forest is made from the south to north, westward of the Allegheny Mountains. It is so with the snipe, for instance. Who nowadays finds them east of the range in the great numbers we once did? Yet they appear in increased quantities where they are comparatively less persecuted. Do away with all spring shooting and a remedy will be found. HOME.

#### THE MINNESOTA DOG POISONING AGAIN.

GLENN ALLEN, Va., Oct. 14, 1880.

I reached southwest Minnesota on or about the 25th of August last, going direct to Fairmont, where I remained until the State Game laws were signed, having acquired a personal knowledge of the Windom problem or their dog-poisoning performances. What I learned in regard to that matter was derived partly from members of the St. Louis Kennel Club and partly from editorial articles in the Windom Reporter. The facts then alleged were substantially the same as those detailed in your columns by "Windom Pot Hunter"—that a number of birds dogs had been poisoned; that the poisoned dogs were owned by both resident and visiting sportsmen, but that the residents were the principal sufferers, and that the presumption arose that the visitors were the poisoners. This was the theory advanced at the time by the Windom Reporter, and I see it is now indorsed and re-affirmed by the "Windom Pot Hunter." To avoid the possibility of doing "Pot Hunter" an injustice in this matter, I will quote his own words: "Hence it will be seen that the Windom sportsmen are the principal losers of dogs, poisoned, as many believe, in the interest of non-residents. And again, I have no doubt the Memphis dog ate the meat that was laid for the Windom dog."

Now, we had a different theory on the subject. We were certain the villainy was not committed by Windom sportsmen, for sportsmen do not poison dogs. And the same reasoning applies to the visiting sportsmen, now supplemented, if such a thing were necessary, by the additional fact that the visitors did not arrive, according to "Pot Hunter's" own data, until three days after the word of death had been intimated. We believed then, as I believe now, that the deed was done by the pot hunters of Windom, and we deemed it our duty to throw out a word of warning until such time as the resident sportsmen and better class of citizens should be able to manage the vicious element which was then in manifest ascendancy. How near we were right in our conjecture is sufficiently attested by the limping logic and foolish innuendoes which glister through the bewildered sentences of their chosen champion and spokesman.

Windom is not the first Minnesota village that has been injured and dishonored by men of this stripe. Four years ago Winnebago was the seat of a nest of dog stealers, but the citizens and press of that town, instead of flippantly surmising that foreign sportsmen were the thieves, promptly took the matter in hand, ferreted the rascals out, and Winnebago speedily became one of the most popular hunting centres in the State.

Windom takes the other plan. The tone of a "Pot Hunter's"

communication is in the very spirit of the Reporter's editorials. Its animus cannot be mistaken. It extends a specious welcome while it breathes a latent menace. There are powder and shot for sale, and the wandering sportsman must be cajoled, but the birds, the birds of Windom, are a perquisite sacred to the elect.

What are "Pot Hunter's" grievances? He has two; and he dwells on them in pathetic cadence and with "damnable iteration." Twice he tells us that some visiting hunters did or tried to sell their birds; and three times, and with three separate and distinct groans, he informs us that "they brought their ammunition with them!"

With the former of these charges this controversy has nothing to do. Men who make commodity of their game are not sportsmen but pot-hunters, and they and "Windom Pot Hunter" had better settle the matter among themselves in family way. I will here state, as a matter of fact, that the Eastern and Southern men who take hunting trips to the West rarely, if ever, sell their game. During the past few years I have hunted with some scores of them, and not a single instance of the kind has fallen within my observation. They are guilty, however, of a much graver offense, viewed from the pot-hunter's standpoint. They give away their birds, and thus utterly ruin a trade which they would otherwise have profitably followed.

The other charge carries its own answer. People buy ammunition as they buy everything else—where they can get it most conveniently. Let Western towns keep a reasonable stock of a fair quality, and visiting sportsmen will soon find it out. No man on a second visit carries ammunition to Albert Lea or Fairmont.

Throwing this question into its briefest form, we find that a sportsman may go quarters at Windom by complying with certain demands, either expressed or implied:

1. He must use such ammunition as "Pot Hunter" chooses to furnish.
2. If he can kill birds with it he must not sell them. To do so would be an infringement on the pot-hunting monopoly.
3. For the same, or a yet deeper reason, he must not give his birds away.

He must patiently endure the wrath of vengeful farmers, whose hamp has been trampled down by the privileged order of pot-hunters.

5. Failing in any of these requirements, his dogs shall be poisoned and himself vilified.

I respectfully submit that the demands of "Windom Pot Hunter" are unreasonable. WANSE.

#### MISSISSIPPI TURKEY HUNTING.

ALREADY many of our sportsmen may be seen looking after the condition of their trusty breech-loaders, putting them in order for the grand gala day; for all will go on the 15th—some to enjoy the chase of the fleet-footed deer as he glides gracefully from his long and uninterrupted summer retreat with the bugle notes of the eager pack in full cry at his heels. Others to follow the grouse. He emerges from the thicket a full quarter in advance of the bounds. He stops and listens. It is the old familiar sound that he once disturbed him the winter before. He does not tarry long, for the restless pack is soon at his heels. He bounds away and is soon far in advance of his eager pursuers and is brought down by the steady aim of some hunter who has taken a stand for him; or, perhaps, he eludes both hunter and hounds to run the gauntlet at another time.

Many of our sportsmen care very little for deer hunting and prefer to take their setters and pointers and hunt the quail, of which we have an abundance. There are others who go forth in search of that most beautiful of all game birds in America—the wild turkey. The sportsman who has not hunted this bird has missed the most pleasurable giving excitement of all sport connected with dog and gun. I guarantee that it will cure any man in the world of the most obstinate case of blues. At this season of the year they go in flocks, one or more broods together, of ten or twenty birds, who keep a sharp lookout for hunters, hawks and other varmints that are likely to disturb the young ones. Upon the approach of danger they give the alarm and away goes the brood to the brush. They are about grown at this season of the year, and the young gobblers are in what we call the "Shanghai" state—rather gawky and awkward. The young hens are better developed and are more beautiful.

The first thing we do preparatory to a turkey hunt is to hunt up our turkey caller, clean the dirt-drawer's supply of dirt and spiders off of it, give a yelp or two to see that we have not forgotten how, get our horn, dog and gun, and then we are off for the woods.

After getting to the woods, we drive every part of the country in which we expect to find them, particularly around small fields that have been planted in corn and peas and surrounded by woods. The dogs—usually hounds or setters—being good reliable ones, know what we are hunting, and never a whimper do you hear from them unless they scent a turkey. When they "strike," if cold, they circle until they strike it fresh and warm, where the turkeys have only a short time before scratched up the leaves. Then away they go, the hunters after them on horseback—if hounds, in full cry; if setter, never a word until he sees the game, when he rushes among them, barks and flushes the flock, the same as the hound in every direction. The turkey hunter, on the other hand, comes up in the meantime and calls off his dog, which is running and ripping in every direction, endeavoring to find out what has become of the game. (A real fine setter, well trained for turkeys, has the most intelligent looking countenance after he has flushed a flock of turkeys that I ever saw on a dumb brute.) Having called off his dog, the hunter circles around to see if he has them all up; if so, he then rides away in an opposite direction, taking his dog or dogs with him, at least a quarter of a mile or more, bitches his horse and waits—in the early part of the season, only a short time. When everything becomes quiet, he leaves his dog with his horse and quietly goes back on foot to where the turkeys were flushed. Having selected a place by the side of the log, or in front of a large tree, where he can see all around him and not be easily seen, he draws his yelp and gives a careless chuck, "yelp yelp yelp," and the turkeys are off, and the hunter comes up in the meantime and calls off his dog, which is running and ripping in every direction, endeavoring to find out what has become of the game. (A real fine setter, well trained for turkeys, has the most intelligent looking countenance after he has flushed a flock of turkeys that I ever saw on a dumb brute.) Having called off his dog, the hunter circles around to see if he has them all up; if so, he then

they become thoroughly educated, and when flushed the hunter sometimes has to wait till near sundown or roosting-time before he can get them to answer; and when they have concluded to come they will slip on you without saying a word. When the hunter finds them so wild as this he has to be very particular when they game comes in sight, not to move any portion of his body, or the wary bird gives his note of alarm (qu!) and is off like a bullet. If a musquito lights on the hunter's nose he must let him remain and bite, or lose his turkey. I have sometimes found them so wild in the latter part of the winter, just before "gobbling time," that when I would flush them in the early part of the day they would pay no attention to a yelp any time during that day. I might catch one slipping on me and kill it, but when I find them so wild as this I quietly leave them and get among them early the next morning, and find no difficulty in killing one or two at that time; but after I have fired my gun once or twice, the others become very shy and are hard to kill.

"Keno" has promised us an article on Mississippi bass fishing.

#### A MUD DUCK HUNT.

YEARS ago a half dozen of us college chums used to spend our spring vacation in a crusade against the water-fowl which were so abundant in the marshes along the east bank of the Father of Waters, below Burlington, Iowa. Greek roots and comic sections were banished from our minds, and we at least had a free and easy time with no learned professor or conceited tutor to spend several hours a day in finding out how little we knew, although there were numerous attendant hardships. We usually camped on an island several miles below the town, to avoid the labor of rowing back every night, and the fickle-minded weather-clerk who was on duty during March or April frequently made it decidedly uncomfortable for us. Yet when nature refused to smile we tried the hunter to be merry, and with the assistance of the wit of the college, who was always one of the party, generally succeeded fairly well.

We picked our company, and were disposed to be amused when "The Duke" proposed to go along. But when he insisted on going, in spite of numerous broad hints that his absence would be painful to us, it became positively annoying. Jones, our humorist, came to the rescue, and with a sly twinkle that promised fun, said the Duke must go. It was accordingly arranged that he should be one of the party.

The Duke was one of the characters that help make up a variety in the world, though just what he was created for was never clear to me. He was a born and bred dandy, masculine Flora McFlimsy, and only just a trifle less feminine than his fairer sisters. The chief objects of his life were to wear fine clothes, take care of his magnificent whiskers and sipmer in bad French to girls who were shallow-pated enough to listen. It would be impossible to conceive of any human being farther removed from the typical sportsman, and what he wanted to go duck duck shooting for we could not guess. Yet when it was arranged that he was to go he zealously began preparations, and when we called for him on our way to the depot he had enough baggage to fill a Saratoga trunk. He had never owned nor handled a gun, but had purchased the best in the market for the occasion. His supply of ammunition was more than the whole party could use, and he had several changes of linen laid out. But the Duke's costume was immense. The day was warm, and he had on a new light suit, flaming necktie, long-legged patent-leather boots, silk hat and lavender kids. We remonstrated in vain, and the Duke started off the best dressed man that ever left home for a week in a swamp.

When we were fairly off Jones unfolded his plan, which was simply to give the Duke a mud bath. The swamp is full of channels, in which the water is two or three feet deep, and all the soil is soft mud, washed in by the freshets, so that the boats were in constant use. There were eight in the party, and the plan was to take three boats, in one of which should be only the Duke and one other man, and at the first good chance to dump him. It was agreed to, the well-worn cards brought forth, and while the Duke innocently looked on Jones was condemned to put his own plan in execution.

Early next morning we pulled out of East Burlington, and two or three miles below began to reach the feeding-grounds, where the ducks were busy with their morning meal. The boys couldn't resist the temptation for an occasional good shoot. The Duke caught the fever, and leaving Jones to manage the boat was soon banging away as fast as he could load and in such a reckless style that he was in more danger of shooting himself or some of the other boys than a duck. Jones watched his chance, and it soon came. The boat was close up to a particularly soft mud bank, and when the excited Duke was standing up in the stern and ready to fire, a quick jerk did the business. The gun went in first, and he followed it as far as his shoulders. He managed to get out alone, and half-strangled, made a dash for the bank to get out of the water. This fairly buried his lower extremities, and he had to be helped out.

What a spectacle he was! His glory had departed in an instant, and his love for duck hunting had gone with it. All he wanted then was to go home, and we fished out his gun, put him in the small boat, and started him for Burlington, sadder, wiser and not half so handsome as when he started. In spite of his injunction to secrecy the story leaked out, and in his mortification the Duke went off on a European trip, and failed to return. He has probably been in places since where he had more sport than duck hunting on the Mississippi marshes, but he don't know to this day that his misfortune was not solely the result of an accident. COKK.

#### ECHOES OF THE "DITTMAR SPORTING POWDER."

HANCOCK ON DITTMAR POWDER.—FOREST AND STREAM, the leading American sporting paper, is making war on the Dittmar powder and says it is not fit for use.—*The Hancock (N. Y.) Herald.*

MACON, Ga., Oct. 12.

Editor Forest and Stream:

Allow me, as one of your subscribers, to thank you for the entirely convincing articles concerning Dittmar powder. I have frequently used this powder, but you have so clearly demonstrated its danger that henceforth I discard it. J. S. B.

Editor Forest and Stream:

Your writing up the true character of the Dittmar powder was appreciated by many Western readers of the FOREST AND STREAM.

PEULTON, Ill., Oct. 16.

Duck shooting has been better here this fall than for many years, but the mallard are not in as good condition as autumn ducks generally are. X. Z.

CHICAGO, Ill., Oct. 15.

Editor Forest and Stream:

A paper that can give us such clear, intelligent and decisive articles, as was your late treatment of the "Dittmar Sporting Powder," is just the kind of a journal the American sportsman wants. Allow me, and numerous others in this city with me, to thank you for having set at rest, once and forever, the question of the safety of Mr. Dittmar's powder. The average gunner has no time to study these things. You have shown us that hereafter we may rely on the FOREST AND STREAM for just such information and advice. N. N. J.

NASHVILLE, Tenn., Oct. 12, 1880.

Editor Forest and Stream:

I have been using the Dittmar powder for the last year and just ordered a box from Mr. D., who failed to send it, his charge d'affaires writing: "Mr. D. has been sick for some time and we are out of powder." But a friend of mine loaned me one of your papers (Sept. 23, 1880) and called my attention to your lengthy article on Dittmar powder, and I must say I am greatly surprised at what I learn. Under the circumstances I of course will discard the use of this powder; and am now amazed that all these things should have remained hooded until lately. A party lost an arm here some time ago by his gun exploding; it was said the powder was made in St. Louis and was the "noisless." I suppose it was closely allied to the Dittmar. I have often wondered why some loads were so much more effective than others. I really like to shoot it, as it is clean and free from that "blasted" cannonading that we have in the black. V.

#### A DITTMAR POWDER TRAGEDY.

In Two Acts.

Act I.

Boy, Girl, Jim.

Act II.

Girl, Boy, Jim.

Act III.

Boy, Girl, Jim.

Unknown Poet.

#### INFORMATION WANTED.

1. F. W. D. wants good quail and woodcock shooting within 100 miles of New York.
2. S. L. T. wants to find a place where he can hunt and fish for a living.
3. W. K. writes: "I am a consumptive, and am desirous of passing the coming winter in some location where game is abundant and it is also healthy."
4. Mr. R. M. L. wishes "advice as to best place I could go, about 350 or 450 miles either north or south of New York City, where I can find good duck shooting and a comfortable boarding-house."
5. Will some reader of the FOREST AND STREAM inform "Lower Bank" through its columns where the best place to camp out is, in the piney woods of Maine. A place where there can be found trout, deer and moose, or feathered game. Also what would be the expense (estimated) of each one of a party of six starting from Hartford, Conn. in camping the party to be independent of hotels or log cabins, preferring to rough it in tents.
6. Will you or some of the readers of your valuable paper please inform me whether wild rice will grow where the white pond lily has got so that it almost covers the surface of the water? Will it kill the lilies out? KUTCHINSKY.
7. "C. S. K." Lakesville, Ct., wants a Florida companion.

CHEMVESTING OLD BROWN.—How often do I turn your pages over, and how I long for Saturday to come. I often wish you came twice a week. But sometimes you make me sick and discontented. I know you mean no harm, dear FOREST, but when I read of the game and fish that others are taking, and selfish I can only steal off a few hours at a time. Once, before my wings were clipped, I too enjoyed my gun and dogs.

Two years ago I knew a swamp of about a mile in length where the woodcock just laughed because no one was allowed to shoot in that swamp. It was owned by an old farmer by the name of Brown, a veritable old-in-the-swing, who would not shoot himself nor allow visitors to shoot. His hired man told me, one time when I ventured on the ground, not in a very mild manner, that Mr. B. did not allow any shooting there, and that I had better leave, and forthwith I left. Years before men had bagged fifty and sixty birds per day in that swamp, and a desire possessed me that I must hunt that swamp.

I heard of the Dittmar powder, no smoke and very little noise. I went up to the city; saw the gun dealer; he showed me a sample of the powder, and I ordered a can, thinking all the time of my pet swamp of woodcocks. In due time I received the powder, and how well I remember my imaginations as I rode home, thinking of the following day's sport. Already I could see my two setters, Dash on a point, and Dandy backing him up. Then I was looking through the alders to find an opening where I would be the most likely to get a shot. Then I would speak very low to my dogs, "Go on," and Dandy would creep up. "Weeter, weeter," would go the birds. Then I would throw up my gun; a puff, a little noise, and yes, I could see the fine feathers through the top of the alders. Old Brown couldn't hear that—no. "Dead bird!" In would come Dash with a fine longbill. But where is Dandy? Stooping down I would see him just a little further on stiff as a poker—and so did my thoughts run.

I was home about two o'clock. I loaded up six shells with Dittmar according to the "directions." I knew of a small flock of quail near home, and in less than two hours Dandy and Dash brought up hard on. I always let my dogs stand one or two minutes. While I was waiting I thought it was such a good place to shoot I must have two birds, and so I took the Dittmar cartridges from my gun and put in two of Hazzard's. I could rely on those. I got one bird with each barrel when they first got up. That's pretty good, I thought. Now for Dittmar. The next was a cross shot. I looked across my old Parker expecting to start the feathers. Well, the gun went off, but not until after the bird had gone before

it. And with the language of one of old I cried, "Great Pompy, ye are too slow!" I tried another Dittmar cartridge with the same result, and that was enough. I shot two more birds with black powder, and I came home. I fired the four remaining cartridges at bar posts with very poor results. They all went off, but some of them hated to, awfully.

But I did not give up about that swamp. You see, dear FOREST, old man Brown had a daughter, and she was pretty, too. Well, to make a long story short, I made Miss Mary's acquaintance, and through her good graces I received an invitation to come up and put my horse in her father's barn. She told me that some of the neighbors did not allow hunting on their farms, but that I was welcome to hunt anywhere on their farm. I thought to myself, "Bless your heart, I only want to hunt down in your father's swamp; have been trying to get there for two months." Of course I went, and I made the old swamp just ring. The first day I bagged twenty-seven birds, not all longbills, there were three partridges and five quail among them. Dash and Dandy backed up each other, and more than once did I lose them and find them still as a poker. JOHN FOX.

LAKE OKEECHOBEE.—Until lately little interest has been manifested regarding Southern Florida. With the influx of settlers and pleasure seekers, the region, made of interest by the Seminole war, is attracting more attention. The expedition of the FOREST AND STREAM for the exploration of Lake Okeechobee settled the disputed point about the extent of the lake, and whether it was accessible to anybody but an Everglades-roving Indian. Coming down the St. John's River last April, I met a Major Allen, who still owns the little canoe, FOREST AND STREAM, left by the expedition on the shores of that inland lake. Major Allen has for several years lived near Okeechobee, and seemed well informed regarding its extent and surroundings. The shores of this lake, which is sixty miles long and forty wide, are lined with fine black and red mangroves, cypress and crab forests. Observation Island, long and flat and the resort of numerous wild fowl, is the largest of its islands.

Since the expedition of the FOREST AND STREAM, the solitudes have been disturbed by a little steamboat, fifty-nine feet long, named the Mary Bell. Several times it has made the trip from near Lake Harvey, above Enterprise, down the narrow serpentine Kissimmee River, and around Lake Okeechobee. The excursionist, well provided with sporting materials, leaves the St. John's River steamboat at Tuscawilla, on Lake Harvey, and after a wagon ride of eighteen miles is placed on board the little steamer. Soon he is firing briskly away at alligators, ducks and deer, perchance surprised by the crusher. Flocks of cranes, ibis, gulls and curlews rise continually. There is no finer place in Florida for the taxidermist, eager for brilliant plumage and snow white plumes, than this newly opened region. When any desired game or bird is winged the rowboats from the steamer act as retrievers. As down the river you wind, going four times the distance in a straight line, new objects of interest are continually being disclosed. For ten days or two weeks the excursionist tires, only from the monotony of firing from morning until night.

The deer hunting is especially fine. The ranges are through regions seldom hunted, and where the noise of your gun often only awakens curiosity. Last winter, thirty miles from this region, I was surprised one day by a deer walking up to within thirty yards, and there standing looking at me, as much as to say, "Who are you? What are you doing here?" A little later I fired several rifle shots at two deer standing at about one hundred and fifty yards, without exciting anything but their perplexed curiosity.

It is not an unusual occurrence to see fifty or seventy-five deer during a day's ride through this region. Next winter another miniature boat is expected to be launched, so that trips can be made to Okeechobee twice every month. Okeechobee seems to be changed. An enterprising land company, in which some English capitalists are interested, have secured a charter from the State for the drainage of the Lake into the Gulf of Mexico. Between the Lake and the Gulf there is a fall of thirteen feet, which would drain two-thirds of the lake, as it is supposed. An outlet of about five miles in length has to be cleared through a swag swamp, and the water will gradually drain into the sea. The clearing of the millions of acres of rich bottom lands, and the opening the State its portion to sell at reasonable rates alternate seasons. This land, it is hoped, will be productive of tropical fruits and early vegetables, which the steamers will transport northward. Whether the scheme will succeed we cannot tell, but we do know that this region is one of the finest places for the hunter and inland fisherman in Florida.

"Firing from morning until night" from the deck of a steamer is not only monotonous but it is disgraceful and abominable. The captains of these boats ought, for the sake of decency, to put some limit to the cruelty of their passengers.

FLORIDA GAME NOTES.—*Gulf Hammock House, Outer Creek, Levy County, Fla.*—Florida, from present indications, will have an abundance of game this fall and winter. We are having fine bagging of quail, curlew and duck right in front of the house (Gulf Hammock House), but Captain Wingate has stopped the shooting of them until more guests arrive at the house. The guests that are here now are having the sport of a Delightful week. We are waiting for our bear hunt and our deer hunt. We started at 6 o'clock. We had a deer about a mile, and when we got there we found that the bear had left about an hour and a half before; but our dogs were eager for the fray, and so were we (six of us), and off we started. We had a run of some eight miles before the dogs brought him to bay in the top of a large live oak, and a very bad place for a shot. We concluded to let him have the contents of one of the cartridges out of a Henry rifle, when he came running down like a bag of corn; he no sooner struck the ground than the dogs laid hold of his hind legs and the same with them. One man in his excitement ran up and struck bruin across the head with his fine Scott gun and completely ruined it, which taught him a dear lesson that bruin's head is hard. We had to let the bear have the contents of one more cartridge out of our Henry, which finished him. When dressed he weighed a trifle over 300 pounds. We also brought in a fine deer with us. The Captain has secured one of the best bear hunters in this country, Mr. Watkins, with his pack of dogs. We will evidently have fine sport fishing and hunting this winter in Gulf Hammock. McF.

CHICKENS, DUCKS AND QUAIL.—*Miford, Neb., Oct. 8.*—I left Boston the last day of August. My first stop was at Worthington, Minn. My party consisted of myself and four dogs, and I had my hands full with the various changes of baggage-cars and baggage-masters. I spent the month of

September in Worthington and vicinity, bagging to my own gun three hundred and fifteen chickens, besides many mallards, teal, golden plover, etc. My shooting was done over puppies, and I had a great deal of bad weather, or my bag would have been larger. When I left Minnesota (Sept. 17) geese and ducks were coming into the prairie sloughs by the thousands, and by this time the lover of that kind of shooting could have all he desired. I arrived here September 29, and attended the field trials of the Nebraska State Association, a report of which has been forwarded to you, and I will make no comment, except that I was fortunate enough to win with my Dorr, a dog that I had not put in trim and had no intention of running.

I ran now in a good quail country, making as good a bag as I care to tally. I can easily start ten to twenty coveys a day, but until the leaves fall from the trees in the "draws," very large bags cannot be made. I propose to work eastward in a few weeks, bringing up at Vincennes in season for the trials.

F. A. T.

**SNARING IN CONNECTICUT.**—*Tolland Co., Conn., Oct. 9.*—Wild pigeons are quite plenty this season; but they are wild, and I have not heard of but one large bag being taken. They feed early, then take the woods during the day. The town of Stafford seems to be their resting-place this year. Woodcock are scarce now—the summer birds gone, and the late birds not yet come. There is, so I have found it to be, the quail seem to be quite plenty but very much scattered, and in small coveys of 6 and 8. Partridges are plenty on the mountains and swamps in mid-day about Mansfield and Wellington; but they are most awfully snared, and their total extermination is not far distant. The Connecticut law, allows them to be taken on one's own land, and the law is most terribly abused; almost any farmer allows boys to set snares on his lands, but will not, on a decent man with a dog "kill all his game," as he says, showing his ignorance of the subject. The truth is, that he and his boys cannot kill a partridge with their old Queen's arms unless they get one sitting on a log. Snared birds are sold here, and in all towns about here, in total violation of the law. If there is a sportsman's club, or any persons in this State interested in this subject who will come here or back me up in this subject I will do all I can to stop this mean business of the dealers in purchasing these birds.

MRS.

**MICHIGAN GAME NOTES.**—*Ann Arbor, Oct. 9.*—On Thursday last, the 7th inst., Mr. J. Haskell of Bradner, Ohio, and myself met for a little hunting frolic for quail and woodcock and to try the grounds on the Toledo section of the Ann Arbor Railroad. Mr. Haskell brought with him his two favorite black-and-tan Ned and Sue, seven months old, to which he is strongly attached on account of their hunting qualities. The day was pleasant and the birds tolerably plentiful, especially the quail. We found a few woodcock in some of the wet grounds thereabouts, but they were scattered wild. The quail were in fair numbers for this portion of the country. Our best success was in the large beds of rag-weed that skirt the woods on the west of the railroad. The pups behaved beautifully and never have I seen prettier or better work done than was accomplished by those two pups: they countered, backed, dropped and retrieved all by motion of the hand in a style equal to the best trained old dogs that I ever saw. We made a pretty fair bag for this section, eleven quail and four woodcock. My great delight was to watch the movements of these young pups and see the charming work done by them. I was more than pleased at the splendid results achieved by their training, and Mr. H. tells me he has three more of the same litter almost as good.

We need a little more rain to make good cock shooting in the swamps and swales about here. Rabbits and squirrels are thicker than I ever saw them before, and when the first snow falls we shall try our beagles among these frisky little fellows hereabouts, when I will report results.

SENEX.

**WISCONSIN.**—*Pon du Lac, Wis. Oct. 10.*—The shooting in this vicinity is now quite satisfactory, as ducks in great numbers have filled the marshes, and our sportsmen are improving the time to good advantage.

The deer hunters are also getting in motion for the coming season, that under existing laws closes Nov. 30. The old parties go out as usual, and there seems to be charms in deer stalking not to be resisted, as we find them going out with the regularity of the seasons. Messrs. Carpenter and Adams will locate in the vicinity of Florence, Wis.; Mr. and Mrs. L. M. Wyatt left the R. R. at Waukegan, Mich., and expected to pitch their tent twenty-five miles away in their favorite location. Mrs. Wyatt accompanies her husband annually to the woods, this being her fourth season. She has all the enthusiasm of an old campaigner and is entirely at home among the wilds of the North.

Messrs. S. B. and John A. Henry and Mr. Carter constitute the veteran organization and expect to locate in the vicinity of Hermansville, Mich.

All these parties go out well equipped and are usually successful, and we expect a satisfactory report at the close of the season.

You will excuse the style of this epistle as it is written on a tin plate twenty-five miles from any place.

Am in the wood and camp, am having fine days, good fare and plenty of game.

X.

**ARKANSAS.**—A correspondent of the *Germantown Telegraph* writing from White County, Ark., says of the game of there: "As this State contains much land which, on account of its swampy or its rocky or hilly surface, cannot be cultivated, the larger animals confine themselves mostly to these uncultivated districts, from which they make occasional raids into the settlements and make sad havoc among the farmers' calves and pigs."

"The deer and turkey have more impudence and refuse to quit the land of their nativity. They still occupy the fields, and even sometimes the gardens of the settlers. They being very fond of stock peas, the farmers must be very vigilant both night and day to protect their crops. Many are shot near by, and frequently several deer are taken almost within the suburbs of towns containing two thousand inhabitants."

"During the game season the boats navigating the White, Arkansas and other smaller streams, are loaded with such game as deer, bear, turkey, rabbits and prairie chickens, which serve to feed the citizens of the cities and towns along the Missouri river."

**A HINT FOR PATTERN TRIALS.**—*Boston.*—I wish to call attention to one thing that has no doubt caused many gunners to be dissatisfied at certain times with their guns. I saw a young man targeting his gun at 40 yards on pieces of paper 30 inches square and he was very much dissatisfied with it, say-

ing the choke was shot out, and blaming the gunsmith for deceiving him about the pattern, and vowing that he was going to get a new gun at once, etc. Having had considerable experience at targeting guns, I went and got some sheets of paper 4ft. square, and asked him to try his gun on them; which, after asking if I supposed he could not hold a gun on the "side of a house," etc., he reluctantly did; when to his surprise he found that the gun made a first class pattern, drawing a 30 inch circle from the centre of the charge, which, however, was not in the centre of the target by considerable. I speak of this, as I have often seen old gunners stick up a piece of board or a small piece of paper to test the pattern of their guns, and judge accordingly, no matter whether they held on or not; and many good guns have been hastily condemned on this account.

PLUYER.

**BUNCHED SHOT.**—*Neiropot, Ky.,*—As I consider chilled shot, especially Tatham's, to be superior to any shot made, I feel a lively interest in knowing how you can account for the wonderful performance recorded in your paper of Sept. 16, under heading "Bunched Shots." I have used this shot for some time and am at a loss to understand how any loose shot can perform such feats. I have tested this shot in choke and cylinder bores and consider it but justice to the manufacturers to have this matter explained, as to me it seems impossible.

C. J. S.

The fault is not with the shot but with the gun. There is less reason for the bunching of chilled shot than of the ordinary shot, but some guns do put the pellets into a bunch. In the 1875 London Field Gun Trial one of the guns was barred out on just this account.

**PENNSYLVANIA.**—*Pottstown, Oct. 12.*—DEAR SIR: Our gunning season opens here on the 15th October. Partridges and rabbits are more plentiful this season than they have been for several years, and we expect lots of sport. Woodcock are scarce in our section of the country; squirrels more plentiful this season than they were last, as is also plover and pheasant. We have some very fine deer here and plenty of sportsmen, but we have some very inconsiderate straggling hunters here, as they are not sportsmen nor even pot-hunters, for I heard of some that had been killing partridges last week, and have no doubt the same parties have been shooting the poor, skinny rabbits. There is a sporter looking after them, and if they are caught they will get the full extent of the law. I hope when the season opens the hunters will not go out and see who can kill the largest amount of game. As long as the weather is warm game is not in condition to kill, and if it is slaughtered up to the full during the first weeks, till the time comes that it would be in condition, you can scarcely find any. So a word of advice: Don't kill the half-grown birds or rabbits, as one a month later is worth a half dozen now.

J. W. E.

**TENNESSEE.**—*Savannah, Oct. 12.*—Although the shooting season has nominally begun but little has yet been done in that line. I have been out a few times, but merely to train a promising young dog several times leaving the gun at home. Many of the beavies I have found were too small to shoot, and the rank weeds will prevent anything like sport until a heavy frost comes to our relief. Birds are plentiful, thanks to a dry June. The farmers have an adage that a dry June always presages a good crop. I can't say about that, but know we always have more quail when there are no heavy June rains to drown the young birds and break up the sitting hens. There is an unusual plentiful crop of meadow larks all kinds this fall, and in all probability pigeons and ducks will be here in unusual numbers. The weather is too warm for any sport yet a while.

WILL.

**WESTERN NEW YORK.**—*Oswego, October 11.*—Season mild and duck-duck slow in arriving. The Ontario Hunting and Fishing Society have had some shooting upon their preserve. Red-head and black duck, and a few birds are killed along the coast. Within ten days game will be prime and hunting ditto. Squirrels abound in all the timber along the line of the lake (Ontario); the open winter of '79 and '80, and the abundance of nuts accounting for the same. Partridges moderately plenty. Within ten miles of this city, from 3 until 6 P. M., October 8, I killed two fine black squirrels and a cock partridge. Rabbits and foxes are in unusual numbers. Shooting grounds both for water and wood sport easy of access.

F. E. H.

**CALIFORNIA.**—*Elk Grove, Oct. 3.*—We are too far from you for information as to plenty or scarcity of game to be of much interest to your readers, but if you will give a call you will find such acres of ducks and geese of all varieties, Canada geese, brant, white-fronted and snow geese, as well as Hutchings' brant—as can only be seen elsewhere in some of the Southern States, and I will assure you a hearty welcome from our sportsmen. Deer are very plenty in the hills this fall, and with an occasional grizzly or California lion thrown in, a sportsman must be hard to suit who cannot find enough to content him.

W. L. W.

**WEIGHT OF RUFFED GROUSE.**—*Syracuse, N. Y., Oct. 18.*—I give below the weight of four ruffed grouse, the heaviest we have any record of in this part of the State: One, 1 11-16lb., killed by M. Knapp; one, 1 12-16lb., killed by C. Lansing; one, 1 12-16lb., killed by A. A. Hudson; one, 1 13-16lb., killed by Wm. Nicholson.

J. H. M.

We hope that sportsmen will send us through the fall the weight of their heaviest birds killed. Such a record would not be without value. The four grouse referred to by our correspondent were very heavy birds.

**MIGRATORY QUAIL.**—*Boston, Oct. 11.*—As regards the return of the birds, I say that many of my neighbors claim to have seen them this summer and fall, but they are hardly competent to judge, so I don't feel sure of it. The quail lay is off on the 15th, and if they are here the gunners will soon find them, and probably shoot some before noticing the difference. A flock (very) was seen about twenty miles below my town a fortnight ago. Probably some of those imported by Mr. Downer three years ago, and released then.

H. P. T.

**INDIANA.**—*Oct. 14.*—*Editor Forest and Stream:* The following leave for the Michigan Peninsula, on a deer hunt, the 21st inst.: W. L. Gregory, A. Wyson, R. W. Matthews, J. S. Stephenson, J. C. Kerns, J. Swope, R. C. Brown, Higgins and myself, of Lehigh, Ind.; and D. M. Gregory, Zionsville, and D. C. Burchardthal, of Indianapolis. M. Cox, L. Raina, S. Dougherty, E. Reynolds, A. D. McCormack

S. Daily and O. C. Witt expect to go a few weeks later. I will give you some notes of our hunt.

W. C. G.

**FOREST AND STREAM GENERAL PASSENGER DEPARTMENT.**—*Chicago, Ill., Oct. 14.*—The following parties have passed through here since Monday en route to the hunting grounds: C. Langdon, and party of four, from Ohio, going to Quin nisee, Mich.; Dr. C. Gifford, and party of four, from Indiana, going to Florio, Wis.; Isaac Case, and party of eight, from Illinois, going to Quin nisee, Mich.; Whetstone and Fisher, and party of twelve, from Indiana, going to Menomony, Mich.

**SHOOTING AT THE ST. CLAIR FLATS.**—Our correspondent, W. B. Willis, Jr., writes as follows about the shooting at this favorite resort. He says: "I had a good day's sport last Friday (Oct. 8) at the Club. Killed forty-seven ducks in the morning, and on my way home jumped into a cornfield with Star, Mack and Kink, and picked up fourteen quail after 4:30."

**ONTARIO.**—*Belleville, Oct. 13.*—Yacht owners now use their craft for conveying them to the marshes, a few mile distant, for the purpose of duck shooting, of which there has been but little as yet, the birds being scarce. Snipe and plover are, however, tolerably plentiful. In the woods game is fairly abundant. Some sportsmen have met with good success among the deer, and a considerable number of partridges (ruffed grouse) have been shot.

**ALL AROUND NOTES.**—*Yellow Bud, Ohio, Oct. 13.*—Just returned from an extensive trip through Kentucky, Tennessee, Arkansas, Missouri, Illinois and Indiana. Hunted some, but found game scarce. Killed some chickens—sport hard to equal, when one has (as I have) a first class dog.

S. L. N. F.

**OHIO QUAIL LAW.**—*Columbus, Ohio, Oct. 16.*—You are mistaken when you say law on quail in Ohio is out Nov. 15, as it was changed last year to Nov. 1 to Jan'y 1. I give you this, as some may be able to come and have first of it.

F. F.

**ROBINS IN WESTCHESTER.**—*Superior's Office, Town of Westchester, Oct. 16.*—A law was passed Feb. 1, 1878, by the Board of Supervisors of this county which prohibits the killing of robins during the month of October.

JAS. HENDERSON, JR.

## SHOOTING MATCHES.

## SPARTANBURG TOURNAMENT.

SPARTANBURG, S. C.

## FIRST DAY.

Team match, from Card rotary trap, arranged to throw in any direction, 50 balls, 18 yards rise. Entrance, \$12.50, \$50 added by citizens of Spartanburg. First team to receive 50 per cent, second team 30 per cent, third team 20 per cent, after paying fourth team entrance fee and deducting cost of balls used:

—October 29 the New Bedford Rifle Team of ten men shot ten men of the Raymond Sportsmen's Club, at Bellevue Range, Medford.

**MADMOIT RIFLE GALLERY.**—Boston, Oct. 16.—The second week in the Inaugural Rifle Match, at the above gallery, has shown some remarkably fine shooting, and particularly the last part of the week. Mr. Pollard was nearly successful in getting the extra prize of ten dollars for a clean score of eight consecutive bullseyes. He made ten consecutive bullseyes, ending a score of 36 with three bulls, and starting a new score with seven bullseyes. The subjoined summary will show the standing of the several competitors to date. 50 yards; rounds, 8; possible 40; five scores to win, or possible 200:

Frank Hollis.....87 37 37 88-187  
W. A. Pollard.....36 37 37 88-187  
Geo. D. Edison.....36 36 36 37-181  
A. G. Goodspeed.....35 35 35 38-178  
Chas. B. Robinson.....34 35 35 35-174  
Chas. B. Otis.....34 35 35 35-174  
S. Fogg.....34 34 35 35-173  
C. Sawyer.....34 35 35 35-173

B. H. Daley.....34 34 34 34-169  
F. J. Snow.....33 33 33 34-166  
E. Shumway.....32 33 33 33-163

#### A POETICAL WALL.

The Hyde-Halford fiasco, about which we have not been at all backward in echoing the opinion of every rifleman of prominence and the general feeling of the rifle world, has almost passed into a mere recollection. The indignation is simmering away as it comes to be understood that Englishmen gradually understand the situation. Up from the pleasant village of Flushing, on Long Island, where Hyde has a residence, comes to us the following effusion. Its pleasant irony is a relief after the bitter flings from the same source, and we print it as a pleasant fling to this unfortunate match:

#### THE MUG-HUNTERS' DETECTIVE.

"As finally made up, the Hyde team included Jackson, Laird, Scott, Brown, Hyde, Dudley, Gerrish and Rockwell. The 'representative American gentlemen,' as they were proved to style themselves, have become a merry party of mug-hunters."—Editorial FOREST AND STREAM, July 29, 1890.

Credmore "will be no place for mug-hunters, or those who shoot for the duce."—Editorial FOREST AND STREAM, Aug. 26, 1890.

Mentor of marksmen! Sporting sage!

We know it would be meet

That every rifleman should bring  
His trophies to thy feet.

Thou searcher into heart of man,

Though young, so wondrous wise,

The hidden motive thou canst scan

Of each who seeks a prize.

Avant! ye jugs, ye silver mugs,

Medallions gold and bright,

Ye ducats roll, ye tempt the soul,

Heigh! presto! I take your flight!

Jackson, forbear! Scott, do not dare

More than one prize to take!

Oh, Sumner, fly! Brown, do not try

Too many "bulls" to make!

Dread W. J. sits, with boding glance,

Mug-hunter to decry,

And who that wins would dare advance

Beneath his scathing eye?

No, miss your targets, burst your guns,

Hit markers in the chin.

'Twere better far, the sage hath said,

Than silver mugs to win.

## Archery.

**HIGHLAND PARK, Ill., Oct. 11.**—Arrangements have been made for shooting three matches, each of 96 arrows at 60 yards, between the Oakland Bow Club of California and the Highland Park Archers. Each club shoots on its own range and reports scores by mail.

The following scores were made in the first match, Oct. 2:

**Highland Park Archers.**  
N. E. Swartwout.....23-89 23-119 23-131 22-100 89-449  
Dr. E. B. Weston.....18-83 23-109 19-114 22-106 89-412  
Mr. Taylor.....22-109 22-108 21-101 21-91 81-511  
C. G. Hammond.....22-88 21-169 19-89 20-78 82-564  
Grand total, 340-1,596.  
**Oakland Bow Club.**  
F. C. Havens.....23-111 23-111 23-111 21-107 81-599  
R. J. Brady.....16-87 24-112 21-119 18-82 79-399  
J. E. Cook.....18-78 16-75 19-102 19-91 72-346  
A. F. Collins.....19-63 16-64 18-69 18-69 69-255  
Grand total, 295-1,371.  
Highland Park won by 45-219.

#### NEW YORK ARCHERY CLUB.

THIS club has now been organized one year, and in order to celebrate the event the first annual fall prize field meeting was held at the Archery Lawn, in Central Park, Friday, Oct. 15. Everything combined to make the event one to be long remembered. The weather was delightful, enabling the spectators to enjoy sitting in the shade of the club's tents, from which point they could witness the shooting the entire length of the field. There were twenty targets placed at sixty yards apart and the gentlemen shot the usual American Round, while the ladies shot the Columbia Round.

Everything passed off pleasantly, and the club, having prepared a good list of prizes for their visitors, made the occasion of more interest to those who came from a distance.

Invitations were sent to all the clubs in this vicinity, and representatives were present from the Brooklyn club, Nottingham Archers, Elizabeth; Toxophilite Club, Newark; Spuyten Duyvil Club; Riverside Archery Club, Chicago; Oritani Archers, Hackensack; Cedarwood Archers, Poughkeepsie, and Robin Hood Archers, Nyack.

Miss E. T. Morton, of the New York Club, made one of the best scores recorded in this country, at the Columbia Round—viz., 337. After the shooting was over, the president presented the prizes to the successful visitors, as follows:

Mrs. Gibbs, Toxophilite Club, Newark, scored 281, and won a royalwood express rawhide-backed bow; Miss Drandee, Nottingham Club, Elizabeth, scored 266, and won half a dozen prize arrows; Mrs. Rutter, Toxophilite Club, scored 227, and received third, and Mrs. Dr. Bailey, of the Nottingham Club, took fourth and last prize, of an arm guard and tassel, with a score of 190.

The prizes for gentlemen visitors were distributed as follows:

Mr. Nash, Brooklyn Club, prize lancewood bow, score 418; Mr. Pettigrew, Brooklyn Club, half a dozen Granger's special arrows, score 408; Mr. Hayden, Spuyten Duyvil Club, target and stand, score 393; E. L. Morse, Cedarwood Archers, score 331.

In the evening the prizes worn by the club members were distributed, and the club enjoyed a re-union. Mr. Frazer took a spit bamboo bow, score 294; Dr. McLean, half-dozen Horsman's arrows, score 274; Mr. Anten, lemonwood bow, score 253; Mr. Roper, half-dozen arrows, score 242; Dr. Elliot, Horsman's patent handle gem bow, score 242; Mr. French, two bow-strings, score 228; Mr. Pond, score 207, and Dr. DeLuna, tassel and score book, score 186.

Miss Morton won the Columbia Badge, to be worn until lost, and also took a fancy table lamp with the score of 337; Mrs. Dr. DeLuna took rawhide-backed bow, score 230; Miss Howell took a beefwood bow, score 111; Miss Wren, half-dozen arrows, score 111; Mrs. Auten, half-dozen arrows, score 105; Mrs. Hill, pair of vases, score 102. The special prizes at 30 yards were won as follows:

Miss Mangier, rawhide-backed bow, score 32; Miss Bailey, score book and string, score 17. The annual meeting of the club will take place Wednesday, October 27, when new officers will be elected.

—We know *Bitter* are above and beyond all as a nutritious tonic and curative.

## Cricket.

#### FIXTURES.

Oct. 23.—At Hoboken, N. J., St. Georges (2d) vs. Merion (2d).  
Oct. 23.—At Harkgate, Girard vs. Oxford.  
Oct. 23.—At Stenton, Young America (2d) vs. Girard (2d).  
Oct. 23.—At West Philadelphia, Belmont vs. Chestnut Hill.  
Oct. 23.—At Staten Island, Young America vs. Staten Island.  
Oct. 27.—At West Philadelphia, Belmont (2d) vs. Oxford.  
Oct. 30.—At West Philadelphia, Belmont vs. Germantown.  
Oct. 30.—At Stenton, Young America (2d) vs. Wakefield.

#### THE AUSTRALIAN CRICKETERS.

AFTER four months of severe work, which would have thoroughly incapacitated a less muscular team, the Australians have brought their second trip to England to a successful termination. It has been argued by some critics that their form during the last month was inferior to that shown during the earlier part of the stay, but it would be difficult to sustain this argument; and, indeed, when it is considered that the Colonials have not only been reduced to play without two of their very best all-round representatives, but on several occasions to bat with only ten men; and, further, when the amount of traveling they have done since the match at the Oval is taken into computation, it must be admitted that the show they have made in their later matches has only increased their reputation, certainly for pluck. Altogether the team have figured in thirty-seven matches, of which they have won twenty-one, drawn twelve and lost four. Of these twenty-six were against odds, the remainder with eleven on each side, and it is worthy of note that until their twenty-seventh engagement at Scarborough against a local eighteen, when they lost by ninety runs, and Spofforth unfortunately received an injury to his hand which incapacitated him for the rest of the tour, they had never been defeated. In some cases they had to meet strong eighteens, but of the twenty-six matches they were only defeated twice, at Scarborough and Spofforth, and against these were victorious at Southampton, Longsight, Rochdale, Burnley, Malton, Belfast, Birmingham, Northampton, Harkgate, Middleborough, Oldham, Crystal Palace, Hunslet, Bradford, Sunderland and Yealand, and drawn games at Keighley, Newcastle-on-Tyne, Broughton, Hull, Crewe, Hastings, Dublin and Glasgow. The eleven a-side matches were against Derbyshire, Yorkshire (2), Leicestershire, Gloucestershire, England, Sussex; Players (2), Notts and Gentlemen of Scotland; and of these Derbyshire, Yorkshire (at Dewsbury), Gloucestershire, Players (at Crystal Palace), Leicestershire, and Gentlemen of Scotland were one; those against Yorkshire (at Huddersfield), Players (at Bradford), and Sussex, drawn; and those against England and Notts lost. The matches against odds have little real interest, but a few statistics regarding the chief members of the team and their performance will be useful. Murdoch, McDonnell, Grouse and Palmer were the only four who took part in every one of the thirty-seven matches played; but, in addition, Boyle, Blackham and Bonner were present in every eleven a-side match. In the latter Murdoch headed the batting average with 465 runs for nineteen innings (over 25.15); McDonnell was second, with 418 for the same number of innings (over 22.4); and Boyle third, of those who played on

every occasion, with 195 for fifteen innings (over 15). Bannerman, owing to an injured hand, was unable to take part in several of the later contests, and he only figured in seven first-class matches, though his average (17.9) was a very creditable one. Grouse, who had a great home reputation, and who was accredited with an extraordinary Colonial average, neither showed style nor effect to warrant any great belief in him, and his sixty-one against Yorkshire was his only score of any note. Blackham, toward the close of the tour, was also suffering from a bad hand, and this will to some extent account for the fact that, though in all matches he has an average of 16.33 with eleven a-side, he falls to 13.10 runs for eleven innings. Spofforth's accident prevented his appearance in most of the principal engagements; and, consequently, in eleven a-side matches he only bowled 248 overs; taking forty-six wickets at an average of 8.28, while Palmer's eighty wickets were got at a cost of 11.14, and Boyle's thirty were for 15.31 runs per wicket.

The tables appended give the batting and bowling averages of the various members of the parties in all matches. Taking into account the immense amount of work that they have done it must be admitted that the form shown by this second Australian team has been exceedingly creditable. That they were able to beat the strength of England no one believed for a moment, but none the less the brilliant show they made at the Oval spoke very highly for their pluck, and were Spofforth able to help them they would have made a good fight at least at any time. Every one will be gratified that what threatened to be a rupture between English and Australian cricket was happily averted, and though the Colonials have even yet apparently failed to master some of the lessons necessary for a proper conduct of the game, it must be conceded that the general management of this trip was in every way superior to its predecessor. On Oct. 4 they dined with the Lord Mayor at the Mansion House and before eight o'clock on the following morning they left London for Brindisi, on their homeward journey. There is every chance, we understand, of another visit to England in 1897, and should some of the weak spots in the present team be filled by the substitution of men like Evans, of New South Wales; Massey, Moran and Garrett, the next lot will be sure to render a good account of themselves. By that time, too, perhaps cricket will have advanced sufficiently in the Colonies to permit the collection of an eleven able to play for their expenses only, if there should still exist the disinclination evinced by those who have already been over here to be regarded as professional cricketers. It is to their assumption of amateurism, accompanied with their exceeding keenness for money-making, that the Colonials owe the feeling that has been evinced against them in England.

A. H. Jarvis.....	10	5	12	0	...

W. L. Murdoch bowled in one match only—2 overs, 3 maidens, 1 run, 1 wicket.

—One of the most remarkably inaccurate cricket sketches ever published appeared recently in the London *Illustrated News*. The subject was the match between the English and Australian cricketers. The artist was evidently totally unacquainted with the game, as the position of the fielders was absurd. One of the umpires was represented as standing between the wickets and almost all the men had their hands in their pockets.

—The mild autumnal weather has favored the cricketers in the East during the past month.

—Now that benefit matches are the rage it would be well for the St. Georges Club to remember that Giles should have his turn before the winter sets in.

BOSTON vs. FALL RIVER.—Played at Fall River, Oct. 14, and resulted in a win for the visitors. Score:

GILES' COMPLIMENTARY TESTIMONIAL.—George Giles has been tendered a complimentary testimonial subscription, and we trust that all those that remember the record of this excellent player and man during the past seven years will give to St. George's list a hearty endorsement. As a cricketer, although no chicken, he is cock of the heap this season, heading the club's batting averages. In fifteen completed innings, including two not outs, 346 runs were the proceeds of his bat, or an average of 24 per innings. As a ground man Giles has no equal in this country, and his wickets are spoken of far and wide as where cricket can be played.

land. In England, after a day's shooting, all the covers are gone over with retrievers, and the "cripples," either birds or ground game, bagged by the keepers. In water retrievers we find a large variety of mongrel—Newfoundlands, setters, retrievers and spaniels, all mixed up together. Many of these crosses have produced wonderfully useful dogs. It is indispensable that all retrievers should have a tender mouth. 5. Yes. 6. There are plenty in the United States and Canada.

H. H. H., Fort Bayard, N. M.—Give your dog plenty of exercise, and a dose of sulphur each week. Feed carefully and not too much, and he is likely to come round all right.

W. K.—1. You should consult your physician as to best locality. 2. Cost of living in France is cheaper than in America, if one wishes to live moderately, but it depends altogether upon how one wishes to live.

H. B. D., Albany, N. Y.—Where can I obtain duck decoys in the city of Baltimore? Ans. Inquire of Clark & Snyder, 214 W. Pratt street, Baltimore. If they have none they will direct you to some reliable house.

H. C. C., New York.—We have heard of fine woodcock shooting at Sag Harbor, L. I. Take steamer W. W. Coit (fare \$1), Pier 25, East River, Tuesdays, Thursdays and Saturdays; or go by L. I. R. R. (to Wiggins' or Edwards').

H. L.—Have sent you the model, which will explain construction to your builder. You can vary from it to suit your ideas, but do not overlook the low low forward, intended to obviate "pounding," which would slow the game.

H. C. B., Central Mine, Mich.—I sent \$5 for a watch to the Union Manufacturing Co., of Philadelphia, Pa., and failed to get any reply save a promise that it would be shipped. Ans. We know nothing of the firm. Write to the Postmaster-General.

W. L. W., Sacramento.—I. We shall be most happy to hear from you in the way mentioned. The FOREST AND STREAM invites all its readers to report game notes and kindred matters of interest to the fraternity. 2. We should not recommend the rifle.

PORT TIMES.—I have a pointer bitch, not quite fifteen months old, that is now in season for the fourth time within six months. Is it not a very unusual thing, and is there any remedy for it? Ans. The animal is probably suffering from some local disease. Show her to a first-class surgeon.

MIGRATORY QUAIL, Chico, Cal.—If you are in earnest about the importation of quail next year, you will probably receive some help from those who have been active in making former importations successful. The birds, in some instances at least, have returned. Keep watch of our columns for news of them.

H. B. H., New Jersey.—Have you ever seen or heard of any pointers being pure lemon color? Ans. Yes, but not often. There was one at the Centennial Dog Show, and one at the New York Show, in 1879. Dogs of this color are rare. For shooting purposes their color is not a good one, as in the autumn they are very difficult to see.

H. B.—Would certainly advise a wheel for your 50ft. sloop. It is too hard work steering such boats with a helm. Will send you address of best maker. For W. C. write to A. B. Sands, 126 Beekman St., N. Y., who can ship you everything complete, so that any local plumber or carpenter can set up. Duty will be about 25 per cent., but it is well worth paying it.

A. G., New York City.—My Gordon setter puppy has had distemper, but had apparently recovered from it. At present she seems to have a great weakness in her hind quarters. She is eight months old. Ans. Give one-eighth of a grain of nuxvomica and two grains of quinine in a pill, three times a day. Keep her out in the open air. Give plenty of exercise.

J. L. Y., Nashville, Tenn.—My bitch has running sores in both ears, and it seems to grow worse. They seem to be far back into the head. I can see some of the necros very plainly. What shall I do? Ans. Your dog has internal cancer of the ear. See treatment

recommended "H. W. H." and "C. B. D." in Answers to Correspondents in FOREST AND STREAM, Oct. 7, 1880.

F. H. L., Rock Hill.—1. What can I give my three-months old puppy to produce an appetite? 2. How many inches at fore-shoulder ought my puppy to measure? Ans. 1. Exercise and good plain food, given at regular hours—presuming, of course, your dog is in health. 2. There is no standard by which the height of a growing dog can be regulated, any more than there is for a three-year old child.

W. S. S., Canton, Mass.—A few days ago I was shooting ducks from a boat with a friend, and had my pointer dog with me. We fired several times, and when we came off the pond my dog was stone deaf. Can anything be done for the dog? Ans. The dog will probably regain his hearing—that is, if he had it when taken in the boat. You neglect to state whether your dog was allowed to retrieve or not. Pointers are apt to become deaf from exposure and cold.

S. T. R., Circleville, O.—1. Where can I obtain the best and purest strains of Blenheim and King Charles spaniels, and Maltese and Mexican lap dog? 2. What do you consider the best work on the dog, embracing natural history, breeding and training? Ans. 1. For the first three varieties you had better send to England; the "Mexican lap dog" we have never heard of. 2. Vero Shaw's "Illustrated Book of the Dog," published monthly by Cassell, Petter, Galpin & Co., 596 Broadway, New York City.

W. G., Medford, Mass.—I send you an insect that I found among the feathers of a barred owl. While searching for more, one flew from the breast feathers and struck my cheek like a No. 8 shot. Another flew away and could not be captured. Can you give me the name of it; also, some particulars? Ans. The insect which you send is the partridge fly (*Olfersia americana*), of which so much has been written in our columns. We should be glad to give you particulars, but through lack of space must refer you to files.

W. S., Waterbury, Conn.—I want to get a good gun, and want it mostly to shoot with in the Adirondack mountains—one that will kill a deer at a reasonable distance, and also be good for shooting around home. 1. What gauge, length of barrels, weight, etc., would you advise? 2. Is the shooting quality of a \$75 gun any better than those of a \$60 one, or is the difference of price in the finish of the gun? Ans. 1. We would recommend for general shooting a 10-gauge, 8 to 9 lb. gun, with 30-inch barrels. 2. The two may differ only in finish.

M. H. B., Passaic, N. J.—Will you please inform me what is the best food for dogs two weeks preparatory and during the shooting season, to give them good, solid endurance? Also, whether crackers steamed and mixed with table scraps is good for regular food? Is it a good plan to put cinders in the kennel yard to harden the dogs' feet? In my inquiry I wish to except prepared food. Ans. Mush cooked hard is better than crackers to mix with table scraps. A dog being worked requires meat, and he should have larger feeds than when lying idle. Regular exercise is necessary for both man and dog before taking the field. The cinders are very good, if not sharp enough to cut the dogs' feet.

ANXIOUS, Baltimore.—Always unstep mast and unship bowsprit if possible. White lead both, trice up in loft for their whole length or lay on a floor, so that they will not lose shape. Protect partners, steps, etc., from weather. Stow sails away, after thoroughly drying, where rats will not get at them. Take out ballast, clean and whitewash hold. Block up clear of mud, protect all hardwood and deck fittings, and cover sunny side with burlap or matting, allowing for free circulation of air. Shore up well all around, and under counter, if long. Tally all gear and blocks. Smash all iron work, pins, etc., to preserve from rust, and line down all bright wood. Finally, visit often during the winter, and give an airing; sweep off snow, if not under cover; allow no leaks, if the seams open overhead.

A. D. E., Irvington, N. Y.—1. What is the size of the 200 yard range target at Creedmoor? 2. Is the plover a species of snipe? 3. Is it shot on wet, marshy meadows? 4. Do you think it would be

safe for me to purchase a broken setter at the auction sale of dogs advertised in your columns, i. e.: "Hitchcock & Hellyar's kennel draft, to be sold Oct. 27?" 5. Is the duck shooting on Long Island good now? 6. Do they shoot them from batteries? Ans. 1. All distances up to and including 300 yds.—bulseye, circular, 8 in. diam.; centre, 26 in. diam.; inner 46 in. diam. 2. It belongs to the snipe family. 3. Some species are shot on wet meadows, others on the myland and others on both. 4. We cannot recommend you either way. Some of the dogs to be sold are extremely good ones, but about others we know nothing. 5. Better later. 6. See game laws elsewhere.

NANTIC, Nanticoke, Conn.—Having for some years been an attentive and interested reader of the FOREST AND STREAM, I will take the liberty of asking you a few questions. When I first came up here striped bass were plenty, but, owing to a multitude of nets set by Long Island fishermen, they are yearly growing scarcer. Among the native fishermen but little can be done, but if one only knew how to set about it, perhaps our sport with rod and reel would not be entirely abolished. I therefore throw myself on your generosity, and ask for advice. A few good fish have been caught from the toll bridge, but so few and far between that it is rather discouraging business. I would also like to know why the fish take live bait up here when about New York waters shudder crab and lobster seem to be their favorite diet? I have heard many discussions on this subject, but desire some authentic information. Ans. We hardly know what advice to give you in reply to your first question, as you do not say whether the law allows such nets or not. The fish probably take shudder crab about New York in preference to live bait, because that is the food they are seeking; but when they reach your place they find more live food, and so take what they are accustomed to or learn by practice what food is in store for them.

## FOREST AND STREAM, A WEEKLY JOURNAL,

DEVOTED TO SHOOTING, THE KENNEL, THE RIFLE, ANGLING AND OTHER FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUTDOOR RECREATION AND STUDY.

Published by FOREST AND STREAM PUBLISHING COMPANY, Nos. 39 AND 40 PARK ROW (Times Building), NEW YORK.

### Terms:

Four dollars per year, in advance; two dollars for six months; one dollar for three months. Trade supplied by the American News Company.

### Advertisements.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Reading notices on editorial pages, 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted. We cannot receive new advertisements, nor alter standing advertisements later than Tuesday morning.

### Correspondence.

Communications intended for publication must be accompanied with the name of the writer, not necessarily for publication, but as a guaranty of good faith. Anonymous letters will receive no attention.

Secretaries of Clubs and Associations are invited to favor us with reports of their movements and transactions, and sportsmen and naturalists are urged to contribute to our columns their experiences and observations.

### Address:

All communications, of whatever nature, relating to the business or editorial departments of this paper must be directed simply

will serve a limited number of approved bitches.  
Send for catalogue. A few Claret-Collie pups by  
Rex, out of imported bitches, that is almost sure to  
make prize winners.

## W. M. LINDSAY,

446 Communipaw Ave., Jersey City.

Kennel at Elizabeth, N. J. Oct 21, 11

FOR SALE—The following stock from the best

stock in the U. S.:

Llewellyn setter Bitch, lemon and white, 18  
months old; a horse-shoe dog, loose broken, and  
ought to make a matter in the field; very obedient;  
his sire, champion Gladstone, is the best Llewellyn  
setter in the United States. State what you want  
and in-house-plant. E. & C. VON CULIN, P. O. Box  
21, Lakeview, Dover, Del. Oct 21, 11

Mark, deep mahogany red Irish setter, 18 months  
old; was in breaker's hands 6 months; fast, good  
nose and staunch; drops by motion of the hand;  
retrieves from water. His sire is imported champion  
York, and dam Floss, a prize-winner, and im-  
ported from Ireland from the kennel of Miles Dwyer.  
Price, \$50.

Gordon setter bitch—a beauty; color, black and  
tan; whelped, January, 1890; hunted last fall of  
quail and grouse; staunch, fast and good; keen  
nose; has had one litter of pups. Price, \$50.

Fannie, red Irish setter, well feathered, good  
head and beautiful all over; very fast, good nose  
and very staunch; will stand as long as you want  
by speaking to her; does not know what a hare is.  
Just served Oct. 17 by King Bee, a red Irish setter;  
can hunt most of fall, and then have a fine litter  
of pups worth three times amount paid. Address by letter,  
quail, etc. Price, \$50. A bargain. H. B. VONDER-  
SMITH, Lancaster, Pa. Oct 21, 11

J. Stevens & Co. have nearly doubled the capacity of their works, and for several months have been obliged to run the factory at night to meet the increased demand showing that the SOUTHWEST AND BEST SHOOTING ARMS IN THE WORLD, when sold at such moderate prices, will force their way into favor without the aid of elaborate puffing or paid shooters.

Send for illustrated price list to  
CHARLES FOLSON,  
166 Chambers Street, N. Y.

DEALER IN  
Fire-Arms, Ammunition, and all Articles connected with the same, and sole Agent for

J. Stevens & Co.'s Celebrated Arms

WARREN, Conn. Sept. 17th, 1877.  
GENTLEMEN:—The little 28 caliber rifle you sent me on the 5th inst. is all right in every respect. In a trial here last Saturday on our 300 yard range I used it against the Wesson, Maynard, Henry, Sharp and Remington, and five of the Billings and four of the Williams muzzle loaders, and did not have to take the second place for any of them, although I was tied by one which has here before been the "boss." Yours truly,  
H. W. LYFORD

### J. & W. TOLLEY, BIRMINGHAM, ENGLAND.

MAKERS OF FINE GUNS ONLY.

Lists Mailed on Application.

Terms, cash with the order, which can be shipped in six weeks from receipt of the order.

### THE PERFECTION HAMMER, OR— Hammerless GUN.

PRICES:  
\$80, \$100, \$125 and \$150.

The side stud shown in the above illustration is thrown out on the left lock plate in opening the stud, and which projection of the stud shows that the automatic bolt has interposed itself between the hammers and the plungers. (The only perfectly safe mode of bolting the gun to prevent a premature discharge.) When about to fire press the stud on the left lock plate home, which unbolts the gun.

The above prices are for guns at the Works. The extra cost for delivery in New York will be: On guns costing at works less than \$100, \$6.50; those costing \$100 and upward, \$11.50. The gun at \$150 is fully equal to the finest guns imported.

AGENTS FOR CARL'S NEW DOUBLE REVOLVING TRAP.  
Howard's Steel Head Shells—Quality guaranteed. Price lower than any other.

### REMINGTON'S MILITARY, SPORTING AND HUNTING REPEATING RIFLES.

KEENE'S PATENT.

P. O. BOX 3,994.

Simplest, Most Efficient, Indestructible. Adopted by the U. S. Government in the Navy and Frontier Service. 10 Shots, .45 Cal. 70 Grain Standard Government Cartridges. Prices: Carbines, \$22 Frontier Rifles, \$22; Sporting and Hunting Rifles, \$25. Discount to the Trade Only. Send for Catalogue and Price-Lists. E. REMINGTON & SONS, 283 Broadway, N. Y.

### THE FOX GUN! Special Announcement.

THE MANUFACTURERS OF THE "FOX" GUN, FEELING THAT DEALERS, as a general thing, have not done justice to the merits of this WONDERFUL GUN, are determined to have them placed before sportsmen more generally, that their great merits may become better known and appreciated. It is needless to speak of the ELEGANT WORKMANSHIP AND WONDERFUL SHOOTING POWERS of these guns. It is a fact well established that they are UNSURPASSED BY ANY IN THE WORLD.

We propose for a limited period to offer a line of these guns at the following EXTREMELY LOW PRICES, after which the original prices will be restored, our object being to introduce the guns into sections of the country where dealers have failed to present them; in the firm belief that where they become known they will be the established favorite, and we shall reap the benefit in future of this great sacrifice.

Such Inducements Have Never Before Been Offered.

Sportsmen wishing to purchase one of these beautiful guns must respond at once, as the number offered at these prices is limited.

Twist Barrels.	12 or 10 Gauge.	Pistol Grip, Reb. Locks.	FORMER PRICE.	NOW.

TRADE "BEATS THE WORLD." MARK.  
**Old Judge Smoking Tobacco.**

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely: The Oil of Crocote. CHARLES G. EMBURY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 5th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOR and the injurious effects of the Oil of Crocote are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and is thus demonstrated by the first "OLD JUDGE" Cigarette they smoke. Sold by all leading dealers. Try them, and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water st.,

FFG and FFFG. The FG for Long Range Rifle Shooting, the FFG and FFFG for general use, burning strong and moist.

**Sporting, Mining, Shipping and Blasting Powders.**

Of all sizes and descriptions. Special grades for sport. Cartridge, Musket, Cannon, Mortar and Mammoth Powder, U.S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.  
N. B.—Use none but DUPONT'S FG or FFG Powder for Long Range Shooting.

## The Hazard Powder Co.,

MANUFACTURERS OF

## GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for quail or brace loaders.

Hazard's "Kentucky Rifle."

FFG FFG, and "Sea Shooting" FG in kegs of 25, 12, and 6 lb. and cans of 5 lbs. FFG is also packed in 1 and 4 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

88 WALL STREET, NEW YORK.

### THEY FAIL TO REPLY.

THERE was received at this office, September 29, the following communication:

NEW YORK, Sept. 29, 1880.

TO THE EDITOR OF FOREST AND STREAM:

Your article in the last number of your paper has been called to our attention, and upon perusing it, we find that you propose in your issue of this week to publish a further exhibit of matter of alleged affiliation, as a sequel to the interesting contribution to the literature concerning the Dittmar Sporting powder, which appeared in your issue above quoted.

We suppose that a sense of insecurity impelled you to intimate in the article that the columns of your paper, which therefore (as you say) were open to us for explanations, would be henceforward closed, but being nevertheless convinced that, notwithstanding your enmity to our company, for reasons which we shall at length hereafter explain, you will not defy public opinion by permitting an invention of great public utility to be libelled and defamed in your issue, without giving us an opportunity to reply.

We shall reserve our answer to both your article and to Mr. Squires' letter, until the full extent of your charges are made known as promised. We desire however in order to avoid all misconceptions to unqualifiedly deny in advance of our extended answer, each and every statement in substance made in the article above referred to derogatory to the Dittmar Sporting powder.

Very respectfully yours,

DITTMAR POWDER MFG. CO.

This letter could be only one of two things. It was either what it purported to be, a notice given us in good faith by the Dittmar Powder Manufacturing Company (No. 2) that they had a genuine extended reply which they were really about to send to us, or else, having no such reply and being in desperate straits, they put forth this flat denial hoping that it might produce whatever effect attaches to bravado and bluff.

We accepted the more charitable of the two admissible constructions; and awaited the promised reply.

The occasion certainly called for an immediate and explicit answer from the manufacturers of the "Dittmar Sporting Powder." The "full extent of our charges" respecting that compound, as published September 23 and supplemented the week following by "a further exhibit" of most decided and unmistakable "affiliation," were of the gravest possible nature. They directly affected the public estimation of the powder, and unless contradicted at once, must, as the event has proved, seriously injure the sale of that product. The business interests of the Dittmar company were at stake. To preserve those interests a satisfactory and immediate reply was imperatively demanded. Under such circumstances it is incredible that, if anything could be adduced by them to disprove or offset our statements, it should be withheld from the public a single day.

We have waited five weeks. The "extended answer" has not come.

Instead of furnishing within this time any reply at all, the Dittmar Powder Manufacturing Company (No. 2) have, at so late a date as October 23, published their letter of September 29, prefacing it in a New York paper with the remarkable explanation that it had been sent to

"the Editor of FOREST AND STREAM as a preliminary answer to the hedge-podge literature on Dittmar powder published in their columns, which is the outgrowth of spite, revenge and ignorance, and intends to scare all those readers which" [sic] have no thorough knowledge of different explosive compounds."

We submit that a full month was sufficient time for a more adequate answer to "the hedge-podge literature" which was "the outgrowth of ignorance."

With the exception of this exhibition of pitiable bravado, the Dittmar Powder Manufacturing Company (No. 2) have given to the public not one single syllable of reply to the facts and logic presented by the FOREST AND STREAM. Their silence can be construed only as the unwilling confession that they have absolutely nothing to say.

The letter of September 29, we are forced to conclude, was not sent to us in good faith as a notice of a forthcoming explicit reply. It was bluff.

As such, it was a fitting sequel to the long story of previous

\* Each of these communications contains the best of internal evidence to conclusively prove that it was written in haste, if not in a passion. Upon no other theory can we account for a failure to emerge from the mazes of the second sentence of the Sept. 29 letter; nor for the extraordinary use here of the neuter pronoun.

denial and evasion already recounted by us, and as such it certainly calls for no extended consideration here.

We do not wish to prolong the discussion of the "Dittmar Sporting Powder;" the FOREST AND STREAM is not warranted in taxing the patience of its readers by dwelling upon dead issues.

In closing the subject we submit the following propositions, made with all possible brevity and clearness:

1. The question of the safety of the nitro-cellulose explosive compound styled "Dittmar Sporting Powder," is one which directly concerns the life of every man who may be induced by the representations of its manufacturers to use it. That each man so concerned may draw his own conclusions it is necessary that he should have the facts in the case, and all the facts.

2. The FOREST AND STREAM has presented the facts. The public, from Maine to Mexico, has from these facts drawn its conclusions. The evidence has been submitted. The verdict has been passed.

3. Wholesale denials, unsupported by facts, cannot alter that verdict.

4. One of "the statements in substance \* \* derogatory to the Dittmar Sporting Powder," was that of Mr. Carl Dittmar himself, and was made under oath. Something more than the unqualified denial of the Dittmar Powder Manufacturing Company (No. 2) will be required to induce the public to believe that Mr. Carl Dittmar under oath perjured himself.

5. We did not say, nor intimate, that our columns would be henceforward closed to reasonable explanations from the Dittmar company. We reserve the right at all times to decide what shall, and what shall not be printed in the FOREST AND STREAM, and we will never knowingly permit anything to appear in these columns which is intended to deceive our readers or to conceal from them the truth.

6. The editor of this paper has never had the slightest acquaintance, good, bad nor indifferent, with any one of the present manufacturers of the "Dittmar Sporting Powder." In writing and publishing the articles on the powder he distinctly disclaims having been influenced by any other motive than a determined resolution to get to the bottom of the subject, and then to publish the truth, fully, clearly and without fear. The charge that any one of these articles, or any single sentence in them, was inspired by "enmity" is ridiculously and maliciously false.

7. If an invention has been libelled and the libel can be proved there are certain well-recognized and approved courses of action whereby redress may be had for injury sustained.

GOOD WORDS IN HARPER'S.—The November Harper's contains a very readable along-the-shore article, entitled "Saline Types," which treats of people and things about which little is known by the general reader. It winds up with a few telling sentences on the rapid destruction and driving away of the water-fowl of the south shore of Long Island, and urges that steps be taken to protect these birds. The importance of some such action is becoming each year more pressing, and thoughtful sportsmen should turn their attention to this subject before it is too late.

In a revision of the New York game laws, such as is proposed by Mr. Crook, provisions protecting ducks and geese on their feeding-grounds and limiting the shooting to certain days of the week would, we think, receive the approval of most far-seeing men. Harper's says:

All along the Atlantic Coast the modern sportsman has introduced vicious methods. He is rather a persecutor than a hunter of wild fowl. His decoys lure the bird by day, and they are used to such an extent that the duck and wild geese with difficulty find a "sanctuary." At night the persecutor pursues his illegitimate sport under cover of darkness. "Blinds" also are resorted to in the daylight. In consequence of this devastation (in defiance of the game laws) the wild fowl is fast disappearing.

A WORD TO OUR READERS.—Every reader of the FOREST AND STREAM is requested to send us the names and addresses of such of his friends as are interested in field sports, but who are not among our subscribers. To all such we will send free specimen copies.

THE GAME LAW.—We hope that all who are interested in the New York Game Law will give the digest published in our columns last week their immediate attention, and communicate any suggestions they may have to offer to Mr. Crook.

## FOREST AND STREAM.

NEW YORK, THURSDAY, OCTOBER 28, 1880.

\* \* The FOREST AND STREAM goes to press Wednesday. Correspondents are requested to mail their communications so that they may reach us before that day.

A BOOK FOR EVERY SPORTSMAN.—We cannot too highly commend to the attention of all those readers of this paper, who (or "which," if you please) have no thorough knowledge of explosive compounds, the purchase and reading of Prof. J. P. Cooke's "The New Chemistry," (Appleton & Co., New York, \$2; or sent post-paid by us for the same price). We happen to know that many of our subscribers, among them the Fire Marshal of the city of New York, have upon our former recommendation, read the book with interest and profit. It is an admirably clear presentation of principles with which every man who uses a gun should be familiar.

PROF. MAYER'S EXPERIMENTS.—We take much pleasure in publishing to-day the first and only correct report of Professor Mayer's experiments to determine the velocity of shot. A garbled report was published by a Boston paper, and has been extensively copied, absurd typographical blunders and all, and many criticisms have been offered respecting statements that Prof. Mayer was alleged to have made, when in reality he had never said anything of the kind. The FOREST AND STREAM has received the article directly from its author's own hands, and the proofs have been submitted to him.

We need not dwell upon the practical value of these experiments, nor to the thoroughly able manner in which they were conducted. The article deserves and will receive careful study.

—The number of correspondents who contributed to our columns last week, including, also, those whose inquiries were answered, aggregated a total of more than 120, and represented twenty-six different States and Territories.

## The Sportsman Tourist.

A TRAMP AFTER TROUT IN COLORADO.

THE Doctor was in camp in Estabrook Park on the Denver and South Park Railroad, which, at present, runs from Denver to Leadville. The small station-house is fifty-two miles west of Denver and stands near the north fork of the Platte. The north fork and the south fork of the Platte form a junction with each other ten miles below Estabrook, at a station called Buffalo, constituting quite a mountain stream, which, after dashing headlong over and around immense boulders, forming many charming pools and fouling cascades, and forcing its way for ten miles through the picturesque cañons of the Platte, emerges upon the plain thirty miles above Denver and, after flowing northward and irrigating the numerous ranches en route, furnishes water to that thriving, bustling, beautiful young city. The Denver and South Park railroad follows the banks of the Platte to its source, taking up the north fork after reaching the junction. The scenery through which it passes, especially from the point where it enters the mountains to Estabrook Park, is perhaps equal in beauty and grandeur to any of the far-famed scenery of Colorado. The Platte cañon is decidedly attractive. The only drawback to a delightful ride through it is the fact that the road, following the various and often sudden crooks and turns of the river, keeps the cars continually on the swing, and fully one-half of the passengers, especially on the downward trip, get seasick. In many places the mountains come down abruptly to the very brink of the river and the road bed has been blasted out of the sand rock. Half of the time it appears that the road terminated within a hundred yards both behind and before you, so very crooked and narrow is the gorge.

One Saturday morning early in August last the Madam and I boarded the regular train for Leadville, taking with us the five-year-old, and ran up to see the Doctor. He met us at the depot and escorted us up to his tent near that of Mrs. Kimer. The Denver and South Park Railroad was built for the purpose of their health and with whom the Doctor took his meals. The Doctor was an invalid himself and spent his time principally in eating, sleeping, drinking in the glorious air, and whipping the river for trout. The park was a lovely little strip of table lying along the river on the south, carpeted with mountain grass, backed up by a forest of pines stretching away up the gradual mountain slope, with the more irregular and abrupt peaks across the river to the east. Several families from Denver were out here living in tents. The Doctor was on the edge of the pines overlooking the narrow plain, the sparkling river, the railroad and the enchanting scenery beyond. The Madam was so infatuated with the place before she had been there two hours, and after seeing how snugly people may live in tents, that I became apprehensive I would have to part with her and leave her in the park. The dinner served up to us at five o'clock was devoured with a keen relish, not the most insignificant part of which were a dozen or so of trout captured by the Doctor that very morning. On our arrival he told us he had been trying his hand with moderate success, but that a heavy rain up on the headwaters of the river had sent down murky water and in a measure cut off the sport. Still, as I wanted to try my hand, we got our rods and walked down to the river. I don't fancy telling it, but as truth is said to be stranger than fiction, I will record the fact that we both used the worms for bait instead of the flies. In the existing condition of the river at that time we might have expected that our fly arms and backs ached and had only those aches for our pains, but with the worms we were enabled to add one each to the morning's catch. During our operations a mountain shower came up, but the Doctor's big umbrella covered us both and enabled us to prosecute the sport.

"They tell us," said the Doctor, as we sat at the table at dinner, eating as though our hotel at Denver had been keeping us short and scarce, "that the trout are better here in Goose Creek just above its junction with the south fork of the Platte, and a party of us are going over there next week. We want you to join us. We are going next Tuesday, and if you will say you will go along we'll wait the arrival of the train and have some means for your conveyance. We are told it is seventeen miles distant and we think we can get there after the train comes in and fix a place to sleep before night."

"What could I say to it but promise to join them at the appointed time? So, after receiving a few small commissions to fill, such as buying a few flies, some canned goods and laying in a supply of worms (the latter of which can be had in all Colorado only in Denver), the Madam, the five-year-old and I boarded the down train at seven o'clock and were soon turning and twisting and grinding our way down the tortuous road, and before we reached the plain two-thirds of the passengers were sick. The Madam had taken charge of the five-year-old, who soon started us with the remark, "Ma, my head feels so funny!" and directly afterward found relief in slumber. It was not long thereafter when the Madam herself was stricken. Turning to me with a look with which I became familiar in a rough ocean voyage not a thousand years ago, she said, rather sorrowfully, looking down at the little sleeper, "You'll have to take her. But raise the window first. I'm sick!" None of the sick ones found relief till we got out upon the level plain and sped away smoothly and rapidly for Denver, which we reached at half past ten that night.

At noon on the appointed day I stepped off the train at Estabrook Park and was greeted by the smiling face of the Doctor. "We are all ready," said he, while shaking me cordially by the hand. "Over yonder by that slab-house you will find Mr. Higginson waiting for you with his wagon. Mr. Holme and I will ride horseback." On my way over to the slab-house I fell in with the Dean, who had been somewhere down in southern Colorado attending to the interests of his Church and who had come up from Denver on the same train with me. Higginson and I were urged to lunch with him before starting on our journey, an invitation quite acceptable to me, as my appetite was already beginning to get the better of me. "What they termed lunch proved a real good dinner. As soon as it was dispatched we packed our supplies into the wagon and, taking a spring sent by the side of Higginson, we started across the mountains, the Dean mounted upon a tough broncho, while the Doctor bestrode an ancient, ravenous horse, born and bred in the mountains, and which could follow a trail with the accuracy of a deerhound on a fresh scent. The road, for the greater part of the journey, was quite rough, and occasionally the men in the dog-cart, which we soon overtook, and I had to foot it. Seven miles out we came to Higginson's ranch. The place was a small valley on the upper edge of a little valley nestled down among the towering mountains, recently purchased by the owner on his arrival from England, and occupied by himself, mother and sister. They were cer-

tainly comfortably situated, but not greatly troubled with neighbors or visitors. After a slight rest, and partaking of a goodly supply of ice-cold fresh buttermilk, we continued our journey five miles further to Mr. Webster's ranch, where both road and civilization terminated. It was then five o'clock. After unloading our traps, Higginson returned to his home. Webster and an old man in feeble health, who had charge of the house and did the cooking, were at home. Webster offered us shelter for ourselves and grazing for our animals, advising our remaining with him over night, saying there was no special trail out to Goose Creek, and that we might not find it alone, but that if we would defer our journey till morning he would escort us part of the way. He said the distance was five or six miles. So we voted to stay there all night and make an early start in the morning. After broiling our meat and making some coffee on the stove, and chatting with Webster till far into the night on the chances, among other things, of the success of our expedition—of which he was by no means sanguine—we all piled down on the floor, and soon fell asleep. Two of our host's herdsmen had come in after a long tramp "rounding up" cattle, each bringing with him a large supply of blankets and buffalo robes packed on horses, separate from those they rode, and this bedding they turned over to us, which, added to our own stock, made the night on the floor fairly comfortable. The Dean found the naked McEllellan, a slender fellow, for a pillow, a pair of new, soft overalls, belonging to one of the herdsmen, when rolled up, served my purpose admirably.

We were up betimes next morning, and got our simple breakfast. The Dean and I started out afoot in advance. He carried a carbine in the hope of seeing a deer, but came no nearer a shot than seeing some fresh tracks. Such a walker! He kept me at the top of my speed all the time, my wind coming to a standstill at the perspiration rolling off me. When I would beseech him to moderate his gait, he would declare he thought he was walking very slowly. I had seen Englishmen trudging up and down the mountains of Switzerland, and was aware they were good on foot, but I had never had such a realizing sense of it before. The horsemen soon overtook us, accompanied by Mr. Webster. We went down this gulch and up that one, crossed spurs of mountains here and there, until, a mile and a half out, we came to a great ridge overlooking a vast stretch of level country, with the level of Peak sixty miles south of us, but really appearing ten or twelve miles at farthest.

"We will stop here," said Webster, "and I can point out the way. Make for those naked bluffs you see yonder. That dark line you see below us is Wigwam Creek. This valley to the left leads to it, and you cross it. After crossing, bear off to your left at an angle of about twenty degrees, and go upon the ridge; follow the ridge, and you will come to the level of Sand Gulch; turn to your right and go down that about half a mile, and you will strike a beaver dam on Goose Creek about half a mile from its mouth. But—"

"Hold on, Mr. Webster," cried the Doctor, who had been so enchanted with the panorama spread out before us that he had not heard a word of the directions, "go over that again, so we may all understand it. We don't want to go meandering about and lose our heads."

And Webster carefully detailed the route, so it was plain to all of us, and then bid us good morning. We had no trouble in following his directions, but found the distance at least eight miles instead of six. We reached Goose Creek at half-past eight o'clock, and the first signs of life, save an occasional grasshopper, that greeted our vision were some kingfishers flitting up and down the little stream.

There are here, I explained, overjoyed at the tiresome journey we had taken, and feeling sure these birds would not be about unless fish were present.

By nine o'clock we had the horses picketed out on the grass in the narrow valley, and were trying our hands with the trout. The Dean and the elder Mr. Holme were both expert fishermen, and turned up their noses at worms. They used all flies, of course. The Doctor and I compromised by putting worms on the lower hook and a brown hackle or other soft fly above. The Dean and I, the older Doctor and I, having but one basket between us, going together and bringing up the rear. Of course we fished over their ground and within half an hour after them. Holme was the first man to wet his fly, and he had barely wet it ere he was sung out, "First blood!" holding up a three-quarter-pound trout. From that on till we reached the Platte, barely half a mile distant from camp, it was a regular war of wits, and the older Doctor and I caught comprised two at once, one on each hook, an experience every member of the party had that morning. Only a few, but those all large, rose to the fly in the Platte. Owing to the river entering an impassable cañon just below the mouth of Goose Creek, we could not give the Platte a fair trial. But we were satisfied with the creek. We returned to camp a little before noon, cleaned our fish, hung them up in the grass in baskets, and prepared our dinner, for which we were about as hungry as when we started. We had taken 108 trout, some of them weighing over one pound, and not counting the smaller ones thrown back into the stream.

After dinner and a good long rest the younger Holme, the Doctor, myself and the elder Holme, in the order named, went up stream, while the Dean went down, returning early to prepare camp for the night, and bringing with us, as the result of the afternoon's work, 144 trout. We were all very tired, but the work was not over yet. The Dean and I went to sleep on foot. The banks of the creek were precipitous, often with great boulders as large as a house, and as none of us had wading boots, we were frequently compelled to leave the stream and make our way along the rugged mountain side in order to reach it in another place. That night we made our bed down on the sand, under a big pine, with a roaring fire at our feet, which was kept going by Holme, who, sleeping on the outskirts, got cold every hour, and was compelled to get up and stir the fire.

The next morning Holme, the inept fisherman, started alone at five o'clock to make the railroad at noon to meet some friends en route for Leadville. We filled him before he started with a nice hot breakfast, loaded his horse down with two big baskets of trout, and gave him our benediction. Soon after this the others were devoting their attention to the trout. This attention was continued till near nine o'clock, when we determined to return to camp in order to get up a supply of fish this time 103 trout. The entire time devoted to fishing was a little over nine hours, the total result being 355 trout. Of these the writer led with 97, followed by the Doctor. I am certain that the Doctor and I would have done better if toward the close our worms had not given out and driven us to rely solely upon flies. During the use of worms we captured one trout with the fly to about seven or eight with the hook baited with a worm. It was an unprofessional way of fishing, but the silly mountain fish seemed to like it, and we were disposed to humor them.

As I had to foot it back to Webster's, and the Dean was too much for me on an even race, I could not do so, and so I got it alone and took my time, and I did make it. I did well enough up the Sand Gulch and along the ridge, but I lost the turning-off place to go down through the pines to Wigwam Creek, and became confused over certain penks I had marked in my mind the day before. I had gone so far I was fearful the horsemen behind me would not pass that way, and I made for the creek at a venture. I struck it in a straight and well looking place, without anything to indicate whether I was above or below the crossing of the day before, which I had marked by thoroughly blazing with a hatchet a young aspen tree. I walked up the bank of the creek where walking was specially bad half a mile, and finding the country growing wilder, retraced my steps and went down, growing more nervous and uneasy every moment. I was without a coat and without matches, and feared all night in the mountains. Once or twice I caught myself nearly in a run. But finally I saw the blazed tree, though it looked like some other tree, and I could hardly believe my own marks. But here were the prints of the horses' feet at the crossing, and I plunged over, and from that on I stuck to the fresh tracks like an Indian. I was particular to step right in them, and I would not deviate from them two feet, even to cut across a sharp turn. Even when I reached the branch that I had indicated by Webster's house I could not feel sure of it, and the sight of his house across the green pasture, as I emerged from the pines, was certainly very gratifying to me. I got in an hour ahead of the rest of the party, about exhausted. When they came up we had lunch, and started for the railroad. Having but two horses, three of us rode on the one seat in the dog-cart, with traps piled up to our eyes, and strapped all around us. There was very much of the "ride and let it out" in it, and all three were slow. At Higginson's we took a horse, more buttermilk and borrowed another horse. From that on to the railroad we went flying, arriving at dark and finding a nice warm supper waiting us at Mr. Holme's tent, presided over by his accomplished daughter.

I think our luck was exceptional. Trout are not very abundant in Colorado and only offer great sport to the angler in remote places. Every stream easily accessible to the tourist is full of them, and as one which is made up of many streams in the State I heard of no such catch as ours or anything approximating it. Some parties who went over to the same ground on our "say so" had indifferent luck.

Vicksburg, Miss.

## PANAMA—"THE PLACE OF MANY FISH."

IF I have not been misinformed, the old Indian word Panama means "The Place of Many Fish," and for once an appropriate name has been given. Had it embraced the word "educator," perhaps it would have been better, for of all fish Panamanians are by far the best educated to make a man course education in the abstract. Of course there are the usual exceptions.

Fancy, if you please, casting your well-baited hook in the midst of a dozen or so of magnificent corbennes, averaging ten pounds each, with half a dozen skip-jacks of good size loitering about on the outside, and witness the manner in which they receive your attentions. In the first place they will dart at the hook in such a manner as to make your net jump, but as they appear so ready to strike, a slight movement of the tail swerves them aside, when they lazily examine and investigate; then they quietly sail in a circle around the bait, until they feel the line touch their backs, and then it is good morning to corbennes. You may coax and play sweet on them, but they graduated some time before you came into the country.

And what a beautiful fish they are! as red as a goldfish, or dark brown, according whether they be the red or black variety, and several inches across—in fact, they frequently appear disproportionately broad. When served on the table the flesh is white, and as solid as a Columbia River salmon.

With skip-jacks you can enter the plea of "sour grapes," for they are scarcely worth the trouble of catching, as they are only good for chowder. Should you want fun you would get plenty, providing, of course, you hooked one, for they make a lively and are good to the last. Hold the stick, and skip-jacks are game fish, and as ravenous as our Northern bluefish.

The natives are generally too tired to fish, although big prices are obtained in the market for all kinds. I witnessed a singular scene not long since. For some time I had noticed a boat cruising about in the harbor, which finally stopped, and while one man attended to holding it steady by means of the paddle, the other was busy with a line of gyration through the water, first to the right, then to the left, and finally in a circle, gradually nearing the vessel on which I stood. The fisherman had meanwhile readjusted his equilibrium, and had eyes for nothing but the motor propelling his boat. The native who sat in the stern with the paddle had just all he cared to contract for to come in on the short turns, and the way that boat walked through the water was an interesting lesson to steam yachts. After traveling about the bay for about ten minutes the line was hauled short, and the death stroke given with a lance, and as handsome a corbena was hauled into the boat as I ever saw. He must have weighed nearly forty pounds. I did not suppose they grew to such a size, but was assured that even larger ones had been captured. The harpoon used was a two-pronged barbed instrument, the wooden handle fitting into an iron socket, and just at the socket the line was attached to the iron.

When the blow was dealt, the line was hauled short, and the death stroke given with a lance, and as handsome a corbena was hauled into the boat as I ever saw. He must have weighed nearly forty pounds. I did not suppose they grew to such a size, but was assured that even larger ones had been captured. The harpoon used was a two-pronged barbed instrument, the wooden handle fitting into an iron socket, and just at the socket the line was attached to the iron. When the blow was dealt, the line was hauled short, and the death stroke given with a lance, and as handsome a corbena was hauled into the boat as I ever saw. He must have weighed nearly forty pounds. I did not suppose they grew to such a size, but was assured that even larger ones had been captured. The harpoon used was a two-pronged barbed instrument, the wooden handle fitting into an iron socket, and just at the socket the line was attached to the iron.

We were lying about two miles off shore to-night, and just now, while writing this, I was disturbed by a noise, and for a moment thought one of the cattle had by some means got aboard, for it sounded exactly like an exhausted animal puffing and blowing; it proved to be a large school of porpoises or blowfish, and they were blowing and blowing, and it proved to be a very large number, and reminded me of a herd of excited hogs, their blowing sounding very like it.

We are not destined to go without fish because two or three varieties know more than we do; for on yesterday we took two

less than seventy mullets while fishing off the steamer's deck. These fish run in schools, and will average two and a half pounds each in some schools and in others they are smaller. Generally they are equal in size throughout the entire school. We fish for them with trout hooks, baited with dough mixed with enough cotton to toughen it. The fish sucks the bait, not striking it as in the manner of gamefish, but they make an interesting play after being hooked, for they are extremely rapid in their movements, and a man with a good, light rod could take a pleasant hour or two. As the fish remain very near the surface and their motions are at all times visible, a person gets very much interested in witnessing the way in which they hook themselves; and yet it soon grows tiresome, for the story gets old and excitement cannot be maintained for the average fisherman. I have seen corbennes caught, but never except by throwing over a lot of waste meat, bread, etc., and casting in their midst.

One would suppose the fish would diminish in numbers owing to the immense number of sharks and pelicans. The latter, in flocks of from a dozen to a hundred, go out to sea each morning and return just before sundown to their roosts on the islands in the bay; or, when the fish are inside the reef, these birds can be seen gorging themselves for hours together. How they utilize the numbers eaten would puzzle a philosopher. I saw one bird devour twenty-seven mullet, by actual count, and it wasn't a very good day for pelicans either.

It seems like a singular statement, but the jumping and splashing of the fish about the vessel during the night quite frequently keep me awake, the water seeming to be fairly alive with them. They evidently come in on the flood tide, and perhaps seek the surface in such vast numbers owing to the absence of their natural enemies, the pelican and the man-of-war hawk.

Should you desire to take a trip into the swamp with me after monkeys, parrots, snipe, toucans, ducks, tigers and deer, I may accommodate you in another letter.

Panama, U. O. Columbia. DR. J. O. SWAN.

## Natural History.

### THE QUESTION OF SHARKS SWALLOWING THEIR YOUNG.

IN a recent issue of FOREST AND STREAM an account of the finding of several young sharks in the stomach of a large female by Mr. E. G. Blackford, of Fulton market, was given. This article was extensively copied, and the general impression seemed to be that the young had been taken in for protection.

Knowing how little is known about sharks in general except stories of their voracity by sailors and details of their structure by zoologists, and that, although they bring forth their young alive, their character for gluttony was such as to make it appear strange that they should care for any living thing which they could either swallow or bite in two, we were interested in this incident. Awaiting a favorable opportunity we interviewed Mr. Blackford, who told us that he bought the shark because it looked big and strange, and that he had no use for such a beast except the interest which heavily takes in all such creatures, that is, to learn their habits and find out how they live and what they eat. He ordered a man to open it and if anything unusual was found to bring it to him. The fish was the "mackerel shark," *Isotropsis delicata*, Gill, and contained ten young ones, each two feet long.

Our informant understood that they were in the stomach of the fish, but to make sure of this we now have the facts from Mr. Blackford, who says that the man only brought him the young and said they were from the stomach, but that he did not believe he could tell the difference between the stomach and the womb, and that, as the young sharks appeared fresher than the old one, he thinks that they had never been born. This certainly seems to be the most reasonable to any one who knows anything of the habits of sharks, or of the swift action of their digestive apparatus, and, as we before stated, there was no mark upon the little ones to show that digestion had begun, even to the removal of the mucus upon their skins. So for this case does not prove that sharks swallow their young for protection.

### THE MOLLUSCA OF RIVERDALE, NEW YORK CITY

WITH NOTES.

THAT portion of the Twenty-fourth Ward of New York city in which the following shells were collected is bounded North, by the south line of the city of Yonkers; South, by Spuyten Duyvel and Kingsbridge; West by the Hudson River, and East by Central avenue, covering in all an area of about four square miles, and is a rough and rocky district. There is one large pond (Van Courtland Lake) and several smaller ones; several brooks, of which Tibbet's is the largest. A few empty into the Hudson, but the greater number into Tibbet's Brook, that into Van Courtland Lake, that again by a continuation of Tibbet's Brook into Spuyten Duyvel Creek. The shores of the Hudson River adjoining this district are usually sandy beach, beyond, mud and stony bottom, with occasional celt grass.

*Mya arenaria*, Linn.—Very abundant in the Hudson between tide-marks; young are taken from early spring till late of June.

*Macra lateralis*, Say.—A very common shell in the Hudson between tides. Our specimens are much smaller than those taken on Long Island or in the Harlem River.

*Tellina fusca*, Phil.—Very common in the Hudson between tide-marks, but small, the pink variety not so common.

*Sphaerium punctatum*, Say.—In all still water ponds very common.

*Sphaerium sulcatum*, Lam.—Found in Van Courtland Lake and Tibbet's Brook. Of specimens collected in August few were adults. Very common.

*Pisidium abditum*, Held.—Rather common in Odell's Pond. Often found attached to leaves of water plants and floating sticks.

*Pisidium equilaterale*, Prime.—Found in small mud holes. Very rare.

*Pisidium compressum*, Prime.—Odell's Pond, common.

*Unio complanatus*, Sol'd.—Small in Tibbet's Brook, with bluish white nacre. In Van Courtland Lake large, with pink, salmon, blue and white nacre. Very abundant in both localities.

*Mytilus plicatulus*, Desh.—One-half valve only found on the Hudson, at Tibbet's Dock. No doubt carried from Spuyten Duyvel Creek, where it is common.

*Ostrea borealis*, Lam., and *var. costata*.—In Hudson very common, but small.

*Mytilus arboris*, Say.—Side hills in shady woods under sticks and bark; also on the borders of swamps, under sticks, etc. Very abundant.

*Mytilus indentatus*, Say.—On side hills in woods only, under stones and leaves. Not so abundant as the last.

*Penduloglypta uncinata*, Binn.—In rotten stumps, generally near streams. Not rare.

*Conus fulva*, Drap.—In rotten stumps, under leaves, etc., in shady places. Rather rare.

*Helicostoma lineata*, Say.—Generally in rotten wood near water, but have taken it in dry situations. Moderately abundant.

*Limax agrestis*, Linn.—Under bark of logs near water. Very common and of large size.

*Limax campestris*, Binney.—Very common in fields, on paths and on road sides; generally observed in early morning.

*Limax maris*, Linn.—Taken in greenhouses. Rather common.

*Limax maxinus*, Linn.—Found in mushroom beds. The mushroom spawn was received from France. At one time quite abundant.

*Angustipira alternata*, Say.—Found at roots of willows in sandy soil near water and also in moist places in woods. Very common.

*Patula striatella*, Anth.—Under stones and sticks at edges of woods bordering fields. Rather rare.

*Strophodonta latipalata*, Say.—Found almost everywhere, but more common and larger on sticks near water's edge.

*Stenotrema lineata*, Say.—On side hills under stones in dry places. Very common.

*Stenotrema monodon*, Rackett.—On side hills in dry places, and in moist woods, have taken this species on trees several feet from the ground. Common.

*Monodon var. fraternus*.—Same station as the last. Not so common.

*Tridontia tridentata*, Say.—Very common in woods near water and dry hill sides, a beautiful pink lipped variety is sometimes found. I have taken specimens without any teeth, others without teeth on outer lip, and others with the parietal tooth only.

*Mesodon thyroides*, Say.—Very common in woods both in dry and moist situations. Have taken this on trees four feet from the ground.

*Mesodon alabolaris*, Say.—Very common everywhere. The toothed variety is also common.

*Veloxa pulchra*, Mill.—Common near habitations, under chips and bark around wood piles; rare in the woods.

*Cionella subquadrata*, Linn.—Common in one locality only, moist woods under rotten leaves.

*Pupa arvensis*, Say.—Very abundant at one locality only; at the base of willows on side hill near the Hudson River.

*Pupa pentodon*, Say.—Rare; found under logs with vertigo orata in damp woods.

*Pupa contracta*, Say.—Very common near water, but rare in dry woods. Have taken three hundred at one time in one locality.

*Vertigo ovalis*, Say.—Very common under leaves, sticks, etc., in damp woods.

*Vertigo simplex*, Gould.—Taken in company with *ovalis*. Rare.

*Succinea acuta*, Say.—On dry hill sides under stones. Common but small.

*Succinea ovalis*, Gould.—Found on salt grass on borders of salt water pond near Hudson, also on borders of fresh water pond. Not so abundant as *acuta*.

*Tebenoporus Carolinensis*, Desc.—Very abundant under logs in woods, also under the bark of chestnut trees, and in holes in trees half filled with water.

*Polifera dorsalis*, Binn.—Not so abundant as the above, but not by any means rare. Taken under logs and in stumps.

*Cargidium exiguum*, Say.—Under bark and sticks near water. Very common.

*Limnophya cerperata*, Say.—Common.

*Limnophya desclitosa*, Say.—Common.

*Limnophya pubescens*, Mill.—Common, but not so common as some two years ago, in small running streams.

*Limnophya humilis*, Say.—Common in stagnant pools.

*Radix columella*, Say.—Common in several localities.

*Var. macrostoma*.—In mud-hole, dry in midsummer. Some five years ago this form was very abundant, but has now entirely disappeared, a much smaller form of *Columella* having taken its place.

*Physa heterostropha*, Say.—Common in every pond and stream.

*Physa Prinnensis*(?), Tryon.—Some time ago took large numbers of a form which I refer to this species in one locality only. They have since entirely disappeared.

*Melissoma bicarinatus*, Say.—Very common in Tibbet's Brook.

*Helisoma tricoloris*, Say.—Van Courtland Lake. Rather rare.

*Gyratulus parvus*.—Tibbet's Brook. Common.

*Planorbis aringulus*, Say.—Common in several ponds.

*Anelymus fuscus*, C. B. Adams.—Tibbet's Brook. Rare.

*Anelymus parallelus*, Hald.—In one pond. Very common.

*Buccina undata*, Stimp.—Very abundant on drift in salt water pond near the Hudson.

*Scapharia laevis*, Say.—Some few specimens were collected near Riverdale dock.

*Nassa obsoleta*, Say.—Very common on the mud of Hudson River.

*Lofigo punctata*, DeKay.—Many specimens were taken last May in shad nets off Riverdale dock. HENRY PRIME.

Riverdale, N. Y., Oct. 16, 1880.

### FOOD OF MARINE ANIMALS.

AT the recent meeting of the Association of German Naturalists and Physicians, held at Danzig in September last, a number of papers relating to all branches of science were read. One of the most interesting of all these was by Prof. Moebius, of Kiel, whose investigations into the nature of *Eozoon* have recently attracted so much attention in the scientific world. An abstract of his paper "On the Food of Ma-

rine Animals," is given in *Nature*, and we here reproduce it:

In the sea, therefore, is generated by far the greater number of animal types, and these again in quantity and in bulk are throughout regulated by the existing supply of nourishment. This in its turn depends upon the organic matter of plants which in the sea also supply nourishment to its inhabitants. In our own seas, the North Sea and the Baltic, marine grasses are discoverable near the coast, while twenty to fifty metres lower are other kinds of plants; deeper still if we search we shall find few or none. Loose strips of plants that have been torn away from their roots have been brought up from a depth of some hundred metres; in the Baltic and North Sea these form a dark, soft, spongy mass. Nothing living is visible in this if placed in a tub; but if strained through a sieve tiny mussels, snails and crustacea become visible. In the depths of the sea-mud lining the bottom are countless worms, mussels and little animals which feed upon the spongy mass. Flounders and other fish penetrate into these mud-depths and devour the animals that are there. When the sea-bottom, however, is formed of soft clay, nothing beyond a few worms here and there will be found. Thus in the deeper portions of the Mediterranean, otherwise so rich in animal life, nothing at all is discoverable. The Professor, in the course of his remarks, went on to show that the supply of nourishment to the inhabitants of the sea was now and would be hereafter undiminished; and that the propagation of animal life in the sea would continue unchecked so long as the mighty ocean itself should last.

FASCINATION.—The phenomenon of snake fascination has never been satisfactorily explained though many explanations of it have been attempted. One of the most recent and most plausible of these has just appeared in *Nature* and is given below. The writer says:

In 1859 (21 years ago) I followed in the rocks of Avon, close by the park of Fontainebleau, the fair path of Deneourt, when the approach of a storm induced me to leave the blue arrows, indicating the right path, for a short cut. I soon lost my way, and found myself in a maze of brambles and rocks, when I was startled by seeing on my left hand, at a distance of about ten yards, a snake, whose body, lifted up from the ground at a height of about a yard, was swinging to and fro. I remained motionless, hesitating whether to advance or to retreat, but soon perceived that the snake did not mind me, but kept on maintaining its swinging motion. I could not but be struck and attracted my attention to a greenfinch perched on a branch of a young pine overhanging the snake, with his feathers ruffled, following by a nod of his head on each side of the branch the motions of the snake. He tottered, spread his wings, alighted on a lower branch, and so on until the last branch was reached. I then flung my stick at the snake, but the point of a rock broke it and the snake disappeared with the rapidity of an arrow. On approaching the spot—a real abode of vipers—which I did with the greatest precaution, knowing by observation that the deed may be the result of the bite of a viper, I saw the greenfinch on the ground agitated by convulsive and spasmodic motion, opening and shutting his eyes. I put him in my bosom to try the effect of heat, and hastened to reach the park of Fontainebleau. The little claws of the bird, opening and shutting, perhaps as an effect of heat, made me think that he might perhaps be able to stand on my finger, and he did clutch it, and held on with spasmodic squeezes. In the park I got some water, and made him drink it. In short, he revived, and finally flew off in the line-trench of the park. Now, while following the motions of the snake and bird, I experienced a singular sensation. I felt giddy; a squeezing like an iron-hoop pressed in my temples, and the ground seemed to be heaving up and down. In fact the sensation was quite analogous to that experienced on a beginning of sea-sickness. From these facts, would it not seem probable that fascination is nothing more nor less than extreme fatigue of the optic nerve, produced by a rapid gyratory motion of a shining object, and resulting in a nervous attack and a fever? Could it be that the attention of the dead, unconscious of any danger, and when giddiness warns him of his peril it is too late. The snake is as well aware of this as the *Lophus piscatorius* is of the effect of his membrane. In this system the fact of the bird coming down from a higher to a lower branch would be explained by the supposition that, giddiness overtaking him, he opened instinctively his wings and clung to the next support that he found, the motion having partially removed the giddiness so as to enable him to hold fast. Observe that nothing hindered the bird from drying away, and that the snake, being at most a few long, could never have reached even the lowest branch. Besides he could have no need to protect, for in the rocks of Avon there is no water save rain-water in the hollows of the rocks, and this is not potable on account of microscopic leeches which people it, the instinct of birds teaching them to avoid it.

ANCIENT HUNTING GROUNDS OF LOUISIANA.—The following extracts are from "An Account of the Red River (Louisiana) and Country Adjacent," To Gen. Henry Dearborn, Sec. of War. By John Sibley, Natchitoches, April 10, 1855. They were printed in the *American Register* for 1858, and are certainly worth reproducing for the benefit of our readers:

Near Natchitoches there are two large lakes, one within a mile, the other six miles to the nearest parts. One of them is fifty or sixty miles in circumference, the other upward of thirty. These lakes rise and fall with the river.

"Is almost incredible the quantity of fish and fowl these lakes supply. It is not uncommon in winter for a single net to take the snipe to four hundred fowl in one evening. They fly between sundown and dark. The air is filled with them. They land and fire as fast as they can, without taking any particular aim, continuing at the same stand till they think they have killed enough, and then pick up what they have killed. They consist of several kinds of duck, geese, brant and swan. In summer the quantities of fish are nearly in proportion. One Indian with a bow and arrow sometimes will kill them faster than another with two horses can bring them in. They weigh, some of them, thirty or forty pounds.

*American Register*, p. 65.

The accounts given by Mr. Brevel, Mr. Grappe and other hunters with whom I have conversed of the immense droves of animals that at the beginning of winter descend from the mountains southwardly into the timbered country, is almost incredible. They say the buffalo and bear particularly are in droves of many thousands together, that blacken the whole surface of the earth, and continue passing without intermission for weeks together, so that the whole surface of

the country is for many miles in breadth trodden like a large road.—From the same, p. 65.

**THE PAPPABOTTE.—Rutland, Vt., Oct. 15.—Editor Forest and Stream:** Now won't you please to inform an anxious public what the dence a Pappabotte is? We have heard a great deal of this thing in your columns, but whether it is fish, flesh or fowl, or hard-shell we don't know. Please explain.

VERDE MONTE.

We will, we will. The strain shall be forthwith taken off the mind of "Verde Monte" and others, and their anxiety and that of the public shall be in a measure relieved. Know then, Oh anxious public, that a Pappabotte is neither fish, flesh nor hard-shell, but fowl. In fact, not to put too fine a point on it, a bird. Pappabotte is the Creole French name given in Louisiana and some of the Gulf States to the gray plover, or Bartram's sandpiper (*Actitis bartramia*). The name is referred to by Audubon in his biography of this species. Other names applied to it are upland plover and field plover.

## Fish Culture.

**THE ALABAMA FISH COMMISSION.**—In our list of Fish Commissioners published last week we left out this State because we failed to hear from them, and as in no case did we use any information at second hand we were obliged to leave Alabama out. We are sorry now that we did not wait one week more, as we have just heard from them; but beginning on the 1st of September we thought that all not heard from by the middle of October must certainly have disbanded or ceased to exist. Few know how much labor it involves to get up the annual list, for although many respond promptly, others are absent, and it takes several letters to find them and get a response. There are changes every year, and as the **FOREST AND STREAM** is the organ of communication between all fish culturists in the civilized world, it is a matter of public necessity as well as convenience to have such a list. To complete it we now print:

ALABAMA.

### THE FISHWAY QUESTION IN IOWA.

A MILLER PROTESTS.

OXFORD MILLS, September 20, 1890.

**Editor Eveleva.**—You will oblige me much if you will give me space to express my views in relation to a law passed by the Eighteenth General Assembly of the State of Iowa.

Chapter 128, Section 3, of said law reads: "If, within sixty days after the service of a notice by the sheriff of the county, the owner, agent, or party in charge shall fail to construct and attach a fishway to fish dams, as required by the Commissioner, then the county Board of Supervisors shall immediately proceed to construct and attach the same, and when so constructed, the original cost and twenty per cent. thereon, as a penalty, shall be entered upon the tax book of the county, and shall be a lien on said property, to be collected in the same manner as provided by law for the collection of other taxes."

Section 4 reads: "To carry out any of the provisions of this act, the county Board of Supervisors may issue county warrants for the payment of such expenses, and when the taxes are paid, the warrants and all accrued interest thereon shall be refunded to the county, and the balance, after paying the Clerk and State Commissioner and Board of Supervisors for their services etc., and proceeds to be paid over to the county treasurer, and will become a part of the school fund."

To this the Fish Commissioner adds, on his own responsibility, with all the dignity that belongs to his office, in his notice to mill owners: "No temporizing or temporary work will do, as it will be at the mill owner's expense, as the law requires him to keep it in constant repair."

Mr. Editor, I am a citizen of these United States and desirous of showing willing obedience to the laws thereof. I derived my title to my land from the United States government, clear of any and all encumbrance, without any reservation of erecting or upholding fishways for the benefit of other parties. Therefore I claim protection from the United States from imposition and unjust laws. Neither the State of Iowa nor any other State has any right to pass any law that will annoy, hamper, endanger or depreciate the value of any man's property, without paying him in full for all damages he may sustain. If the people of the State of Iowa want to preserve the fish, what claims have they on the mill owners to compel them to be at all the expense? Does it benefit the miller more than the farmer, or any one else? Do they consider the mill owner an intruder? Do they prefer cat-fish and wall-eyed pike to the manufacturing interests of the State? If so, why don't they pass a law that will give them the power to destroy all the mill-dams in the State, and give the fish a chance? They have just as much right to pass a law of this kind as they have to pass the other.

What benefit does the miller derive from this heavy expenditure of money? You rarely find the miller with a fish-pole in his hand. It is not this class of men who reap the benefits from the fish law. For my own part I would give considerable money if there were not a fish in our rivers. They are the cause of bringing a parcel of lazy loafers to our fishing grounds, from the country and the towns, who destroy the surrounding property, tearing down and burning fences and desecrating the Sabbath day, to the annoyance of quiet, peaceable and law-abiding citizens. Of course there are few exceptions to this rule. Is it for a class of men and boys like heretofore the millers of the State of Iowa have been well protected in their rights by the enactment of good laws on water privileges; and for this reason Iowa stands

second to no grain manufacturing State in our Union—as the reports from the late Miller's Convention at Cincinnati will show. Is it possible that all the protection we have heretofore enjoyed is to be destroyed by some wild fish fanatic who cares more for a wall-eyed pike or a sun-fish than he does for all the manufacturing interests of the State? Let the millers of the State rise in their might and defend themselves against such unjust and arbitrary laws, as they have done heretofore in such cases of imposition, and they will undoubtedly come out victorious.

If this fish law can be enforced, then the next law I expect to see enacted will be one requiring every farmer who owns 160 acres of land on the line of any railroad throughout the State of Iowa to build, grade and lay a track the entire length of his farm at his own expense. Not only this, but the law will require him to keep it in constant repair, at the risk of losing the balance of his farm, if he does not comply with all the requirements of the law, whether from unwillingness or inability. All these benefits he is expected to donate to the travel of the general public. Why not enact and enforce a law of this kind? One can be as easily enforced as another. I can see no difference.

If the people of the State of Iowa want to stock their rivers with fish, why not levy a general state tax for the purpose of erecting these fishways and keeping them in repair, at the same time giving the mill owner a guarantee that any damages he may sustain from the erection of such fishway will be promptly paid by the State, or the county in which the mill dam is located. The State has no more claim on the mill owner in this respect than it has on the farmer, mechanic or any other class of men. I think it is the duty of the press throughout the State to come out boldly and denounce all such unjust laws.

JUSTICE.

REPLY BY COMMISSIONER SHAW.

After giving the law, the correspondent, who evidently, from what is written, is a mill owner, gives what appears to be his earnest, honest sentiments, and states quite fully what he thinks to be the grievances to which dam owners are subjected by the new law. Being a good argument from his point of view, it deserves a careful and candid consideration at the hands of the public.

He says first: "I am a citizen of the United States and desirous of showing willing obedience to the laws thereof. I derived my title from the United States government, clear of any and all encumbrance, without any reservation of erecting or upholding fishways for the benefit of other parties," and claim protection from any law that will hamper, endanger, or depreciate the value of any property, without payment in full for all damages sustained.

The writer overlooks the fact that he is but one of several hundreds that have obtained titles exactly alike from the general government to the banks of the Wapsipinicon River, and that by making the river impassable for fish he has been depreciating the value of their property, thereby doing indirectly to all these parties just what he now complains the State should not do to him.

We hold these principles to be well settled by usages and decisions—so many that we find it impossible in a short article to quote but a very few of them:

1. In any grant from the public to individuals, any privilege which is not expressly granted is withheld.

2. A river is a public way.

3. The right to the water and fish in a stream is a joint one to all the owners, and must be so used by each as not to unreasonably interfere with the rights of others.

4. The passage of fish in a river is a public right.

5. The Legislature has the right to make such laws as will protect the public from injury by an improper use of any of these public rights.

To partially prove the correctness of these positions we will submit a few decisions.

"Every owner of a dam holds it on condition or limitation that a sufficient fishway should pass over, and shall be allowed for fish." This limitation being for the benefit of the public, is not extinguished by any intention or neglect in compelling the owner to comply with it." (Stoughton v. Baker, 4 Mass., 528.)

In that case there was neglect to build a fishway from 1634 to 1789; but it was held that the duty continued.

"The preservation of fisheries is for the benefit of the public. The right to have the fish pass up a river is a public right. The right to catch the fish is a private right; but the right to have the fish there, so that they can be caught, is a public right." (Commonwealth v. Essex Co., 13 Gray, 247.)

"The grant of privileges and exemptions to a corporation is strictly construed against the corporation, and in favor of the public. Nothing passes but what is granted in clear and explicit terms." (Ohio Life Ins. Co. v. Debit, 16 Howard, 435.)

"Ownership of the banks and bed of a stream gives to the proprietor the exclusive right of fishery opposite his land, as well as the right to use the water to create power to operate mills; but neither the one nor the other, nor both combined, confer any right to erect any obstructions in a stream to prevent the free passage of fish up and down the river at their accustomed seasons, as such obstructions would impair and ultimately destroy all such rights owned by other proprietors both above and below the obstruction on such stream."

"Such water is everywhere regarded a public right, and fisheries, even in waters not navigable, are so far public rights that the Legislature may ordain and establish regulations to prevent obstructions to the passage of fish, and to promote the usual and uninterrupted enjoyment of the right by riparian owners." (Commissioners v. Holyoke Water Power Co., Supreme Court of United States, December Term, 1872.)

This Holyoke case is the most noted that has ever been determined in this country, and was especially favorable to the dam owners, as a moment's glance at what was claimed by the defendants will show.

It was claimed for them, as has been claimed by our correspondent, that they had a good title from the Government, and so were entitled to use their property as they saw fit.

It was claimed that they had used the water power, as they were using it, for a long period of time and so had obtained the right to use it by prescription. They had expended \$5,000,000 in improving their power, and so it was against public policy to compel them to put in a fishway. Also, that they had paid owners of fishing or riparian rights above their dam \$30,000 for those rights, and that that fact should relieve them.

But more especially it was claimed that they had a special charter from the State Legislature permitting them to build just such a dam as they had built.

We have no time or space to go over this case, but will say that all that was claimed for the defense was proved or admitted; that it was argued by eminent counsel, both be-

fore the Supreme Court of Massachusetts and the Supreme Court of the United States; that on August 31, 1872, the Supreme Court of Massachusetts entered a decree against the defendants, compelling them to put in a fishway; that upon appeal to the Supreme Court of the United States, the decree was affirmed at the December term, 1872, and that the owners were compelled to put in a fishway. We could cite dozens of decisions bearing upon the question, and all our readers know of no one decision that has not borne in the same direction. So we consider the question virtually settled, so far as the courts are concerned.

The Judiciary Committee of the House and Senate of the Seventeenth General Assembly of Iowa, composed of the best of legal talent, so determined and reported, after a full investigation, when this law was before them for their action.

Outside of this question of law there is one of right or "justice." Originally all the purchasers of property along a stream pay the same price for their lands. Fish were abundant along the streams, and are the property of the joint owners. One man builds a dam that effectually stops the passage of fish; but as they are plenty, no one objects. The mill power brings wealth to the owner, until he boasts of its value. The dam brings barrenness of fish to the stream, until the mill owner, scorning the title that is left, says: "I would give considerable money if there were not a fish in our river."

Now those who have suffered these losses ask those who have assumed to own all there was of value along the river, and in so doing nearly destroyed their neighbors' rights, to so use the privilege they are enjoying as to permit the fish to pass up the streams through the waste water that flows over their dams, in order not to entirely annihilate the fish—knowing full well that what they ask will only partially restore to them their rights, but being willing to suffer this much rather than to injure in the least the water powers that furnish the motive power for an industry which is fully and justly appreciated.

The fair discussion of this question would occupy more space than we have at our command, but we think that what we have said covers the case fully, where the builders own the land wholly upon which their dams are built. But it might be added, in rounded streams, like the Wapsipinicon, a portion of the lands upon which the dams are built—that is, the bed of the stream—has never been bought or sold, and belongs as justly to the poorest person in these United States as to the parties who assume to own the dams that are upon them; and there is no question, as a matter of fact, but that an action for their entire removal could be sustained in the proper courts, if sufficient cause were shown for so doing.

What we have written is in the kindest of feeling toward mill owners, but is what we believe to be the facts and the law in the case, and what is being demanded by the masses of our people at the hands of owners of dams.

The Fish Commissioner claims to have made plans of fishways, as far as he was able, so that they shall not interfere with the water powers (as they only use the waste water), and that, in his opinion, they will add strength to the dams, while they are as cheap as durability and efficiency will permit.

B. F. SHAW.

### FISH CULTURE IN FRANCE.

**FROM** the annual report of M. Ravet Watel, Secretary to the Société d'Acclimation de Paris, for the past year, we publish the following translation of that portion of it which relates to fish culture. He says:

As in preceding years, the subject of reappearing the streams has continued to occupy you seriously, and while seeking to find a way of putting an end to the abuses of fishing and poaching, which have caused the disappearance, more or less complete, of fish in almost every river, you endeavor to enrich our ichthyological collection with rustic species of rapid growth, and consequently more fit than indigenous species to facilitate a speedy reproduction of fish. Among these exotic species the salmon of California merits to attract your attention in a particular manner, because of its remarkable vigor, its unusually speedy development, and its fitness to endure a high temperature. The fish of the Baïre, Commissioner-General of Fisheries in the United States, our society has obtained a considerable quantity of fruitful eggs of the *Salmo gairdneri*. These eggs were entrusted to several of our colleagues, and judging from the reports which we have received, the species does not seem to lose in any degree the excellent qualities which distinguish it in America. Already a considerable number of fry have been supplied into a great many rivers, and permit us to expect a considerable number of excellent specimens of salmon in our French waters. We cannot express too many thanks to Prof. Baird, who, by his excessive generosity to our society, has permitted us to obtain so precious an acquisition.

We owe, besides, great gratitude to Mr. Fred Mather, of Newark, N. J., assistant to the Commissioner of North American Fisheries, who has been kind enough to see to the shipping of the eggs destined for the society, and to contribute to the success of the invoice by his intelligent and valuable assistance.

The improvements made in foreign countries, and especially on the other side of the Atlantic, in the artificial reproduction of fish, have excited our attention, and you have hailed with great interest the information given you as regards the labors of the superior Commission on Fisheries in the United States. An assembly of distinguished and learned men and of professional capacity, having at its head the eminent sportsman M. Baird, this commission renders the greatest services to pure zoology, as well as to fishing industries and the culture of fish. Triumphant over every difficulty, it has succeeded in applying to the sea-fish the same process of artificial multiplication, whose usefulness a few years ago was contested with regard to the species living in fresh water. It is right to add that it is on a gigantic scale, and that this process will be put in operation at the end of the present year. The Universal Exposition of 1878 furnished the occasion of your success as could not escape your attention. You had a report on the culture of fish at the great international conference presented to you, and Mr. Chalmers has given you an account of the interesting observations which he had occasion to make at the Aquarium of the Trocadero during the time that the direction of this magnificent establishment was confided to him.

Mr. Dussac sent you a detailed account of the transformation of salty swamps into reservoirs for fish, and of the importance which the creation of such reservoirs would have as regards public utility.

Finally, you have recorded with care the communications forwarded by Mr. Ditten on the reproduction and propagation

of lobsters and oysters in Norway, and those regarding the researches of Dr. Henry Le Roux on the hybridization of the oyster.

Sea and River Fishing.

THAT SIX AND A QUARTER POUND BASS.

WE recently referred to a photograph of a small-mouth black bass, *Micropterus salmoides*, sent us by Dr. Sterling, which had the effect of removing our doubts about their reaching this weight, or rather a pound and a quarter below the avaroidupois named was the limit at which we stuck. The letter which accompanied the picture was mislaid, but recognizing the necessity of placing this upon record in order to remove the skepticism of others as to the size attained by this fish in Lake Erie, we now publish it:

CLEVELAND, O., Sept. 14.

EDITOR FOREST AND STREAM:

I enclose to you the photograph of a small-mouth black bass which weighed exactly six and a quarter pounds, without the addition of a lead sinker in its stomach either. I made a cast of the fish at the time it was taken, but being hastily done the silhouette was not perfectly removed, consequently the scales are not well defined, though the proportions and parts of the fish are correct. I have caught this fish in the St. Lawrence, Niagara River, and Sault Ste Marie as well as throughout Lake Erie, and at several places in lakes Huron and Superior, but only in one locality have I found them to exceed four pounds, and that is among the islands at the head of Lake Erie.

The large mouth bass is never taken in Lake Erie. This fish frequents the marshy, grass-grown rivers and estuaries; he is green, lanky and slimy, smells of his surroundings, and when cooked has about the same taste: is soft in flesh; while on the contrary the small mouth is the most active fish on the hook of his size. He frequents clear, cool water, and, if in a stream that is rapid and aerated, his flesh is particularly hard, and I have a positive belief that, like the turbot, he improves by two or three days' keeping, which we can say of no other fish.

E. STERLING, M. D.

DO FISH HAVE PITTS?

WHILE walking by the Hudson at Inwood the other day I saw a succession of bright flashes on the surface of the water coming from some object advancing down the river. It proved to be a blackfish, and it was going through the most singular gyrations, unlike any that I have ever seen in sick, injured or dying fish. It lay flat upon its side; its fins were without motion, its eyes were bright, not clouded; its mouth was rigidly open and partly out of the water, and its tail struck downward and a little inward, so that the fish performed a complete revolution in the course of four or five flips of its tail. The flap of the tail was not irregular, but was a strong, healthy beat, and the gyrating motion of the fish was suggestive of waltzing. Thinking that it had escaped from the hook, or had been thrown back after being taken out of the water, I examined it closely when it came within a few feet of the bank, and saw that it was a sound, well-fed fish, without mark of hook or injury of any kind. It did not struggle like a dying fish, nor float for moments without motion, nor endeavor to swim to the bottom, and in the five minutes or more that I kept it in sight it did not intermit in the strength or regularity of the beat of its tail. I threw some pebbles into the water near it, but not until I had thrown several handfuls did it exhibit signs of returning consciousness. When I used large stones to create a greater shock in the water the fish made efforts to right itself, and, after much vigorous bounding, succeeded. At last I tossed a heavy rock within a couple of feet of it, and with a frightened rush it dived toward the bottom and did not appear again. I never knew that fish had a nervous organization of sufficiently high order to enable them to have fits, but this particular fish acted like the victim of a nervous disorder. Can anybody give an explanation of its conduct?

C. M. S.

The symptoms are those of a fish which has been poisoned by persons who use forbidden articles for procuring minnows for bait, but it is, of course, impossible to say.

A BIG STRIPED BASS.—New York, Oct. 21.—Having seen an inquiry in your issue of last week, asking if there was any record of the largest striped bass ever taken with rod and reel, I would say that there is on record at Pasque Island Club one taken some ten years ago by A. B. Dunlap weighing 62 lbs. The writer took one two years ago of 60½ lbs. weight, also on record at about club. I saw one in New Bedford, taken at Noyah's and, weighing 64 lbs., and have heard of one of 67 lbs., and from reliable information. There is recorded at Pasque Island many between 50 and 60 lbs., and between 40 and 50 lbs. is no rarity with us at Pasque. All of above were taken with rod and reel. Yours truly, FRANK O. HERRING.

We are glad to receive such notes as the above, and place these things permanently upon record. When future historians of angling wish to write up any fish, they will naturally turn to the files of FOREST AND STREAM for such information, and will miss all items in local papers and occasional magazine articles. Most sportsmen recognize the fact that FOREST AND STREAM is the record for all connected with the Rod and Gun, and that no matter where a thing may be printed it is not on record until embodied in the pages of FOREST AND STREAM, no more than the pedigree of a Jersey bull is on record if published in a village newspaper and omitted from the Herd Book.

We therefore desire to impress upon our readers that for all purposes of record of sizes of game animals and feats with rod and gun, FOREST AND STREAM is not only the record but the only one.

ALASKA SALMON.—A correspondent of the San Francisco Bulletin, writing from Alaska, says: "As for the salmon, as seen this morning urging their way up the swift, braving

currents—tens of thousands of them, side by side, with their backs out of water in shallow places—nothing that I could write may possibly give anything like a fair conception of the extravagance of their numbers. There is more salmon apparently, bulk for bulk, than water. In fording the stream the writhing multitudes, crowding against one another, could not get out of one's ways. One of our men waded out in the midst of them and amused himself by seizing them above the tail and swinging them over his head. Thousands of them could thus be taken by hand while they are making their way over the shallows among the stones. Whatever may be said of other resources of the territory, it is hardly possible to exaggerate the importance of her fisheries. Not to mention cod, herring, halibut, etc., there are probably not less than a thousand salmon streams in Southeastern Alaska as large or larger than this one (about forty feet wide) crowded with fine salmon every year. The run commenced this year more than a month ago, and the King Salmon, one of the five species recognized by the Indians, was running in the Chilcat River about the middle of last November."

SILVER BASS.—Illinois State Laboratory of Natural History.—Normal, Ill., Oct. 18.—In response to your request for information about the use of the name "Silver Bass," I respectfully report that the name is applied in Northern Illinois very generally to *Pomoxis nigromaculatus*, Z. S., known in the Illinois and Mississippi regions as the black croppie. I don't know about the change of color, but the purple spot on the operculum and the long lower jaw are right, while the body is short and deep. If this should prove to be your correspondent's species, and if a knowledge of their natural food is of any importance to him, it may be worth while to note that I have found the young dependent upon *Entomostraca* much longer than most other fishes, feeding upon little else until three or four inches long. The food of the adult varies in the Illinois River with the time of the year. In early spring they take entomostraca in immense numbers; in summer they depend chiefly on the aquatic larvae of May-flies, dragonflies and the like, and in autumn, as the weather turns cold, about a third of their food, on an average, consists of small fishes. The larvae of May-flies and dragon-flies are, on the whole, much the most important of their food resources. For usefulness the species ranks here about with the white bass (*Morone chrysops*).

S. A. FORBES.

Montreal, Canada.—In your issue of the 14th inst. a paragraph occurred headed "Silver Bass." There is a fish taken in Lake Ontario locally known by the latter name. It belongs to the genus *Labrax*, but I cannot determine the species. The small-mouthed fishes which Mr. Begg gave the Society in France, and which came from Lake Ontario, evidently do not belong to the bass family. The pickerel is large in *Labrax*. I am anxious to see a published list of this genus, as species occurring in northern waters are not identified.

WM. COOPER.

GRUBS IN BASS.—London, Can., Oct. 19.—While reading a letter in your paper, from some gentlemen fishing in Michigan, I noticed they had caught some bass, slightly affected to many I have caught, namely, with grubs in the flesh. The grubs seem to be firmly imbedded in the flesh, but do not appear to injure the fish in the least. I have caught many like this in the Lakes of Muskoka and also in some of our rivers. Though not very nice-looking before being cooked, after that I never could distinguish anything wrong with them. I would like to hear very much what is the cause of it, and if they affect the fish.

A. G. C.

GRUBS IN FISH.—Cincinnati, O., Oct. 20.—In regard to the communication of "W. D. T.," in FOREST AND STREAM of Oct. 14, relating to the presence of grubs in black bass, I would say that nearly, if not all species of fish are subject to parasitic worms or grubs during warm weather, and sometimes at other seasons of the year. These parasites are destroyed in the cooking of the fish, and are not at all injurious to the human economy. There is no doubt, but we take into our stomachs, with food of various kinds, thousands of parasitic creatures, some living, others destroyed in the process of cooking. If we should submit our aliment to microscopic examination, and refuse all that contained living organisms, we should all become "Tanners," for, as Swift says:

"So, naturalists observe, a flea  
Has smaller fleas that on him prey;  
And these have smaller still to bite 'em;  
And so proceed ad infinitum."

J. A. HENSHALL.

HOW TO DRESS BLACK BASS AND PICKEREL.—St. Joseph, Mich., Oct. 17.—About everything has been written on black bass but how to dress them. I will tell you how I do it. Take a thing, old case-knife made sharp (a file is the best to sharpen anything but a razor); begin at the tail and run to and from you a quick, sharp stroke just under the scales and not too near to the meat. That leaves a thin white membrane or skin on the meat and takes off all scales and black skin. The skill will soon be acquired. It takes off all the black, and when cooked takes away all many things. I dress pickerel the same way. Now let our piscatorial brethren try it, and I pledge my word they will not scrape scales any more if they have been in the habit of doing it. Brethren, try it.

LUTRON.

AN ELEVEN-POUND TROUT.—Bethel, Maine, Oct. 1.—The close season for trout is now upon us, and hundreds of sportsmen are now returning to their homes from the Oxford County lakes. The catch of large brook trout has been very fair, and in most cases satisfactory; although some parties have been disappointed, and have carried home many beautiful specimens of the largest *Salmo fontinalis* in the world. The largest specimen known to be caught and weighed was carried home by a Mr. Marble, of Boston; weight, eleven pounds. Many more of the weight of ten, nine, eight and less pounds were taken at upper dam, foot of Moolamagantic. Trout of the largest size could, and can now, be seen readily by any one on and near their spawning grounds, but they charily rise to a fly. The most of those taken are baited with spawn, although many parties will not deviate from the more sportsman-like way of fly hooking all manner of sizes. Generals of larger and smaller kinds abound in these regions, and the mountains are gorgeous in fall foliage, forming a fitting tableau to the closing up of the enjoyments of a successful season.

J. G. RYAN.

SALMO WILMOTI.—Montreal, Canada, Oct.—What about the name of the author of *Salmo wilmoti*? It is the duty of

your correspondent "B." who boldly answered my prior statement, to elucidate this matter. I am anxious to know more about this fish and its habits, especially as there is a statement made that being confined to Lake Ontario it visits salt springs within the lake. I cannot find a person to corroborate this assertion, and I look on it as absurd.

Forty-five specimens of twenty-six species of stuffed fishes were hung up by me at our late exhibition. My fishes are placed on boards to hang from the wall like pictures. In this way they are preferable for museum purposes. The collection of fishes exhibited by me last year at Ottawa, Ont., were purchased by Dr. Storey Hunt, the celebrated chemist, for McGill University Museum. Canadians give but little encouragement to natural science, hence this branch of the art suffers.

WM. COOPER.

ILLEGAL FISHERMAN STOPPED.—It is a pleasure to record that one of the newly appointed Game Protectors of New York has entered upon his duties in a fearless manner, and in a recent raid on the gill nets in Cayuga Lake destroyed forty of the nets. The Rochester Express, from which we got the news, says:—"State game constable, George M. Schwartz, returned to-day from a successful expedition on Cayuga Lake, for which place he left here on Wednesday. It had been surmised that a good deal of illegal fishing was being done in Cayuga Lake. The constable chartered a steamer at Penn Yan last evening and made a tour up the lake to Hammondsport with grappling irons dragging in the water. The result was that over forty gill nets were drawn to the surface. These were destroyed. A good haul."

SIZE OF BLACK BASS.—St. Joseph, Mich., Oct. 17.—I see in number Oct. 14 you express doubts of black bass exceeding four pounds' weight. If you will come here we will take you out where you can take and see taken several in a day, genuine *Micropterus salmoides* (*Microstoma*) that will weigh from four and a half to five pounds. There has been near a dozen taken here the past week that went four to five and a half pounds. We never catch any *Megastoma* that go over four pounds probably. I frequently hear of the *Microstoma* being caught weighing seven and eight pounds. I never saw one over six to seven pounds.

LUTRON.

THE LARGEST HALIBUT.—The Cape Ann Advertiser, in giving the record of the largest halibut, says:

Last week we published a statement that a halibut weighing 377 pounds, landed by sch. Wachusett, was the largest ever landed. This is true so far as Bank halibut are concerned, but Capt. William H. Oakes comes to the front and states that in 1872 he purchased a halibut brought in from Georges, which weighed 447 pounds. He telegraphed to Boston and sold him, and the monster attracted much attention in the market. A halibut was landed at the New England Fish Company's wharf a few years since which weighed 368 pounds.

Game Bag and Gun.

—Address all Communications to "Forest and Stream Publishing Company, New York."

GAME IN SEASON IN OCTOBER.

Moose, <i>Alces americana</i> .	Woodcock, <i>Philohela minor</i> .
Caribou, <i>Rangifer caribou</i> .	Black-bellied plover, <i>oxy-ops</i> .
Red or Virginia deer, <i>Cervus canadensis</i> .	Red-backed sandpiper, <i>oxy-ops</i> .
Red or Virginia deer, <i>Cervus canadensis</i> .	Long-billed curlew, <i>Numenius longirostris</i> .
Squirrels—red, black and gray.	Turkeys, or calico back, <i>Streptopelia interpres</i> .
Flares—brown and gray.	Red-breasted snipe, dowitcher.
Reed or rice bird, <i>Dolichonyx oryzivorus</i> .	<i>Macrorhynchus griseus</i> .
Wild Turkey, <i>Meleagris gallopavo</i> .	Red-backed sandpiper, or ox-bird.
Pinnated grouse or prairie chicken, <i>Cynopidae cupido</i> .	<i>Tringa americana</i> .
Stuffed grouse of Pennsylvania, <i>Bonasa umbellus</i> .	Great marbled godwit, or marlin.
Quail or partridge, <i>Ortyx virginianus</i> .	Willow, <i>Totanus semipalmatus</i> .
Sora, rail, <i>Porzana carolina</i> .	Tattler, <i>Totanus melanoleucus</i> .
	Yellow-shanks, <i>Totanus flaripax</i> .

"This enumeration is general, and is in conflict with many of the State laws."  
"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf-bird, phalaropes, avocets etc., coming under the group *Lymniscus*, or shore birds. Many States permit prairie fowl (grouse) shooting after Aug. 15.

THE VELOCITY OF SHOT.

EXPERIMENTS GIVING DIRECT MEASURES OF THE TIME OF FLIGHT OF FOWLING-PIECE SHOT OF VARIOUS SIZES OVER VARIOUS DISTANCES, WITH REMARKS ON THE APPLICATION OF THESE MEASURES TO THE ART OF SHOOTING ON THE WING.

By ALFRED M. MAYER, Professor of Physics in the Stevens Institute of Technology, Hoboken, New Jersey.

[Read before the American Association for the Advancement of Science, at Boston, on August 31, 1889.]

ABOUT a year ago I determined to make a series of experiments with an undeniably accurate chronoscope, which would give direct measures of the velocity of fowling-piece shot of various sizes. At that time I was not aware that any determinations of this kind had ever been made, though similar ones to the velocities of the balls of ordnance and rifles were numerous. Thus I began my work entirely free from preconceived ideas as to what the experiments would reveal. It was only toward the end of my work, when on a visit to my friend Professor Rice, of the United States Naval Academy, that the Professor told me that he had made a short series of similar experiments with a Le Bonald chronoscope, and had published them in the Rep. and Grs. in July, 1875. This paper I then read, and I here repeat it as an appendix to my paper. My attention has subsequently been called to the works of other experimenters in the same direction; of them I have taken references, but have purposely avoided reading them.

I have made this preamble to my paper to show that my experiments are to be taken as entirely independent of other similar work, for I was not guided nor influenced during my experimenting by a knowledge which might cause me to reject certain experiments as erroneous because they did not give results which I had thought they should have given; for no matter how conscientious an experimenter may be, he is sometimes influenced by preconceived notions, and unwittingly desires his experiments to bring out certain results. I

have always in my work endeavored to avoid this mental prejudice, and have therefore, whenever possible, worked in this manner: viz., I write down the numbers given by the experiments as they are successively made, and do not reduce or compare them till after the whole series has been finished. The reader will therefore find in my results apparent anomalies, even contradictions, or, if you please, absurdities. These anomalies are those numbers which always catch the eye of him who does not know, from experience, the difficulties and exhausting toil of a protracted series of delicate experiments; and on these anomalies he will dwell to the exclusion of what, in the main, the experiments conclusively show. To such I say, with the experience of twenty-five years of experimenting: Make the experiments for yourself and do better, and for your better work science will be indebted and will surely credit you with your superior skill and patience. Each experimental investigation is a step in progress to something better; but without the first step is made the firmer tread will not be gained. *C'est le premier pas qui coute.*

Nature, however, does not work in an anomalous, contradictory or absurd manner. These anomalies are of our own production, and are due either to the errors of the apparatus we use, or to certain peculiar actions in the phenomena which accompany those we are particularly studying. The apparatus detects and measures both of these classes of actions, and it is the office of the investigator, after his experiments have been finished, to unravel one from the other. Thus, for example, in the flight of shot I have many moving pellets, and they do not all move with the same velocity. No apparatus known can give the velocity of each pellet in a charge so that we may therefore deduce the average velocity of the charge. So it happens that with charges of large shot, when you have fewer pellets, and especially when these charges are shot over great distances, some pellets of high speed may strike the target and record their velocity, while in the next experiment, pellets of lower velocity record themselves. This is a fact which is avoidably happen, no matter how accurately we hold the gun on to the target. But these very differences shown in the time of flight of the various pellets point out an interesting and important fact; showing that such work as we have begun requires a long time for its completion, for the measures of the velocities of many charges of the same weight of powder and shot must be made to get the average velocity of all the pellets. It may be here asked why I did not do this. To this question I reply that I cannot afford to give a year of my time to make the first step in this subject of investigation. A rich field I have pointed out for other experimenters to enter; and I trust that since our large American arms manufacturers are now making fowling-pieces they will devote a mile of their profits to just such investigations as this one, on which I have spent much of my thought, time and private means.

The errors of the records of the apparatus itself can easily be investigated, and they have been accurately determined. They are exceedingly minute and cannot affect appreciably the results of our experiments.

The deductions which I make from these experiments are those which these experiments show, and not what may be shown in the experiments of others. I give these experiments of mine as entirely independent evidence on the subject of the velocity of shot, and of course my readers may give them just as little or as great weight as their individual judgments may determine. But they have been conscientiously and carefully made no one will doubt who has had any experience in the use of chronoscopes used in measuring the velocity of projectiles.

I do not think that the sportsman and experimental physicist are often found in one person, even in this country—still less in Europe. From my youth I have been devoted to everything relating to the gun, and this experience has, I presume, given me an advantage in this investigation over other physicists. I had the good fortune to have had a better sportsman and experimenter for my assistant—Professor B. F. Thomas, now of the University of Missouri—who entered enthusiastically into this work, aiding me with his ingenuity as an experimenter and with his suggestions derived from his extensive experience as a sportsman.

#### Description of the Chronoscope and a Determination of the Magnitude of the Error in its Results.

The chronoscope used in these experiments is very simple. It consists of a metal cylinder turning on an axle on which is cut a screw. This screw moves in a stationary nut, and this arrangement gives the cylinder a lateral motion when it is revolved on its axle. The cylinder is covered with fine printing paper, which is then smoked with burning camphor. A tuning-fork is screwed to one end of the thick end of the cylinder. The other end of this piece of wood is hinged on to a base. To the end of one of the prongs of the fork is cemented with shellac a small triangular piece of foil. The fork is vibrated by a bow, and then the hinged board is brought down against a stop so adjusted that the point of the foil on the fork just touches the smoked paper. On now turning the cylinder a wave trace will be written on it by the vibrations of the fork.

To determine the number of vibrations made in one second by the fork, a good clock, accurately rated, sent at each second an electric spark from an induction coil out of the tracing point and through the paper. Thus the sinuous traces of the fork were punctured by electric sparks. The number of waves of the fork's trace contained between two of these punctures is the number of vibrations made by the fork in one second. A multitude of experiments showed that the range of the determination of the number of vibrations per second of the fork was very small, and that means of several such measures did not vary from one another by more than 1-10th of a vibration, or, expressed in time, the variation did not surpass the 1-25000th of a second. This fact showed that the chronoscope, so far as its records were concerned, was sufficiently constant and accurate for measures on the velocity of projectiles.

The effect of temperature on the vibratory period of the fork had been determined in a previous research. It amounts to an increase of 1/1000 of a second for each degree of temperature for an increase of 1 deg. Fahr. in the temperature of the fork.

The guns used in the experiments had rebounding locks. The primary current of an induction coil passed through a break-piece fixed under the rebounding hammer, so that at the instant the cartridge was exploded the electric current was broken and then immediately formed again. The current which passed through this break-piece was wired by a wire to a thin upright piece of tin plate whose front surface leaned against a thick copper wire. Another wire led from the tin plate (which stood in a shallow trough of mercury) back to the battery. One terminal of the secondary coil of the induction is connected with the axis of the metal cylinder, the other terminal with the foot of the fork.

This chronoscope is worked as follows: One person vibrates

the fork with a bow, and then brings the pointed foil down on the smoked paper, and rotates the cylinder. While the fork is marking its sinuous trace he cries "fire," and the other person discharges the gun at the tin plate. At the instant the cartridge explodes a minute spark issues from the tracing point of the fork and cuts a small hole through the blackened paper in the sinuous trace of the fork, and when the tin plate is knocked over by the shot another similar spark flies from the tracing point.

We know the distance between the breach of the gun and the tin plate, the number of flexures in the trace of the fork contained between the two spark holes gives the time the shot took to go over the known distance, whence the velocity of the shot per second is readily computed.

The fork used in these experiments made about 256 vibrations, or flexures, in the trace in one second; so if there should appear 32 flexures between the two spark holes the record would give 32/256th, or one-eight of a second for the time of flight of the shot from the gun to the distant target. Two guns were used in these experiments, one of 12 the other of 10 gauge. They were "full-choke-bored," and were choked exactly alike. They were made by the Colt Arms Manufacturing Co. of Hartford, Ct.

The following tables give the results of our experiments:

I. 10 Colt gun, 5 drs. Curtis & Harvey powder, 1 1/2 oz. shot.				
Size of shot.	Vel. 30 yds.	Vel. 40 yds.	Vel. 50 yds.

Each measure of velocity given in these tables is the mean value obtained from several experiments, varying in number from three to six. The headings, "velocity, 30, 40 and 50 yards," mean that the numbers under them give the average velocities of the flight of shot over these distances, and not the velocities at 30, 40 and fifty yards from the gun.

It will be observed that the shot used were Nos. 10, 8, 6, 3, BB, FF, and No. 1 buck shot. They were so selected because a pellet of any number in the above series weighs very nearly double the preceding one. Thus, a pellet of No. 8 weighs double one of No. 10, a pellet of No. 6 weighs double one of No. 8, and so on. These relations of weight among the pellets were obtained so that I could readily reach the relations existing between the velocity of gun-shot and the weight of the pellet. The shot used was kindly furnished me by Talham & Bros., of New York, who used carefully gauged sieves in their manufacture. The powder used was Curtis & Harvey's Diamond Grain No. 6. The powder and shot in each cartridge fired had been carefully weighed out in an accurate balance.

A glance at the tables at once shows the rapid increase in the velocity of gun-shot from No. 10 up to No. 3. With the heavier pellets the increase in velocity is less marked. Thus, the table headed "10 Colt gun, 4 drs., Curtis & Harvey, 1 1/2 oz. shot," shows that No. 8 shot has 72 feet per second velocity over No. 10 shot, and No. 6 has 46 feet over No. 8, while No. 3 has only 23 feet over No. 6, and BB shot gains only 11 feet over No. 3.

The relations between velocity and weight of pellet shown in this table may be taken as a type of all the experiments, and I have graphically shown their relations in the accompanying curve.

The divisions on the scale; measured from the bottom line upward, give the velocity per second of the pellets. One unit on this scale equals 20 feet of flight of a pellet, and a unit of the scale measured from right to left on the diagram, equals one unit of weight of pellet. The weight of a pellet of No. 10 shot is here taken as the unit of weight. The numbers of the shot are written under the horizontal line; the velocities on the vertical line. When the curve intersects these lines we find the velocity given on the vertical scale corresponding to the number or weight of shot given on the horizontal scale and the diagram.

Professor Rice has found that this curve can be expressed by a mathematical formula. The curve is very nearly the curve of secants, and the formula for it is:

$$\frac{y}{a} = \frac{1 - a \cdot x}{a}$$

Denoting by  $x$  the velocity, by  $y$  the weight of a pellet, and  $a$ ,  $b$  and  $c$  being undetermined constants.

This may interest if not amuse some of my readers who may remember a little of their mathematics. But the thought that shooting by mathematics will be found very unprofitable may console those sportsmen who have had the pleasure to forget all the formula they had ever learned.

So far as the experiments with these two special guns show, there is no doubt a great superiority in the 10 over the 12-gauge

gun, when each is loaded with the same weight of powder and shot. Thus, with the same charges of powder and shot (4 drs. powder and 1 1/2 oz. shot) fired from the 10-gauge, gives a velocity of 100 feet per second more than that given by the 12-gauge. The fact is conclusively shown in the comparison of the figures in the two tables headed "10 Colt gun, 4 drs. C. & H. powder and 1 1/2 oz. shot," and "12 Colt gun, 4 drs. C. & H. powder and 1 1/2 oz. shot," and the difference in velocity in favor of the 10-gauge was in each of the sixty separate experiments, which were made to get the numbers (contained in the above mentioned tables) on the lines of No. 8 and No. 10 shot.

With No. 10 shot the mean velocity given by the 10-gauge gun over the first 30 yards is 848 feet. With the same charge in the 12-gauge the velocity is 748 feet, showing a difference of 100 feet in favor of the 10-gauge. With No. 8 shot the difference amounts to 70 feet. The average difference in favor of the 10-gauge in the flight of shot Nos. 8 and 10 over 40 yards amounts to 110 feet.

If we assume, as we certainly may without grave error, that the penetration of shot varies as the square of its velocity, these experiments will give the relative penetrations of the 10 to the 12-gauge about as 9 is to 7. These experiments show that the recent movement in favor of small-bore guns is one in the wrong direction. It appears that a 10, or even an 8-gauge gun, if of about 8 lbs. weight, would be the best fowling-piece for upland shooting.

That the 10-gauge shows such superiority over the 12 may be accounted for by the fact that the same charge occupies less length in a 10 than it does in a 12-bore, and hence there are fewer pellets in contact with the barrel of the former than of the latter to oppose by their friction the projectile force of the powder; and secondly, the powder in a 10-gauge is exploded nearer the centre of its volume, and thus does not have so much chance of blasting before it unbursts powder contained in the portion of the charge removed from the point of ignition.

I also venture to predict that with the same weight of barrels the 10-gauge will not heat as much as the 12, because the motion of the shot lost by the greater resistance it opposes in a 12-gauge cartridge, must appear in the form of heat.

The third fact which these experiments show is that the proper charge of shot in a 12-gauge gun for upland shooting is 1 1/2 oz. and not 1 1/4 oz., as has of late years been the practice to use; for the tables show that with 1 1/2 oz. of shot and 3 1/2 drs. of powder an average velocity is obtained which requires 4 drs. of powder to give 1 1/2 of shot a velocity equal to that given by 3 1/2 drs. to 1 1/2 oz. Now, 4 drs. of powder, if fired from a gun weighing less than 8 lbs., and with a good, strong, muscular shooter, is disagreeable. The effect on the body, and especially on the brain, is neither conducive to pleasant nor to good shooting. The number of pellets in a charge of 1 1/2 oz. of No. 8 shot is 499. In a charge of 1 1/4 oz. of the same shot there are 419, therefore only 50 pellets more in a charge of 1 1/4 oz. than in a charge of 1 1/2 oz.; and surely the want of the 50 will not cause a good shot to miss his bird with 499 pellets, nor will the addition of the 50 give him any more chance of bringing his bird to bag with his 499 pellets.

I wish now to show to the association, and especially to those members of it who are sportsmen, other applications of these experiments to the art of shooting on the wing.

There are two styles of shooting on the wing—one is called "snap-shooting," where the shooter, on selecting the bird which he wishes to bag, quickly brings the gun to his shoulder and at the instant the bird is in line of sight, he fires. The other style, he determines at the moment of fire the distance to which he should direct his gun ahead of its flight, this distance depending on the velocity of the bird's flight and on his distance from it. This manner of shooting is practiced the more generally by upland gunners in shooting quail, grouse and woodcock.

The other style of shooting may be designated as "the swing shot," in which the shooter swings his gun ahead of the flight of the bird till he attains the proper distance ahead of it, and then fires; but he keeps his gun moving with a regular angular velocity till even after its discharge. This method of shooting is, in my opinion and from my experience, the proper method whenever it can be practiced, and is certainly the only one which has been found successful in the shooting of bay fowl, as ducks, brant and wild geese.

Yet there are sportsmen who will contend that they merely follow the bird with the gun, and discharge it when it is pointing directly at the bird. I put this opinion to the test this summer in the following manner: Four wilets came over the decoys flying in line with a good speed. With my gun I followed the first bird coolly and accurately, and kept the gun moving regularly after its discharge. Instead of killing the first bird, the third from the leader dropped dead.

To give a rule applicable to all gunners for the distance at which a gun should be held ahead of a bird is not possible. Some sportsmen follow a bird, and then after reaching before it the proper distance, suddenly stop the angular motion of the gun and then fire. Others, after following the bird a short distance, give a quick, lateral motion to the gun and then fire. Others, again, bring the gun with a lateral motion ahead of the bird and keep the gun moving till their experience decides the proper distance ahead of its flight, and then fire while the gun is keeping its previous regular angular velocity.

For the simple illustration of the bearing of these experiments on the art of shooting on the wing I will suppose that at the moment of fire the gun is stationary; in other words, that we are firing "snap shots." If the bird has a velocity across the line of sight of 30 miles an hour (i. e., 44 ft. per sec.), and we are using charges in a 12-gauge gun of 3 1/2 drs. of Curtis & Harvey powder and 1 1/2 oz. of shot, we will have to shoot about 5 feet ahead of the bird if it is flying a distance of 30 feet ahead of us, and 10 feet ahead if it is flying a distance of 60 feet, and 15 feet ahead of the bird if it is flying a distance of 90 feet.

These distances ahead for cross shots at birds flying at the rate of 30 miles an hour may appear out of all reason with the experience of many sportsmen; yet if you will place a stick 5 feet long at 40 yards and ask the same gunners if they would hold ahead of a bird by the same length if it were going with them, that they will say, "Of course; that is only about 18 inches," so difficult is it to determine a length at a distance while sighting along the barrel of a gun.

I will conclude with the remark that the study of this paper will not make a good shot on the wing, no more than a description of how to perform on the violin will make an accomplished violinist. But the results of these experiments are of value, and cannot but improve the shooting of an accomplished sportsman if they are practically applied.

It has been said, perhaps rather strongly, "reading and

writing come of schoolmasters, but a crack shot is the work of God."

[From the *ROD AND GUN*, July 31, 1875.]  
THE VELOCITY OF SHOT.

BY J. M. RICE, PROF. MATHEMATICS, U. S. N.

A BIRD at the distance of forty yards is going at full speed (say sixty miles per hour) in a direction perpendicular to the plane of fire; how much shall we hold ahead? It is difficult to find two good shots who will give even approximately the same answer to this question: there are those who will say they allow little or nothing, and others who allow from ten to fifteen feet.

It is obvious that before we can discuss this question to any purpose we must know approximately the velocity of a charge of shot. It is hoped, therefore, that the following experiments will be of interest to sportsmen.

These experiments were made on the 27th of June last, at the U. S. Naval Experimental Battery at Annapolis, Maryland, with the permission and able assistance of Commander Joseph D. Martin, U. S. Navy, in charge of the Battery. The instrument used to determine the velocities was a Le Boulenger Chronograph; the gun, which was fired from the shoulder, was a pin-fire breech-loader, No. 12 gauge, thirty-three barrels, weighing seven and a half pounds.

The chronograph was manipulated, and the observations were taken by Lieut. W. W. Kimball, U. S. Navy, assistant to Commodore Marvin.

The cartridges were not prepared for experimental purposes, but were such as the writer happened to have loaded at the time the experiments were made. In the table below, H. denotes Hazard's Electric Powder, No. 5 grain, and D. denotes Dupont's Ducking Powder. The column headed *Range* gives the distance between the two screens, one of which was about six inches from the muzzle of the gun.

The velocity given is the mean velocity of the shot between the two screens. When the range is fifty feet, it may be taken as the velocity at 25 feet from the muzzle of the gun; and when the range is 100 feet, at 50 feet from the muzzle. The first screen consisted of four very fine copper wires placed vertically about half an inch apart; the second screen was about the size of a sheet of common note paper, and was formed of the copper wire stretched from side to side at intervals of about one-fourth of an inch.

## EXPERIMENTS.

Powder.	Drachms.	Size of Shot.	Ounces.	Range in feet.	Mean Velocity in feet per second.
H.	2 1/2	2	1 1/2	50	1,013
H.	2 1/2	2	1 1/2	100	864
H.	2 1/2	2	1 1/2	150	776
D.	3	2	1 1/2	100	718
D.	3	2	1 1/2	150	655
H.	2 1/2	2	1 1/2	50	995

It will be noticed that the charges of powder were somewhat smaller than those commonly used by sportsmen.

If we assume the mean velocity of shot for forty yards to be 800 ft. per second, the time of flight will be 1.115 sec. A bird flying at the rate of 60 miles an hour goes at the rate of 88 ft. per second, or 13.2 ft. in 0.15 seconds. Again, if we assume the mean velocity of shot for forty yards to be 1,000 ft. per second, the time of flight will be 0.13 seconds, and the distance traversed by the bird, 10.56 ft.

Ducks, when going at full speed, attain a velocity exceeding sixty miles an hour: it would therefore seem that an allowance of 10 or 15 feet, in the case of a duck passing a point under full headway, is not too much, if the distance equal or exceed 35 yards.

Some successful sportsmen have a habit of making an allowance for the velocity of the bird, by jerking the gun forward at the instant they pull the trigger.

The time which elapses between the instant at which the message which causes the finger to pull the trigger is sent from the brain, and the instant at which the shot leaves the muzzle of the piece is finite, and doubtless greater than we are apt to suppose. This interval of time probably varies with different individuals; hence arises a larger personal equation. For this and other reasons it is impossible to frame rules which are equally applicable to all sportsmen. Each, if he would shoot well, must make his own rules, which must be carefully modified to accord with his experience and observation. A tolerably accurate knowledge of the velocity of shot is, notwithstanding, of great service to the thoughtful sportsman.

In these experiments, the time of flight was such as to permit the shot to fall about four inches in going one hundred feet, a distance which is of little importance in comparison with the distance traversed by the bird while the shot is in the air. In the case of most double guns the elevation of the barrel is more than sufficient to compensate for the distance through which the shot will fall in going forty yards. A sight one-tenth of an inch in height, at thirty inches from the eye, will exactly cover a line four inches in length at a distance of one hundred feet. The elevation of the rib of most double guns is greater than one-tenth of an inch.

T. M. Rice.

U. S. Naval Academy, July, 1875.

## GEESSE HUNTING IN THE STUBBLE FIELDS.

THIS is undoubtedly one of the most exciting kinds of shooting a sportsman can engage in. It requires a good shot as well as a bad shooting gun, and he who takes a light weight to the field will not have a heavy bag, but will have a black and blue shoulder and a crazy head instead.

In company with a fellow sportsman we set out with camping outfit, boat, etc., not forgetting our retriever for the ones that sometimes fall just where we could not find them. Arriving at our destination we have our team well cared for, and then taking our decoys we proceed to business—*i. e.*, digging holes in the ground, where we could command a broad view of the surrounding country. All being in readiness, our decoys placed in such a way as to be seen from any point of the compass, we settle "comfortably" back on our seats which we place in the holes, and wait.

In a short time a large flock of geese are seen approaching our quarters. Yes, here they come, for we now hear their sonorous "honking" which makes us "all of a tremble"; and yet we want them to pay us the call. They spy our clever imitations and renew their call, at the same time coming still closer. I now cock both barrels, and as they come within range I let loose, "first the right and then the left," with the satisfaction of seeing the first four old honkers sink to earth and three more quickly follow. They came back

for another shot, but were too far away for my gun. My fellow sportsman (?) stood with loaded gun, looking at me. "Why didn't you fire?" "I was just going to when you shot, and then I thought you had killed the whole flock, so there would be no use for me to waste my powder on dead geese!"

This was not our last sport, for many a time did we send a storm of chilled shot after some wary old gander with splendid success. We hunt for muskrat as well as for the pleasure the sport affords. The place to shoot these splendid game birds is well known to a large number of St. Paul sportsmen, who make annual visits here, and, strange to say, never go home disappointed.

Probably the best place to shoot over decoys is Westport Lake, about ten miles from Sauk Centre, where they congregate in large numbers, taking the stubble fields at early dawn and evening, returning to the lake after breakfast and supper.

Goose Lake is situated in the southeast corner of Douglas County, and its pleasant fields make it a splendid place for the "wild fowler" to recreate about.

A person can reach any of the above named places at the prices named below, which include nearly everything needed in the sport. Fare from St. Paul to Sauk Centre, \$4.50; team and driver to take you out, per day \$2.00 to \$3.00; board at Sauk Centre House per day, \$4.00 to \$5.00; for a good breech-loader per day, \$2.00; boat at the lake per day, 25 cents. We write the above in the interest of the sportsmen, as we have "ground our ax" long since.

We echo J. Frank Locke's statement regarding Swan Lake (in Pitt County), as we have had the pleasure of ducking there in company with Mr. L., who is a true sportsman and a capital shot; always full of fun and the funny.

A terrible snowstorm has been raging for two or three days, and at present writing the snow is from two to five feet deep in places, with some crust. If this continues for a day or two longer pinnated grouse will be entirely exterminated in this section. The geese and ducks have disappeared but will return if it turns warmer. This is the worst storm that the oldest settlers have ever witnessed at this season of the year.

Sauk Centre, Minn., Oct. 18.

DELL.

## PHILADELPHIA LETTER.

SINCE last writing the different varieties of wild duck which generally follow the early coming teal have made their appearance in our river. Although not numerous, black duck, a few mallard, and what is called by our local "gunners" the stiff tail (ruddy duck) have been shot in Howell's Cove, Delaware River, a few miles below the city. They are secured by paddling on the flocks, but, we learn, are extremely shy.

Oct. 15 presented a very busy appearance at our gun stores, the day being the opening of the quail season. Judging from the quantity of shells ordered, and having will be made in the ranks of Bob White, provided the covies this summer-like weather do not find food enough in the yet verdant woods and thickets (which we are sure they will) and take to the stubbles for their morning meal. Your correspondent has always noted that until cool weather has stripped the trees of their foliage and destroyed or covered the food usually found in the woods, the quail will not go to the stubbles, or at least if he does keeps close to his "breakers" for several days. I have recently purchased breech-loaders and increased number of ammunition. Bob White learned to be wise. How often have I impatiently waited till the over-anxious "season openers" have returned from their first campaign, reporting no birds, plenty of mosquitoes and warm weather, (fully knowing the cause of the apparent dearth as I have intimated there will be this October, in regions where ample quail have been bred, and which, later, will be found to furnish capital sport) and going to the same grounds had good shooting.

Delaware and Maryland buyers who have been in our city during the past week tell us an average number of birds have been bred in their States. A law lately passed in Delaware requires non-resident shooters coming to the State to be furnished with a license to be paid yearly. This in a measure protects the farmers from the chicken-killing and fence-destroying "gunners" that overrun the country when the season opens. New Jersey, or at least five counties of the State, insist upon the same license, and although we are of the opinion the law would be found unconstitutional if properly applied, we are not advocating it on account of the good results it has brought about.

Last month an inquiry was made on the part of an English stock-dealer through a captain sailing to and from a British port and this city, to a member of the Philadelphia Maritime Exchange of the proper manner of disposing of a shipment of upward of a hundred sporting and non-sporting dogs in this country, it being the intention of the stock-dealer, or speculator, to try such an experiment. Your correspondent was consulted on the subject, and gave as his opinion the dogs should be sent to N. Y., if sent to this country at all, and disposed of at auction.

Doubtless these animals cannot be from the best English kennels, as dogs of well-known breeds do not go to a begging, and I so stated it, discouraging the enterprise as much as possible. If we want English blood we wish the best, such as have been imported already by our enterprising sportsmen, as many curs may be found there as here.

As a part of my weekly letter to *FOREST AND STREAM* I incorporate a communication from our friend "Hawk Eye," relative to his first shot of the season, and giving his opinion regarding the present early opening.

"Friend Hono.—Every sportsman in this valley (Lehigh, Pa.) will agree with you upon the point you raise against the shooting of quail in October; at least, all those who have been out this fall. It is a scandalous shame to kill such birds as I found on Friday last: they were not more than about half-grown. The first bunch we came across could scarcely fly. I walked in ahead of my dog, saw something slip through the briars, and was about to fling him for standing idle, when one of the old birds rose and some half-dozen 'squealers' undertook to follow, but they made such a poor attempt to get on the wing that the old bird lit again within gun shot, and commenced calling them to her in that plaintive note we so frequently hear in the harvest fields when the great destroyer of her quail, the mower and reaper, goes through a brood of the poor little helpless things. I called my dog and walked away without firing a shot. It was too much like murder to shoot the old bird, and I was too young hardy able to take care of myself. This I did more than once during the day, as the majority of the birds were too small to shoot, and I am fully of your opinion that the season should not commence until November 1. There are more late broods this season in our part of the country than I ever saw before. How do you ac-

count for it? Like you, I shall not do any more quail shooting until later, when the birds can fly; there is no pleasure now, they will not lie for a dog, and are actually not worth carrying when you get them. I think something should be done when the Legislature meets to prevent the wholesale murder of birds, before they can fly, 'pot hunters,' for I do not think any sportsman would be mean enough to carry home such birds as I saw on the opening of the season this year, the law forbids. Write the matter up in the F. and S. and get the views of others upon it. There is another point that can be made in reference to Oct. shooting. As long as we are fifteen days earlier in this State than in some adjoining ones we may expect to be run down with a class of men who shoot for the market and have no other interest in our game birds, and still another class who want and will have a big count of heads and tails, no matter how small they are. I have often thought it was bad policy to have 'phessants' or ruffed grouse come in before quail, for this reason: Parties go out under the pretense of shooting pheasants and woodcock, and shoot quail right along after October 1, because they think and say to themselves, 'Oh, well, it is only a few days to the fifteenth, and if we do not get them this will be my only chance.' There is actually little or no pleasure in shooting grouse before the leaves are off the trees and the birds come in from the flats or barrens where they are now feeding on berries. As soon as we have some cold snaps they will be found in winter quarters, along water-courses and in the ravines. You can't find them there now. I have not seen over a half-dozen this fall while shooting woodcock on grounds where there will be good grouse shooting later in the season."

Your correspondent can assure the readers of the F. and S. that the communication quoted is from the pen of a sportsman thoroughly able to speak on the subject on which he writes, and I am pleased to state he will regularly furnish interesting notes from his section of the country. My first woodcock was killed when in his company, and many a cussing I have received for not doing my part as a beginner quite as well as he did his, an old sportsman. The last time I shot with him, however, I had caught up, and a little bit beyond; but it was merely accidental. Hono.

Oct. 22.

## MICHIGAN NOTES.

CHEBOYGAN, Mich., Oct. 16.

WE are having very good shooting in this county at present. Ducks, partridges, deer and bear in abundance.

The best duck shooting we have is at the head of Mullet Lake, about eighteen miles from town, and Black Lake, about the same distance in another direction. Mullet Lake is a beautiful sheet of water, twelve miles long and six miles wide, and Black Lake is eight miles long and about three miles wide. Both lakes contain several hundred acres of wild rice, affording most ample feed for ducks besides a person would wish, with an occasional chance at a bear. There is a daily line of boats between Petoskey and Cheboygan, calling at the Mullet Lake House from each way.

We have had some very fine sport during the past two weeks shooting plover. There were a great many flocks on the grain fields, and we had fine sport for a few days. They are all gone now and we have turned our attention to duck shooting. A few of the members of the club are getting ready to go over to the Sneau Islands, about twenty-four miles from town on the Straits of Mackinac, to shoot ducks. Late in October ducks congregate there to a very large extent, and the shooting is many times extraordinarily fine. At present our meat markets are stocked with venison and bear meat that has been sent in from parties who have been out hunting for the past two weeks. If sportsmen visiting this place will make themselves known to any members of our club they will be kindly dealt with, and will be posted on the best places for shooting in the country. I will write you the result of the trip to the Sneau Islands so as to let you know how the boys succeeded. P.

## MAINE CAMPING GROUNDS.

NEW YORK, Oct. 23, 1890.

*Editor Forest and Stream:*  
We notice "Lower Bunk's" note in your issue of the 31st in regard to a good camping place in Maine, coast of reaching it from Hartford, etc. Will give you some information for him in crude form for you to present in your own way. The headwaters of the Penobscot afford all that "Lower Bunk" desires. He can reach Houlton, Aroostook Co., Maine, at a cost of not over \$15, the cars running to within a very short distance of the town. He can make Philbrick's Hotel his headquarters for a day or two till he makes arrangements to move into the woods. At this season of the year large numbers of lumbermen are being sent into the woods to cut roads, repair dams, build camp and hovel, etc., and he could get his baggage and provisions, which he can buy very cheap in Houlton, taken in by them very cheaply.

Among many favorable places to be reached from this point we might mention the headwaters of "Jimmy Brook"—a branch of Penobscot. It lies some twenty miles southwest of Houlton in a heavy timbered tract of pine, spruce and hardwood. Along the course of Jimmy Brook for many miles are a succession of dams erected by lumbermen, through which the pine logs are "sluiced," forming deep holes below the dams, abounding with fine trout, which can be caught in the proper season. Partridges are very abundant. Mink and sable are also quite plentiful along this stream and can be readily trapped by rude "dead falls." Moose are plentiful, but are hard to get at. In order to meet with good success in striking moose it is very necessary to employ as guide an Indian or some old hunter, who can be found among the lumber camps which abound along the streams.

BALLARD, BRANCH CO.  
MAINE—Solon, Oct. 23.—The best place in Maine would be hard to find, but there are plenty of nice places to camp out. Probably up the Kennebec River would be as good place as there is in the State. Moxie Pond is a good place; it is six miles from The Forks. The Forks is 45 miles from Skow-

hogan, the terminus of the Maine Central R. R. Stages every day to The Forks. Stage fare, \$8 from Skowhegan to The Forks. Expenses have been to estimate. The first time I went fishing I was gone eighteen days, and my expenses were a little over five dollars. "Lower Bunk" and party better take the most of their clothes with them; pork, etc., they can buy in Maine. The law is on fish-ward. There are plenty of good ponds where game is quite plenty up this way. The further any one goes back from Carrage Roads the better hunting and fishing. If "Lower Bunk" and party come this way I could take a map and show them in five minutes plenty of good places to camp out.

E. M. G.

## LAST ECHOES OF DITTMAR SPORTING POWDER.

SACKETTS HARBOR, N. Y.

Editor Forest and Stream:

I am glad you have exposed the Dittmar Powder Co. I have used the powder two years but am done with it.

E. A. P.

CHICAGO, Oct. 10.

Editor Forest and Stream:

I read your Dittmar powder expose attentively, and I think you have done the right thing in the right way. There is no escaping your conclusions.

M. D. E.

St. Louis, Mo., Oct. 19.

Editor Forest and Stream:

By your expose of the "Dittmar Powder" I confidently believe you have saved many valuable lives, and if sportsmen heed the warning there will be a large credit due you in future.

E. H.

HARTFORD, Conn., Oct. 23.

Editor Forest and Stream:

I join hands with you on the raid on the Dittmar powder. I almost blew my gun to pieces with a cartridge of it one day, and threw away the balance of my canister.

T. S.

PHILADELPHIA, Oct. 23.

Editor Forest and Stream:

Thanks for your timely words of warning regarding the treacherous Dittmar powder. A number of us were just going to send over to New York for a supply to last us during our annual trip West. We, however, prefer to remain intact and will order black powder instead.

E. F. H.

(From the Springfield, Mass., New England Homestead.)

There is young blood at the head of the FOREST AND STREAM now. A late stroke of enterprise is a complete expose of the alleged quality of the Dittmar powder. Mr. Carl Dittmar doubtless thinks by this time that some one at the FOREST AND STREAM office knows as much about his business as he does himself.

WINNIPEG, Manitoba, Oct. 10.

Editor Forest and Stream:

My experience with Dittmar powder has been limited, but quite enough to satisfy any ordinary man. The only time I ever used it after the first discharge it was difficult to open my gun; the second time it was more difficult, and both the heads of the shells (U. M. C.) were torn off. The third time it started the breech of my gun, and this satisfied me that either I did not know how to follow the instructions or there was something wrong with the powder. I would not use the infernal stuff at any price. Fond as I am of shooting I would rather never fire a gun again than use Dittmar powder.

C. H.

BOSTON, Mass., Oct. 22.

Editor Forest and Stream:

Some two months since I loaded sixty brass shells and 100 paper shells with Dittmar powder. Following instructions in reference to having the powder well confined I used a hammer to ram down the two wads over the powder. After reading your articles in reference to Dittmar powder I concluded not to use same, and proceeded to withdraw the charges from the shells. I found the powder caked together so hard in the shells as to require digging out with some sharp instrument. I desire to ascertain if there is any danger of the powder exploding under these circumstances.

BEPRO.

No danger if you use ordinary care in drawing the loads.

PHILADELPHIA, Miss., Oct. 12, 1880.

Editor Forest and Stream:

I received the Sept. 23, Sept. 30 and Oct. 7 numbers of FOREST AND STREAM the day before yesterday, and have been so completely absorbed in your able and satisfactory expose of the "Dittmar Sporting Powder," so called, that I have scarcely taken time to sleep. Unless this "stuff" called Dittmar powder is like the cat that is reputed to have nine distinct lives it is certainly dead for all time to come. It is impossible for me to imagine anything that you could have done that would have brought every sportsman so completely under obligation to you as the course you have taken in this matter. How I wish that I could have seen this exposition of the Dittmar compound before I fired the charge that caused the loss of my hand. It is certainly the greatest fraud and the most dangerous article that has ever been placed before the public. No one can feel more grateful to you for the part you have taken in this matter than myself. Although your exposition of Mr. Dittmar's explosive was too late to prevent the almost entire loss of one of my hands (that I would not have given for all the powder that Mr. Dittmar ever had, or ever will manufacture), it will show to those sportsmen who were disposed to censure me, that I was not altogether wrong in reporting my "Disastrous Experience with Dittmar Powder." If all who have had trouble with this explosive had made a fair and faithful report of the cases the whole thing would have been "squashed" long ago. You have taken considerable trouble to get to the bottom of the cause of these explosions with the Dittmar stuff, but when you consider that many lives and limbs (I will say nothing of valuable guns) may be saved by it, you cannot doubt but that your action will be highly appreciated by all who place any value on their lives.

S. P. Nash.

It would undoubtedly have been to our immediate pecuniary advantage had we acceded to the demands of the Dittmar manufacturers, and instead of impartially investigating the powder, been content with letting them cover up its character. But the FOREST AND STREAM is not prepared to evade, at any sacrifice, its plain duty to its subscribers.

## BLACK POWDER MIXED WITH DITTMAR.—Jersey City, Oct. 1.—Editor Forest and Stream: I perceive that Dittmar powder is coming into use to some extent in the first barrel in pigeon matches, and with good results on account of little smoke. I have used it to some extent during the past year, and found it pleasant and satisfactory to use, but too slow in ignition to give good results in the field or in trap as black powder. This difficulty, I think, is entirely obviated by a mixture of equal parts black and Dittmar to supply the sulphur in black powder to facilitate ignition throughout. It burns full as clean as pure Dittmar, gives only a moderate recoil, gives as good penetration as any (better than the pure article), and materially reduces the volume of smoke. It is for those reasons that I use it in the first barrel in all kinds of shooting, having been obliged to give up the pure article for various reasons some time since. I have been told in a discussion of the subject that priming the shell with say 1/4 dram of black powder, by putting it in first under the Dittmar, will give a quicker burning powder (as quick or quicker than black). I have tried it once or twice, but am unable to say whether it is better or worse from my limited experiments with this. From my understanding of your exposition of the chemical action of explosives it would seem that this would increase the danger by possible detonation, although the method of mixing the powder might be free from objection or this method of action in explosion. Please give me the answer in the future discussion of the question in your paper, or otherwise your views on the action and safety of the equal mixture and the possibilities also in case of imperfect mixing or uniformity of distribution of the different grains in the charge.

SUBSCRIBER.

The mixture of black powder with the "Dittmar Sporting Powder" quickens the explosion of the charge. Whether it increases or decreases the probability of detonation, which is always present when the nitro-cellulose compound is employed, depends largely upon the way in which the two powders are mixed. If the entire charge detonates the explosion would be more disastrous than the detonation of an entire charge of Dittmar alone. To load first black and then Dittmar above it is, as you will understand from our article of Sept. 23, extremely hazardous.

## FIRST EXPERIENCES IN BATTERY SHOOTING.

THE morning of the 20th of October, a day long and wistfully expected, broke cloudy, threatening rain, and consequently, although we had expected to start at some unearthly hour before daylight, we did not get away before six o'clock. For weeks previously our genial host and myself had narrowed down our topics of conversation to haunts, stools, fenders, boxes, floats, etc., and when we got on the ground I was very anxious to see the rig set out, my anxiety being whetted by several and repeated detonations (Dittmar) from the West. As we went down the Bay we drove up an immense flock of ducks, I should think at least seven or eight thousand, and in what seemed a wonderfully short time my battery was out, and all the decoys, 150 of them, on the spot just vacated by the ducks. After some slight equibral difficulty I got into the box and lay down. By the way, *ce ca sens dire*, that all the readers of FOREST AND STREAM know, is that I was not alone.

And now came the critical moment. I had just got nicely settled and peered cautiously over the edges of the box (how it does crack one's neck to do it!) when all at once, from the direction I was not looking in, came whirr, whizz, clatter, about a thousand broadbills, some in front, some behind, right and left, over my head, almost into my face. I made a delirious grab for the gun and did actually manage to knock down two stragglers, but had I any mind forever remain a mystery. So I went on pretty well all day, the ducks seemed possessed to run up to the decoys and get shot—at.

With an innate modesty concerning my own achievements I am rather bashful in stating my score. Suffice it to say that I bagged somewhere near half a hundred broadbills, redheads and coots. Had an experienced gunner had my chance he certainly would have got at least a couple of hundred of the sport-furnishing birds.

In conclusion, as I never keep a cake all to myself, I would advise every lover of the gun, so he be not of pot-hunting proclivities, to his him higher, get in battery and shoot, shoot, shoot till his shoulder aches. There are acres of ducks here, and the new law for Shinnecock Bay, which limits the gunning to three days in the week, will certainly insure capital sport for all, and last, but not least, mine host can take care of a man.

CHALALO.

## ORANGE POWDER TRIAL.

MILBROOK, N. Y., Sept. 25, 1880.

Editor Forest and Stream:

The following is the result of an exhaustive trial of orange powder, manufactured by Laffin & Rand, with Tatham's chilled shot, conducted during the present week. The weather was remarkably fine, just enough breeze blowing to carry away the smoke.

The targets were a counterpart of those which have been used in other gun trials—viz., "a facing of 13 inch pine, 30 inches in width and 40 inches high, on which was fastened by spring clamps the sheet of paper for recording the 30-inch patterns. In the centre of each of these sheets was drawn a life-size tracing of a duck or pigeon, for the purpose of learning and testing of the probabilities of killing game of such size at the various discharges. And in the report of the trial the letter K is intended to indicate whether struck in such a manner as would insure killing, or missed. With small shot, including No. 6, the pigeon was used; with larger shot, the duck, which in outline represented a red-head. Through the centre of the facing was an aperture 7 by 9 inches, in the direct rear of which was the test for recording the striking force of the pellets, which consisted of a rack set at intervals of 3 of an inch, in which slots were placed sheets of straw-board of uniform texture and thickness. At each discharge the number of sheets perforated by any one pellet were carefully noted, and this constituted the record of force for that particular shot."

The recoil was measured by a machine similar to that employed by the London Field some two years ago. "The gun was secured by padded clamps, tightened by thumbcrews, to a hinged slide, which was free to move only in the line of the barrel. The gun's leather strap extended on either side and was fastened by means of a double wedge, which held a solid pad firmly against the heel-plate. This

leather strap took the chief strain of the recoil. Above the gun and fastened at one end to the hinged slide and at the other to the frame work of the machine was a spring balance, on the scale of which, smeared with paint, was recorded the distance to which the gun and slide were driven back by the force of the explosion, and when at rest a constant strain of sixty pounds was kept on the balance. When once in position the gun could be loaded and fired as often as required without removal."

The powder used was furnished by Laffin & Rand and consisted of Orange Rifle, FG, Orange Ducking No. 2 and Orange Ducking No. 4. Tatham's chilled shot Nos. 3, 4, 6, 7, 8 and 9 was used. One of W. W. Greener's new trap guns 10-bore, choked, and weighing 83 lbs., was the weapon.

I confined my tests to chilled shot, as its superiority over soft is now so universally acknowledged that any tests of soft shot for publication would be utter nonsense. Two pink edge wads over powder and one black edge on shot were used throughout, and metal shells exclusively.

In an article of trial I verified satisfactorily that between two perfectly straight cylindrical-bored guns of precisely the same gauge, there is, and can be, no difference as regards the shooting. I have given this question a great deal of time and close attention, and hope to give you at some near day a report.

I have also demonstrated to my satisfaction that Orange powder has no equal, as regards strength and cleanliness. I have experienced in the past six months with nearly every brand of American powder, and would send you a copy of the details if it were not for occupying so much of your valuable space.

W. J. STOKY.

THROUGH THE MAINE WOODS.—Mr. Thomas Sedgwick Steele's canoe trips have now extended over an aggregated distance of more than 600 miles. He has just returned to his home in Hartford from a second tour through the Maine woods. We clip from the Hartford Times the following brief account of the trip:

The party this season in addition to himself consisted of Colonel Lyman B. Goff, of Pawtucket, R. I., Mr. Steele's brother-in-law, and three guides, one of the latter the most celebrated Indian guide in the Maine region. The party left the Kineo House, Moosehead Lake, with three birch canoes, September 13, and reached Woodstock, New Brunswick, October 20, having paddled over four hundred miles through the very heart of Maine.

Those who are familiar with Mr. Steele's work, "Canoe and Camera," which contains the large map two feet square, easily follow this last trip through the west branch of the Penobscot to Chesuncook lake, and thence through the Umbagog, Umbagog, and the numerous difficulties of Mud Pond, Buzzook stream, and the recounted difficulties of Mud Pond, carry to Chamberlain Lake. At this point, last year, Mr. Steele turned south, exploring the mysteries and beauties of the east branch of the Penobscot, but this season the party followed a northerly course, through Chamberlain, Eagle and Churchill lakes. Turning directly east they canoed through Spider Lake, crossed Osgood Curry to Echo and the Mansanguan lakes, and following the windings of the Mansanguan River entered the Aroostook waters. After passing the towns of Masardis and Presque Isle, they landed at Caribou, Maine, where they took cars to Woodstock, New Brunswick, and thence home. The hardest part of the trip was experienced through the swamps and over the mountains lying between Churchill and Echo lakes, which, although only fifteen miles, took the party over a week to accomplish. The season has been the driest Maine has experienced in years, and from first to last the canoeing of the stream was attended with great difficulty. On reaching the head of the Mansanguan stream the party were finally obliged to camp several days and build "shoes" or sleds for the three canoes. For over thirty-five miles the canoes were dragged through the bed of the streams before they reached sufficient depth of water to float them, making an unexpected delay in the tour. The first cold snap of the season occurred September 24, while the tourists were in camp on Churchill Lake, forming ice an inch in thickness. The next day a heavy frost about the borders of the lake. They captured thirteen otter, beaver and mink, besides other game and fish. The journey was double the length of last year's, and the autumn scenery was equally enchanting. The tourists made several important geographical discoveries along the trip, which will be of interest hereafter.

CARELESS HANDLING OF A GUN.—The English journals report another lamentable accident from carelessness with a gun, the victim being a soldier of high standing and a V. C.

We consider it a duty to chronicle such accidents in order to impress upon each reader the possibilities which exist with the habitual use of a gun. We can none of us be too careful. The following from the London Telegraph bears directly on this point:

Another lamentable gun accident is recorded, causing the death of a gallant soldier and wearer of the Victoria Cross. Col. Hackett, late of the Royal Welsh Fusiliers. A rabbit-gun has destroyed the valued existence of a man who was present at the siege of Sebastopol, obtained the medal for the assault on the Redan, served all through the Indian mutiny, and won the badge for distinguished valor at Lucknow, where he rescued a wounded corporal of his own regiment, in spite of a heavy fire from the enemy. The deceased officer had been out rabbit-shooting, and in getting over a hedge appeared to have been careless enough to drag his gun through by the barrel, whereupon the piece exploded, and its contents lodged

in his body. Only a week or two ago a similar casualty took place in India, when the son of the Lieutenant-Governor of the North-west Provinces, Sir Ashley Eden, lost his life in the same way. Taking a loaded gun, he attempted to kill a snake by hitting the reptile with the butt-end of his weapon, forgetting the dangerous character of the instrument he was using. The gun went off, and the result was another pitiful death of a man in the prime of life through the incautious handling of fire-arms. Who does not remember the terrible accident which put an end to the career of the celebrated African traveler and explorer, Capt. Speke? Yet such casualties ought not to occur, and would not occur if a reasonable amount of caution were exercised. Surely, in view of the sad waste of valuable life which happens every year through this cause, it is time that sportsmen and all who take a gun into their hands should remember that they are carrying sudden and violent death about with them, lurking somewhere between the stock and the barrel that they handle so confidently.

**A HINT TO FARMERS.**—In the confessions of Fitz-Boodle, by the late Mr. Thackeray, he outlines a series of remunerative professions which may be made available to strengthen and fortify a slender income. To this end there is a profession open to our farmers of which they have not with any degree of intelligence devoted themselves—the cultivation of quail.

Many agriculturists possess farms of one hundred acres and upward. The land is available in almost every instance to the habitat of this bird. While the average American may ignore and defy the game-law, the law forbidding trespass enjoys in his eyes a slight respect. Now if every farmer, the possessor of land conforming to the necessary conditions, will encourage the propagation and protection of quail on his own premises, he will secure to himself within a brief period a most profitable crop and one which, less than any other, is subject to the vicissitudes of the weather. If he will erect suitable shelter at different points for the quail, where they may be fed and seek refuge during the storms of winter, if he will see to it that nests be not robbed and the incubating birds killed; that hawks, owls and other vermin are driven off—he will in the autumn find ample remuneration for his (trivial) labor. Let him but insert in a city journal an advertisement stating that upon his grounds may be found so many quail; that individuals, for whom he will find accommodation for so much, may for so much kill so many birds per day per man, and no more, he will promptly receive a remunerative return. He is also enabled to make a very comfortable and conform outwardly to the conventional forms required by rural ethics, he may, without loss of reputation, add still more to his revenue by putting the odds in dollars on the quail as against the sportsmen.—*Gaston Fay, in Harper's Weekly.*

**VIRGINIA.**—Warrenton, Oct. 20.—This fall will be a good one for the sportsman. The number of partridges and all kinds of game, thanks to a strict enforcement of the game laws, has increased enormously the last four years. From all sections of the State there comes the intelligence of good sport ahead, and in the upper part the slaughter of the birds has begun. But the late summer and intense heat of the present renders bird shooting so uncomfortable, that not until the 1st proximo will the real work begin. In all the tide-water counties of Virginia partridge shooting commences on November 1 and closes February 1. In all other sections of the State the open season is from October 15 to January 15. Gentleman sportsmen desiring to hunt will find good quarters and fine grounds on the bottoms and low grounds of the Rappahannock River. There is no better in the State. Write to George Myers Warrenton Springs, Fairfax Co., Va., for information. For deer hunting, quail and rabbit shooting, apply to Capt. William Blow, Littleton P. O., Sussex Co., Va. For ducks, geese, brant, Cobb's Island is the best place. Cobb and Spady can tell you all you want to know.

Sportsmen coming into Virginia are all welcome. Every farmer will give them full and free permission to hunt upon their lands. It is only the pot hunter that they are down upon. One who has a dog, and charges nothing for a dog, the dog, the second and third pay a small price. It is strange that the Virginia Midland Road does not follow this liberal example, for by charging a high tariff on pointers and setters it kills the goose that lays the golden egg, and keeps many sportsman away. It ought to be their object to induce the sportsmen to travel on their road, and to hunt all along its route; but by taxing his dog they repel thousands of huntsman annually from taking the trip. It is a penny wise pound foolish policy, for every dollar made by charging the dog they lose a hundred from their masters, who would cheerfully pay full price for themselves, but who hate to be imposed on.

**LATER.**—The day after writing you the Va. Midland R. R., on my representation, issued an order that dogs should not be charged, but carried free. CHASSEUR.

**CONNECTICUT NOTES.**—Windsor Locks, Conn., Oct. 25.—Partridge shooting has been dull for some time past, though there were a good many birds killed between Sept. 20 and Oct. 1. At Granby and East Granby quail shooting has been good all through the season. Quail are scattered considerably now, and cannot be found in bevis of more than six or seven, where three weeks ago the flocks had from twenty to thirty in. This is due more perhaps to boys and amateurs than to sportsmen, for the poor birds have been actually nearly scared to death. Woodcock are very scarce, a single bird being now and then raised. Gray squirrels are plenty, but are not found much in their old haunts, the scarcity of walnuts driving them out over quarters. A hunter went out the other morning from Warehouse Point, and came in with eleven mice. Just about here snares are not set, but in Windsor and East Windsor they are said to be plenty. We have a horror of that mode of warfare. A recent visit into Litchfield County gave us some rare sport in moving and shooting partridges and quail. In two days our party moved over forty birds. We paid a visit to Green Pond, a lovely but lonesome sheet of water lying in Sherman, in Fairfield County, and had some fine times there. Mr. Charles H. Andrieux, a prominent New York sportsman and fisherman, spent much time in summer there and has a smaller pond and brook inlet nicely stocked with brook trout, and has them, protected by Connecticut statutes. Mr. Andrieux is an invalid, and finds much relief in that section. LOWER BUNK.

**CHICAGO.** Oct. 23.—The storm of last week started the ducks South in large numbers, and it is said that more ducks

have been seen in this vicinity than ever before in so short a space of time. On Saturday last a number of our popular sportsmen made for their favorite shooting grounds, and the result of one day's shoot is given below: At Calumet, Mr. Abe Klineham killed 183 ducks, his brother Henry 136, and Mr. Heiser about 140; same day, at English Lake, Abner Price bagged 52 and John Gillespie 45; at Tolleston Lake, F. A. Howe, Esq., President of Tolleston Club, brought down 91 ducks and a goose; at the Makawsha Club marshes, Mr. Toll-B. Organ brought to bag 60 ducks. All of the above were products of one day's shoot, besides numberless others that I have no record of. At Fox Lake the shooting has been equally good. This evening a party consisting of the following well-known gentlemen start North for a deer hunt: Charles H. Mears, Milton Oliver, John Cowles, Lem. Brown, Jonathan Slade and Henry Sloan. They leave on the 5 P. M. train, via C. & N. W. R. R., for Oconto, Wis., thence about sixty miles up the river into the woods, where they go into camp for a two weeks' hunt. A more jolly party cannot be imagined, and with a "stand-pipe" in the party, the deer are liable to be brought to the coles, and no doubt they will be delicious morsels to the anxious sportsmen. Success attend them! Mr. Geo. B. Mansfield, of Connecticut, called this morning, fresh from a tour among the mountains of Colorado. He reports excellent sport among the deer since the first fall of snow. J.

**ILLINOIS.**—Buda, Oct. 18.—I see many reports from different sections of the United States as to the prospect for the fall shooting, and will tell how the game is in this section, 118 miles southwest of Chicago. We have the benefit of two good ducking grounds, one being a large swamp lying northwest of here, and the other quite an extensive lake, some fifteen miles southeast. Since the cold snap and high wind of the last few days the shooting has been most excellent, mallard being in the majority. No geese or brant have come in yet. Quail are abundant; jacksnipe and plover are plenty, and prairie chickens seem to get thinned out very slowly. Farmers are opposed to the gunners shooting on their farms, for the average city hunter never closes a gate or puts up a rail after he has passed through, and in many cases fences are kicked down regardless of the stock and crops of the honest farmer. F. E. C.

**MICHIGAN DUCK-SHOOTING.**—Grand Rapids, Oct. 21.—Ducks are very plentiful on Indian River in the northern part of this State. One day last week three gentlemen bagged 161 as the result of a day's sport. This river is a connecting link between Burt and Mullett Lakes, and which, with the B. V. and C. L. Ry., Crooked Lake, Crooked River and Cheboygan River, form what is known as the "Inland Route." The distance from Petoskey (northern terminus of the Grand Rapids & Indiana R. R.) to Cheboygan, via this route, is about fifty miles. If the reader will refer to a late map he will find them shown as follows: Crooked Lake, Crooked River, Burt Lake, Indian River, Mullett Lake and Cheboygan River. Near where the Indian River empties into Mullett Lake, probably a row of half an hour, is the Lake View House, where sportsmen will find good accommodations within easy reach of good sport. The editor of the Petoskey Record, passing through Crooked River a few days since, saw four handsome deer from the steamer. The region cannot be too highly commended to the tourist and sportsman, being easy of access, with very low round trip rates from June 1 to Oct. 31, which are offered by the G. R. & I. R. R. Co. To the sportsman or pleasure-seeker the trip through the "Inland route" is one to be "marked with a white stone," forever after. A beautifully illustrated guide will be published next season fully describing this and kindred attractions of Northern Michigan, which can be obtained free by addressing the General Passenger Agent at Grand Rapids, Mich. F. J. M.

**GAME IN THE ADIRONDACKS.**—It is singular that almost all our sportsmen who go to the North Woods do so at a season when game is scarce. According to our Northern exchanges now is the finest time of the year to be there. Hunting up in the Adirondacks is unusually good at present. The deer are plentier than they have been before in many years; the woods are fairly alive with partridges, and the ponds and lakes in remote regions offer wonderful attractions to the duck shooter. A letter just received from Moose Lake, about forty miles from North Creek, says the hunting there was never better. Elijah Camp, the noted Indian guide, while out on a long tramp last week, discovered three large ponds within four miles of his shanty at Moose Lake that had probably never before been visited by white men; in all his journeys through the wilderness in that region he had never before caught a glimpse of them, nor to his knowledge had any other sportsman. Last fall I was informed that two deer, of number and docility of the deer he had found around the pond, which, he says, exceeded anything that he had previously noted in all his experiences in the North Woods.—*Ithaca Journal.*

**NO DUTY ON WILD RICE.**—Harcourt, Oct. 20.—*Editor Forest and Stream:* One of the greatest drawbacks to the sale of my wild rice in the United States has been the duty of two cents per pound, which I now find has been unjustly levied upon it. Last fall I was informed that the two cents per pound was the duty, and I advertised the fact, feeling some doubts upon the subject. I secured the services of a friend, and he, making some inquiries at the Custom House, received as answer a note, of which the inclosed is a true copy. Please publish this and the inclosed letter in justice to your readers and myself. CHAS. GILCHRIST, Fishery Inspector.

"CUSTOM HOUSE, ROCHESTER, N. Y., October 15, 1880."

"E. O. Burton, Collector of Customs: "Dear Sir:—Referring to the duty on 'wild rice,' I am instructed by Mr. Galusha to say that there is no duty on the same. Very truly, W. WALLACE, Deputy Collector."

**TENNESSEE GAME.**—Nashville, Tenn., Oct. 19.—The quail season is now fairly open, and our sportsmen are having a good time. Birds are very abundant and the weather all that could be desired. Buckholz has a trio of beautiful dogs—"Prince," a pure Laverack; "Jeff," a red Irish setter; "Belle" and "Ivite" pointer. The latter is a prides worth mention, as he stood and retrieved the first bird he ever saw. H. C. Pritchett, Esq., is out very often, and being one of the crack shots of our town, never fails to bring home a full bag. The beautiful moonlight nights we are now having induce our lovers of fox chasing to be on the *qui vive*, and often the delightful music of a pack in full cry can be enjoyed by the

less fortunate inhabitants of the city. Col. Johnson's pack is as fine as any in the State, and a run after them is a joy not soon forgotten. Game is beginning to be brought in from Reelfoot Lake. This is undoubtedly the best hunting and fishing grounds in the South. J. D. H.

**WHERE TO GO FOR LARGE GAME.**—St. Elmo, Chaffee Co., Colo., Oct. 14.—Deer, elk, bear, mountain lion and smaller game are very plenty in the mountains between Canon City, in Fremont Co., and the South Arkansas, in Chaffee Co., Colorado. Most of the deer (black tail) have left the Continental Divide, crossed the Arkansas River and entered the mountains between the river and the South Park. For good sport among all kinds of large game and with the easy access by railroad it is hard to find any that will beat Texas Creek, Pleasant Valley and Badger Creek along the line of the Denver & Rio Grande R. R., from thirty to sixty miles from Canon City. If any Eastern sportsman wants to try his favorite ride on elk, black tail deer, mountain sheep, antelope, cinnamon and black bear, mountain lion and smaller game, why all he has got to do is to get a camping outfit and good blankets and come to one of the above-mentioned points and he will find plenty of game. H. H. H.

**LONG ISLAND SPORTSMEN'S ASSOCIATION.**—The Executive Committee of this Association will meet in the Royal Arcanum Room, in Music Hall, at junction of Fulton and Flatbush avenues, Brooklyn, on Friday evening next, Oct. 23, at 8 o'clock. At that time an estimate of expenses of next State Convention will be presented as a basis of assessment on subscribers, and the Subscription Certificates will be ready for delivery. Prize Committee to be appointed. Reports from committees on ground and traps will be expected. The Washington Gun Club Quartette are invited to be present to sing sportsmen's songs. Every member of the association is cordially invited to attend. ABEL CROOK, Secretary L. I. S. A.

**SABBATH MARAUDERS.**—New York, Oct. 25.—*Editor Forest and Stream:* For the last three Sundays parties have been going to Pascack, N. J., and openly violating the game laws, not only by shooting on that day, but by killing quail and other birds protected by the laws. If they had been arrested last Sunday it would have cost the party \$472 for fines, yet no one interfered. I procured the services of a constable and searched every train Sunday evening and this (Monday) morning. We found one party, but they had no birds and were badly frightened. I also got a Justice of the Peace to try them, but they told him they shot that day he would arrest them, so probably they will now give it up; but it shows how little our game law is enforced. W. HOLBERTON.

**PATTERN.**—Philadelphia.—*Editor Forest and Stream:* Have just read "St. Clair" on gun trials. I think he must have run into an extraordinarily fine lot of guns or his 40 yards must have been very short measure. I do not doubt but what in a very great while guns can be found to put 361 shot in a 30 inch circle with 1 1/2 oz. 8 shot, but I am sure if you go to buy an ordinary B. L. gun with the expectation of getting one to make the above pattern at 40 yards with 1 1/2 oz. shot, full choked, 99 times out of 100 you will go home with the impression that your gun is inferior to many. I think. The above pattern would be extraordinary with 1 1/2 oz., and I am sure that your readers can convince themselves by testing their fine shooting guns in public. J. R.

**A NEW HUNTING GROUND.**—Owen Sound, Ont., Oct. 18.—Think some of your readers would like to know a new hunting ground for deer, bear and other large game. To get to it start from Owen Sound in a rig, travel about 15 miles to Oxenden, northeast; there shoot for a few days, then continue up the Peninsula about forty miles to Lion's Head. Go back from five to fifteen miles from this place and deer, bear, etc., are to be found in dozens, not to speak of fish of almost every variety. The whole country is covered with small deep lakes. Or take the boat from Owen Sound to Lion's Head. There is a boat twice a week. Housh.

**NEW YORK.**—Hayt's Corner, Seneca Co., Oct. 19.—In Romulus and Ovid game is how quite scarce; quail having been killed off so close last year there are but few to be found anywhere in Seneca County. Partridge are scarce; a few plover have been seen though none brought to bag to my knowledge. Sunday shooting, I am pleased to state, has gradually diminished; there are a few yet who will get out of sight of more sensible and civilized men, and bang away with old muskets etc., much to the disgrace of the community wherein they reside. L. E. N.

**FOREST AND STREAM GENERAL PASSENGER RECORD.**—East Saginaw, Mich., Oct. 15.—The following is a list of hunters that went "up into the woods" via the F. & P. M. R. R., for the week ending Oct. 15:—Mr. Dye and party of 41 from Dayton and Columbus, O., to Reed City; party of 6 from Union, Mo., to Ogenaw; party of 4 from Columbus, O., to Roscommon; party of 12 from Dayton, O., to Harrison; party of 37 from Toledo and northern Ohio, to Cayuga, Mantion and vicinity, making a total of 105 in six days.

**CHICAGO, ILL.** Oct. 20.—En-route to the hunting grounds of Michigan, via the Ch. & N. W. Ry., are: W. C. Girard and party of twelve from Lebanon, Ind., going to Quinnesec, Mich.; G. L. Barnes and party of four, from Equinunk, Pa., going to Florence, Ind. The following party is en-route today to the hunting grounds on the Chicago & Northwestern R. R.: J. Gregory and party of ten, from Zainsville, O., going to Quinnesec, Mich. W. H. S.

**INDIANA.**—Vincennes, Oct. 19.—Quail are not as plenty this year as usual, in fact, there are not half the number in the lower part of the State as there were last year. The weather is fine, but the marshes are very dry. H. S.

**CANADA.**—Perth, Ontario, Oct. 19.—I am off to-morrow for a hunt, fifty miles North, and on my return will probably drop a line to FOREST AND STREAM on deer hunting in Canada. A. C. S.

**CURRIEBOOK.**—A party of sportsmen passed through this city last Tuesday en route to Curriebook. Among them were Messrs. W. A. Croyden, A. H. Cleveland and J. C. Baues, of Massachusetts. They had their dogs with them and were equipped for an extensive campaign. As they are all good shots we shall look for reports of a big bag.

## PENNSYLVANIA FIELD TRIALS.

THE first field trials held under the auspices of the Pennsylvania State Field Trials Association were commenced on Tuesday, at Quarryville, Lancaster Co., Penn. Among the well-known sportsmen of the State and the Eastern cities present were: B. J. McClure, J. R. Stayton, Secretary of the Association; J. R. Hendricks, J. C. Beerringer, J. S. McIntosh, James Verner, Ed. Gregg, B. F. Wilson, H. M. Short, Walter Passavau, D. McK. Lloyd, J. Palmer O'Neil, President of the Association; F. A. Tremaine, of Pittsburg; W. A. Coster, of Flatbush, L. I.; M. G. Dixon, of Philadelphia; T. S. Thompson, Thompson, Pa.; Albert A. H. Meredith, of Boston; J. M. Taylor, of Lexington, Ky.; Jos. J. Snellenburg, of New Brighton, Pa.; W. L. McConnell, of New Castle, Pa.; Wm. Seager, of Glenfield, Pa.; T. A. Smith, of Stockholm, N. J., and Geo. W. Porter, Jr., of Harrisburg, Pa.

An early start had been arranged. A special train had been chartered to run down to Quarryville, a small village which lies about fifteen miles to the southeast of Lancaster, and at nine o'clock we found ourselves pushing down with the judges, contestants, dogs and a number of the residents of Lancaster, among whom was F. A. Diffenderfer, in whose lands the arrangements of all the detail of the trials had been placed. It was not until eleven o'clock that the destination was reached. Before going on the grounds a glance at the official entry book showed that it had closed with 43 entries, of which 17 were in the All-aged Stakes, 13 in the Puppy, 4 in the Nursery and 9 in the Association. The following were the

## ENTRIES—ALL-AGED STAKES.

J. R. Stayton, Pittsburg—Setter dog Belton III. (Belton-Floss), b w and t.  
J. R. Hendricks, Pittsburg—Setter dog King Dash (Belton-Floss), b w and t.  
Isaac Yearseley, Jr., Coatsville—Setter bitch Roxey (Leicester-Tamboro's Nellie), b and w; setter bitch Countess (Leicester-Poochontas), b and w; setter bitch Little "Lady" (Dash III-Roxey), b and w.  
Wm. Seager, Glenfield—Setter dog Doctor (Macdonald's Ranger-Pern), b w and t.  
H. C. Steinhilber, Middletown—Setter dog Pat No. 2 (York-Countess), red; setter bitch Diddy (York-Countess), red.  
J. J. Snellenburg, New Brighton—Setter dog Butten (Bob-Fair), l and w; setter dog Thunder (Pride of the Border-Fairy II), blue belton; setter bitch May Laverack (Thunder-Spot), b and w.  
L. Shuster, Jr., Philadelphia—Setter bitch Cornelia (Leicester-Tamboro's Nellie), b and w.  
W. L. McConnell, New Castle—Setter bitch Lady Laverack (Thunder-Peerses), l and w.  
F. A. Diffenderfer, Lancaster—Setter bitch Leah (Royal-Livy II), b and w.  
F. W. Seiler, Harrisburg—Setter dog Dash (Colburn's Dash-Mul-len's Belle), b w and t.  
E. A. Givens, Pittsburg—Setter bitch Mierva (Leicester-Nellie), b w and t.  
Samuel S. Brown, Pittsburg—Setter dog Dash — roan.

## PUPPY STAKES.

Isaac Yearseley, Jr., Coatsville—Setter bitch Little Lady (Dash III-Roxey), b and w; setter bitch Bess (Penu-Poochontas), b and w.  
W. A. McIntosh, Pittsburg—Setter bitch Abbey W. (Elcho-Gipsy Queen), red.  
Wm. Seager, Glenfield—Setter dog Mack (Hake-Para), b w and t.  
J. J. Snellenburg, New Brighton—Setter bitch May Laverack (Thunder-Spot), b and w; setter bitch Lady Laverack (Thunder-Peerses), lemon belton; setter dog Dick Laverack (Thunder-Peerses), blue belton.  
W. L. McConnell, New Castle—Setter bitch Lady Laverack (Thunder-Peerses), b and w.  
Geo. W. Porter, Jr., Harrisburg—Setter dog Dart (Seiler's Dash-Porter's Bessie), red and w.  
Edward Gregg, Pittsburg—Setter dog Bob (Stoddard's Bob-Nellie), red.  
D. McK. Lloyd, Pittsburg—Setter dog Ned (Stoddard's Bob-Nellie), red.  
F. A. Diffenderfer, Lancaster—Setter dog Roxey Boy (Dash III-Roxey), b and w.  
J. M. Speer, Harrisburg—Setter dog Count, black.

## NURSERY STAKES.

J. R. Hendricks, Pittsburg—Setter bitch Dolly Edwin (King Edmore-Carture), liver.  
Wm. Seager, Glenfield—Setter dog Smart (Hake-Para), b and w.  
J. J. Snellenburg, New Brighton—Setter dog Pet Laverack (Thunder-Peerses), blue belton; setter bitch Sue Laverack (Thunder-Peerses), lemon belton.

## ASSOCIATION STAKES.

J. R. Stayton, Pittsburg—Setter dog Belton III. (Belton-Floss), b w and t.  
J. R. Hendricks, Pittsburg—Setter dog King Dash (Belton-Floss), liver w and t.  
J. L. McIntosh, Pittsburg—Setter dog Biz (Dash-Flora), red.  
J. J. Snellenburg, New Brighton—Setter dog Thunder (Pride of the Border-Fairy II), blue belton; pointer dog Butten (Bob-Fair), liver and w.  
Isaac Yearseley, Jr., Coatsville—Pointer bitch Rosey (Leicester-Nellie), b and w.  
W. L. McConnell, New Castle—Pointer bitch Lady Laverack (Thunder-Peerses), lemon and belton.  
E. A. Givens, Pittsburg—Pointer bitch Mierva (Leicester-Nellie), b w and t.  
Samuel S. Brown, Pittsburg—Pointer dog Dashi (———), roan.

The judges were Major J. M. Taylor, of Lexington, Ky.; B. F. Wilson, of Pittsburg, Pa., and Washington A. Coster, of Flatbush, L. I.

TUESDAY, OCTOBER 26, 1890.

ALL-AGED STAKES, at 510 each. First prize, \$100; second prize, \$50, and third prize, \$25.  
Stoddard's Pat against Brown's Dash.  
Stayton's Belton III. against Shuster, Jr.'s Cornelia.  
Snellenburg's Thunder against Yearseley's Roxey.  
Diffenderfer's Leah against Snellenburg's May Laverack.  
Seiler's Dash against Hendricks's King Dash.  
Yearseley's Countess against Snellenburg's Butten.  
McConnell's Lady Laverack against Yearseley's Little Lady.  
Seager's Doctor against Stoddard's Bob.

Shortly after eleven o'clock the race was ordered down, and Pat, handled by T. W. Ferrington, and Dash, winner of second in the free-for-all at Patuka, DL, in the N. A. F. trials of last year, by H. M. Short, made the start. The weather in the morning was clear, with a good scudding wind blowing from the southward, but later on clouds began to thicken and the rain to patter down, and the scarcity of birds made the first day's work extremely tedious; so that at the end only two heats had been run and one remained unfinished. We saw at once that the trials had been arranged for too early a date, the birds were said to be under size, the frost had not cut down the rank grass in the old fields nor trimmed the trees, and many of the farmers were at work in their fields, which more or less disturbed the birds and drove them to the woods. Added to this, the birds had been shot out, and with one exception the best were broken ones. The best lay through several beautiful valleys, such as only seen in the Keystone State, the long stretches of flats being hemmed in by rolling hills, covered with highly cultivated farms, many of which were

so tidily kept as to deprive even the fence rows of the slightest cover. The first field was an old clover lot; the dogs were slipped at the leeward end, and it was down blank. When half way down the next field was shot. But the dog was by far the better, pointed, the next ground was a field of corn, but the dog was not so much ordered; and this field also proved a blank. The next field was a rag-weed one, and in it a bevy of birds had been scattered by a local hunter. He was requested to leave, but not before he had shown where he had left the birds at the woods. In the next scrub oaks the judges ordered the dogs, and the bottom, which was covered by the lately fallen leaves, proved a poser, for neither of the dogs showed game. A cornfield was then beaten out, Dash quartering his ground with good speed, and showing excellent style as he went to his work. Pat also seemed under good command, but was behind the scenes alongside of Dash. An hour had now elapsed without a find, when a shout from the noble army of spectators announced that a bevy had been flushed by the crowd. It was then learned that five birds had been marked into some chest-nut sprouts. The dogs were ordered into the brush, and Dash at once found and pointed magnificently. Pat was given a chance to back, which he refused to do, working up instead and sharing the point in an uncertain way, which resulted in a flush. The dogs were ordered up and the heat awarded to Dash.

Belton and Cornelia were then called, but the latter was not forthcoming.

Thunder and Roxey came next, handled by their owners, and commenced operations in a fine rag-weed lot. Thunder went like lightning, showing great speed, and the obeying flush, which going over about half the ground. At the far end Thunder suddenly stopped and drew on at his belly and came to a drop. Roxey refused to back, indeed she seemed to have no notion when it came to the gun was ordered to flush, but pulling back a moderately free road was found. In the sloping corn-field was tried without success, but at the bottom, in a springy meadow, a looker-on flushed a fine bevy, which skirted some low alders and pitched into the woods beyond. The rain was now falling fast, and the crowd, in taking shelter in a copse, flushed the remnant of another bevy. The judges ordered the dogs into the woods, and Thunder had no more than crossed the fence when he made a dropping point. A short delay occurred in giving Roxey a chance to back, which she did not, nor, in crossing ahead of her, did she show any game. The bird was then ordered to flush and kill, but no birds were moved. It was evident that Thunder pointed where a bird or more had struck, but had refused to lie on account of the wet leaves. If it was not a false point it was next door to one, and we think he should have gone on after due time and tried the birds to where they were eventually flushed by the nose seventy yards away. A move was then made for the other bevy, which had scattered along the fence. Thunder got a capital point at once, and Mr. Yearseley claimed a point for Roxey on same bird. The bird was then shot, and the dog was not recovered. Three more panels of the fence further on Thunder pointed, but he was not a rabbit. In the next field when the dogs were up, Mr. Snellenburg moved a broken bevy and killed a bird quite wide of him, which Thunder located and retrieved in first-class style. The dogs were then ordered up and the heat awarded to Dash.

Leah and May Laverack, Seiler's Dash and King Dash were called in order, but one or other did not respond, it having been understood that the all-aged stakes would not lead off in the trials.

Countess and Butten fell in, the former being handled by T. E. Smith, and the pointer by his owner. A fruitless search over several miles of lowland was made, and it was not until the starting point of the morning was reached that a feather was found, the little bitch then flushed one bird deliberately. To sum up the characteristics of the two dogs, the little bitch showed a need of a deal of handling. She was fast with plenty of bottom, and what is ever valuable in a dog, she did not lack persistency. There was everything to discourage, and yet she was full of go to the end. Her action was good, her shape was too low to suit some, but not for us. The pointer was good, her nose was good, and she was fast. The dogs were ordered up for the day. In next week's issue we will give the full account and finish of the trials.

## CURRENT DOG STORIES.

## I.

The Council of Brantford township have recently offered a fee for each dog killed. One innocent old gentleman slew a cur, and, instead of lopping off the tail, carried the carcass bodily before a magistrate and got his check. Then, taking the body away, he cut off the tail, exhibited it and got another check. Yet once more he tried the venture, and this time it was to cut off and present the head, and he got still another check! Another spotless youth of ten summers drowned a litter of pups and got \$2 apiece for their tails.—*Paris, Ont., Transcript.*

## II.

John T. Raymond had a curious experience at Lincoln, Nebraska, while acting in the trial scene as *Colonel Sellers*. Two dogs began to fight in the centre aisle of the theatre, and all attention was instantly diverted from the stage to the fight. "I move we suspend proceedings in this court," said Raymond, "and I'll bet a dollar on the white dog." "I'll take you," cried a man in the audience. The white dog won, the dollar was passed across the footlights to Mr. Raymond, and the acting of the play was resumed.—*Evening Post.*

## III.

An interesting fight was seen at the waterworks this morning. Superintendent Hamilton has a small terrier dog that knows every nook about the works, and knows where things belong. This morning an alligator got out of his cage and started for the river. At the time the dog was playing along the water's edge. It saw the alligator as it was about to enter the stream, and immediately comprehended the situation. The alligator was out of its proper place, but there was no time to give an alarm. The dog immediately started for the scaly trespasser and caught it by the tail. A bitter fight then ensued. The dog attempted to pull the alligator up the bank to its cage. It also appeared to try and give an alarm, but seemed afraid to open its mouth lest its hold would slip and the alligator would get away. At this point in the battle the tide turned. The alligator caught the dog by the nose and gave him ample time and cause to raise an alarm. The dog did so. The men who had been witnessing the affray came to the dog's rescue. Their appearance frightened the alligator, which released its hold and endeavored to get away. The dog again seized it by the tail, pulled it to the bank and held it securely until the men could put it into its cage.—*Indianapolis News.*

A mutilated five-dollar note was received at the Treasury to-day from Marion County, Indiana, and redeemed. Accompanying it was the following affidavit: "Before me, John E. Soot, a notary public in and for said county and State, come Walter Rivers, who, being duly sworn, deposes and says that on or about the 24 day of September, 1890, in the city of Indianapolis, a dog owned by the deposant did feloniously and with malice intent seize a five-dollar bill numbered B 256,460, series 1875, and bank number 40, and after chewing off the right-hand lower corner and the entire left-hand edge of the aforesaid bill, in spite of all due effort on the part of the deposant, succeeded in swallowing the same, and no amount of after effort in choking the aforesaid dog availed to re-

party, who bit viciously at the gates as we passed. The Dalmatian or carriage dogs, black and white spotted fellows, with lavender eyes, are the Princess's favorites, and she has one constantly with her. A party of very raggy Skye terriers were next to a beautiful Chinese dog, the face-simile in color and almost in shape and size of a young lion. The Scotch collies, with their black, wavy coats; the ugly brown and white setters, with their great whirling, and "Charlie," a tremendous black-furred, climbed like a cat up the rough trunk of a tree which was firmly fastened in the centre of the pit. Reaching the top, on which was a board about two feet square, he rose on his hind legs, balancing himself carefully, and begged for a cracker. He was not more than his own length from us, on the same level, but, poor fellow, even with temptation, he was incapacitated from making a jump by his clumsy body. When he descended Polly took her turn, and begged in quite a coquettish way for a bit.

"Then the American boys, given to the Prince by the Duke of Manchester," said the keeper, adding, with a sort of awe, "I suppose you see them most every day there, ma'am." Then we called at the monkey house, and saw the queer, uncanny little animals the Prince brought from India with him, and, in addition, a cage of white rats and white mice, which, said the guide, "the Princess brought from Jamaica, for they are regular boys and like anything that runs on four legs, even these nasty creatures," he concluded, with an air of infinite disgust. Leaving the monkey house we walked some distance to the next row of stalls of red brick and white facings, where a dozen or more of beautiful Alderneys are kept, and on to the prettiest little cottage that could be devised, known as the "Princess's Dairy."

"Imagine a tiny building of brownish-red brick, jutting out in quaint little gables, miniature bay windows, and odd porticoes, and fairly festooned by some beautiful vine with feathery foliage and great purple star-like blossoms, tangled up with damask roses and sprays of ivy. Then think of a beautifully carved bar of Swiss workmanship, like size, with a basket on his back ready to hold the inevitable milkbells. Then open the door and you find yourself in the tiniest sort of milk room, with a tiled floor and marble tables, upon which stands, in porcelain pans, the rich milk for royal use. Here it is that the fair Princess of Wales, *a la Marie Antoinette*, comes with noble lords and ladies to make butter in a silver churn, and afterward to spread it on water slices of bread, and have it with her tea in the tiny room adjoining, to which no one is admitted but the Princess's most intimate friends.

## NOTES FROM FOREIGN EXCHANGES.

QUITE a vigorous discussion has been going on recently in the columns of some of our English contemporaries between two sets of correspondents. One party maintains that a game-keeper has a right to shoot or otherwise destroy any dog found trespassing on his master's property, while the other denounces this view of the case, not even admitting that a dog can be shot while following game.

There have been a number of decisions, bearing on this subject in the English courts, which appear to amount to this: that a dog may be shot if it is in the act of pursuing and "If the game could not otherwise be saved from destruction."

A Norwich (England) firm have recently invented a new kennel, with yard, which will be a very great convenience to dog owners. The house can be made of any size and can be provided with a separate yard for each compartment. It is made of wood with a corrugated iron roof supplied with gutters and leader. The yards are six feet square, the railings iron and fitted with a gate and padlock and with reversible troughs. The invention is certainly a great improvement on anything now in use.

In the sheep-dog trials held at Ulverston, October 1st, there were thirty-nine entries of dogs and bitches. The money prizes offered amounted to £71, besides three cups valued at 5 guineas each, presented by the Duke of Devonshire, the president of the Northwestern Counties Sheep-dog Trials Association, for 1890.

Bright, the first prize dog in the Local Stakes, on his first trial failed to pen his sheep in 11 minutes, but on a second lot penned in 7½ minutes.

Fau, the first prize bitch, had a bad lot, but penned in eight minutes.

In the All-aged Stakes Rob, first prize, worked wonderfully well and penned in 94 minutes.

Bess, first prize bitch, penned by careful work in eight minutes.

In the Puppy Stakes Mr. J. Wood's dog Bright took first, and Guilty, who had taken second in the Local Stakes, took first prize for bitches, penning in 5½ minutes. The work displayed by all the dogs entered was excellent.

The celebrated greyhound bitch Bit of Fun, owned by Mr. The Sharpless, of Forest Bank, Crawshaw, Booth, England, died October 1st. She was the winner of over ninety prizes.

Among the victims of the recent dreadful colliery explosion at Seaham, England, was a collier, named Ramsey, whose remains were so disfigured that at first another body was taken for his. A Newfoundland dog belonging to Ramsey's father, when the first corpse was taken to the house of the deceased, appeared to be greatly enraged and barked almost continuously, when, however, the mistake had been discovered and when Ramsey's body was brought to the house it ran to the collar with every manifestation of pleasure, and could scarcely be induced to leave it while it remained in the house.

FIRST FOX OF THE SEASON—*Cazenovia, N. Y., Oct. 25.*—Dr. E. C. Bass's party were out to-day for the first time and killed a fox. W. D. Smith was the fortunate one. We refrain from saying how many times this same party were out last season without shooting a fox, or telling how many times they got one with a spade. HAMMERLESS.

—The idea of having field trials in a locality where there were no birds, as was the case with the late Nebraska trials, "is a thing that no fellow can understand."

members of the Watervliet Rifle Association. Prize, a challenge gold badge. The score stood :

SYRACUSE, N. Y. Oct. 20.—The fall meeting of the Sixth Division Rifle Association opened to-day on the range at East Syracuse. There were present a numerous gathering of militiamen and rifle shots from Central New York, representing several organizations of the National Guard. The weather was not so favorable for good marksmanship as it might have been, but despite the bitter coldness of the air and the prevalence of a strong breeze, some excellent shooting was done. The programme of matches and the results were as follows :

Subscription Match—Open to all comers; 200 yards; any rifle:

Jones.....	4 4 4 5 4 5—32	Auer.....	4 5 2 4 4 5—27
Blackely.....	4 4 4 5 5 4—31	Mantel.....	3 4 4 2 4 3—25
Altman.....	4 4 4 5 5 3—29	Smith.....	3 4 4 4 4 3—25
Paliss.....	5 5 4 4 5 3—29	CAYBRO.....	2 5 4 4 4 3—25
Wingard.....	4 4 4 4 4 4—28	Burdick.....	4 2 3 4 3 4—24
Altner.....	3 4 5 3 5 1—25		

Sixth Division N. G. Match—Open to teams of twelve from each regiment, battalion or separate company of infantry in Sixth Division. Remington rifle, State model. First prize—To the regiment, battalion or company, whose team make the highest aggregate score, a Trophy, value \$100 :

FOURTY-EIGHTH REGIMENT, OF OSWEGO.

Col. Houghton.....	3 4 4 5—22	3 5 5 5—22	44

On the second day of the meeting the long-range match only remained for contest.

SCHUETZEN NOTES—Hoboken, Oct. 21.—At the annual meeting of the Hoboken Schuetzen Corps, held at their headquarters, 66 Adam street, the majority of the members were present to hear the annual reports of the secretaries and treasurer, which were read, and showed that the corps is in a prosperous condition. The result of the election for the coming year was as follows : Wm. Brehmanner, Captain; H. Tiedrich, Cor. Secretary; J. Widmann, Fin. Secretary; G. Neilsen, Treasurer; O. Keller, Trustee; F. Kuhn, First Lieutenant; M. Stappenbeck, Second Lieutenant; A. Schlens, First Shooting Master; H. v. der Leith, Second Shooting Master. A motion to procure new uniform (instead of the green blouse) was adopted. Preparations for a ball, to be held in February, 1891, was left to a committee.

STOCKTON RIFLE RANGE—Camden, N. J.—The Directors of the Stockton Rifle Range, of Camden, N. J., announce the matches for November, and say :

"This being the last programme of the season, the officers and directors of the Stockton Rifle Range Association take this opportunity to return thanks to their numerous patrons for the liberal encouragement given them, and to inform them that the additions and improvements necessary to make Stockton what its advantages of location and facilities of access entitle us to expect it to become—the most popular range in the country—will be completed before next spring, and the season of 1891 will open with a new range of 1,000 yards in addition to those now in use, and it is earnestly hoped that our friends will continue to give it their support, and that those who have availed themselves of the recreation offered by the noble pastime of rifle-practice will continue to patronize the range that has in such a short time become their favorite resort."

The programme includes the following :

November 1—Sharpe's Match for Military Rifles, Second Series.—This match will open Monday morning at ten o'clock, and remain open until 20 scores have been made, when the rifle will be awarded to the competitor making the highest score of the 20. Immediately thereafter another competition will be opened and a rifle awarded to the highest score of the 20 made, and so continued until the 15 competitions of this series is completed. Competitors can thereby shoot between ten and four o'clock on any day in the month except Sundays. Open to all comers; 200 yards; ten rounds; Sharpe's military rifle, without cleaning. Competitors having won a rifle in the first series of Sharpe's matches, with a score of over 40, will be handicapped two points in these competitions.

The Association has provided a Running Deer target, which will be run as a bullseye target on Tuesdays, Thursdays and Saturdays. Deer to be run by signal from the firing point only; any rifle, including repeaters; as many shots as practicable may be fired during each run. Tickets entitling the competitor to one run will be sold at ten cents each. A fine of ten cents will be imposed for not firing; for firing while the deer is out of bounds, or for hitting the haunch. Firing is only allowed while the deer is crossing a space 90 feet long in the centre of the run, which requires about five seconds.

November 13—Champion Marksman's Badge of 1890.—Open to all members of the Second Brigade, National Guards of New Jersey, 200 and 500 yards; five rounds at each, with the military rifle in use by the State. This badge will be awarded to the competitor who, at the close of the season, shall have won it the greatest number of times. In case of a tie, the highest aggregate score of all the competitions participated in up to that time to decide.

November 20—Hunter's Match, for Rapidity and Accuracy at the Running Deer Target.—Open to all comers; 100 yards; any rifle (including repeaters), no wind gauge to be used, but sights to be over the centre of the barrel; six runs, as many shots as practicable to be fired during each run and while the deer is within bounds.

November 25—Thanksgiving Day—Turkey Rifle Match.—100 yards; Position, off-hand; Weapon, any rifle under the rules; turkeys to be placed so that the head only will be exposed—to be killed outright before being awarded as a prize; entrance fee, 25 cents, and ten cents per shot; number of shots unlimited.

Same Day—Glass Ball Subscription Match.—Weapon, any rifle not over .22 calibre; ten shots; entrance fee, 50 cents; re-entries permitted, but only the highest score to count.

BERKELEY, Cal., Sept. 25.—The rifle teams of the Oakland Light Cavalry and of the University met to-day on the University's shooting range. The University team was victorious by four points. 200 yards. Score as follows :

	University Team.		Light Cavalry Team.
Col. Edwards.....	4 4 4 4 4 4—40	M. L. Bromley.....	4 3 3 4 4 3—34

Matlin.....	4 2 3 4 4 4—37	Gilmore.....	4 4 4 4 4 4—36

The Cavalry used carbines and the University the short cased rifle.

## Yachting and Canoeing.

### THIS YEAR'S RECORD.

THE season now closing has been in many respects the most successful in the history of American yachting. If devoid of sensational features, such as "grand events," "great festivities" and similar ostentatious display, it has seen a more rapid growth of "true yachting" than any of its predecessors. There has been quite as much racing done and fully double the amount of cruising. A gradual change in the sentiment of those who seek their sport on the deep has been working for some time and has cropped out in a more promising degree this season than ever before. We allude to the education of the yachting fraternity in seamen, the rapid substitution of sailing for the love of sailing in place of the mere owning of big yachts for the display of wealth or for the indulgence of social excesses. If the sensational writers of the day, who love to report in the huge headlines of a poster in answer to a craving for notoriety, have found but little food for their pens, those who wish to see the sport elevated in America to the same thorough sailor standard it has long occupied in England can congratulate themselves upon the rapid strides we are making in that direction.

The modifications now going on in tonnage, model and rig all point to the successful creation of a large body of intelligent graduates in the art of sailing, a body of men who will have knowledge and confidence enough to cut adrift from the leading-strings of professional smack men and their antiquated notions of what constitutes a yacht and to what a yachtsman should limit his aspirations in the way of cruising. In constant communication with a thousand correspondents scattered all over the country, no one is better able to feel the pulse of the public than ourselves, and that enables us to testify to the rapid development of sound and healthy ideas during the past season, all pointing to a desire for vessels of moderate tonnage, combining safety and cruising qualities of the first order. For this reason alone, if for no other, we deem the year now closing as one having added a greater store of wholesome experience in the sailor's art than any of its predecessors. We will publish our usual records for the year in an early day, and from them draw definite comparisons by figures, which will refute the efforts of some who dory the sport because they have been happily

spared the vulgar newspaper sensations of former years and who judge the entire community by the two or three races given by the long and metropolitan clubs. You need not fear any loss of the half dozen steam yacht hull swamping the sailing interests altogether, as supposed in some quarters. The additions made to the steam fleet are simply so many indications of the increasing wealth of the nation, and their construction always will go hand in hand with the spread of the sea. It is erroneous to assume that none but addle-pated individuals, with time hanging heavily upon their hands, can see any delight in cruising in steamers. There is quite as much skill, experience, watchfulness and vigilance in navigating under steam as from port to port in hand and eye, the spread of the sea. There is quite as much room for the acquisition of health and familiarity with all the ways of men and things afloat on the bridge of a fine steam yacht as there is in the cockpit of the clipper schooner. There is the same need for the most accurate and accurate navigation and the same need on one hand that there is in the science of modeling and sparring on the other. If aboard the steamer, you turn over all the cares and duties of her navigation and maintenance to a hired captain; so, too, may you have your professional man at the wheel of the sailing craft, and soothe your mind with cocktails and the late novels on the transoms of a vessel under sail. But if you are a man ambitious of acquiring equal rank in point of knowledge with your professionals—if you propose, in short, to be captain of your own craft, it is no great feat, if not greater, opportunity with your hand at the tiller than with your hand at the stop of a "back stay." The professional writers of the press who will bewail the taste for yachting under steam, because "they do not race," and their names and doings do not contribute enough for the knights of the pen to pad their columns or to swell the list of "back stay" writers, may as well never will drive out the sailing craft; she costs too much to build and she costs too much to run. Only a very small fraction of the fraternity can indulge in the thrilling sensation of driving along at a high rate of speed in command of a sea-going steamer, and even at will to "go ahead" and stop at "back stay." But not the growing steam fleet give any one the blues. The more the merrier. Encourage anything, everything from the dug-out up, that will take dyspeptic, bilious Young America away from the money-grubbing continent and give him a chance at the ozone laden breeze from the open sea, which is a superior tonic. The natural discover other spheres of usefulness and delight than the everlasting oar hoarding of gold. It is a great and good thing to make money, according to the modern code of ethics; but having made it, let us learn how to spend it rationally.

### STEAM CATAMARANS.

FOREST AND STREAM is a thoroughly practical journal. Practical because it combines the process of reasoning with an intimate knowledge of the mechanical operations and questions at issue. There is a large class laboring under the delusion that the less they read, the more they learn or know, and the more practical they are, the more they know. They refuse to accept any process of reason unless they are upon the same results while wielding their adze or heading a rivet. To this class belong the projectors of steam catamarans. Some time ago, when a deluded countryman was going to astonish the world with what he thought something new, we wrote as follows, Sept. 18, 1879 :

"The logic employed by the inventors is this : Sailing catamarans are known to be exceedingly fast, much more so than single hulled vessels, ergo, why not put steam into, or, we should perhaps say, into the venacious, and why not put steam into the venacious, because the sailing catamaran sails faster than anything else afloat, because the sailing catamaran sails faster than anything else afloat. Strange that this idea has not struck the world before, and that it was left to 'the theories' of a countryman to discover the possibilities hidden in the secrets of two hulls instead of one. That such experiments have been tried often enough, that many of them were known, even in the town referred to, to have ended in failure, were matters of minor consideration. The experiments, though good enough in their way, and undertaken by some of the ablest engineers of Europe, just lacked that little bit of extra genius which is depended upon to reverse the results of former years' favor of the two good citizens who have undertaken to startle the world afresh.

"It is a disagreeable task to disabuse these gentlemen of their fondest hopes, and in a few lines to show them where their logic is so weak that the enterprise will probably fall through at that spot; but we have received a number of inquiries from persons whose imaginations have been fired at the thought of this new discovery, in a steam catamaran, and we must not be led astray by designing schemers their attention is invited to the following :

Sailing catamarans are exceedingly fast under favorable conditions, because they combine the advantages of a sailing vessel, or sail carrying or driving power, with a minimum of resistance, owing to their very fine lines and small area of "wetted surface." That is the whole secret and nothing more. If we now turn to the application of the steam to such a double-hulled craft it is at once evident that the factor of momentum is increased in direct ratio to the resistance disappears, for we have to substitute steam engines for sail area; in other words, weight in place of stability. The excessive stability of the catamaran, which is one of her chief points as a vessel, together with the excessive weight, as soon as we apply steam. Further, with a given weight of engine and fuel, the catamaran can be obtained from the single hull than from the double, for the latter may be said to have four sides, against the former's two, to say nothing of the cross bracing and increased weight of a large deck area. The combined weight of the engine and fuel will be less in the boat of ordinary type than in the catamaran. Now, as in a new venture it is proposed—and much stress is laid upon this fact by the local viscerators—to have the ordinary hull split in two, the hulls being placed about fifteen feet apart and the boarded perpendicular sides being exactly parallel to each other. It follows that no finer lines will be obtained than in a single hull, for the outside lines of a single hull need not differ at all from those adopted, if all hulls are supposed to be brought together along midships. To run up a steam catamaran, which we believe is now well under way, has not a single point in her favor over the double-hulled steam yachts of the usual style of construction. There is not only nothing whatever upon which to base the extravagant claims to a speed of nearly thirty miles in this revamped experiment, but on the contrary, in every direction it is sure to be a disadvantage. The steamer. In the first place her "lines" are no finer, she has more wetted surface by nearly 50 per cent; third, both of the causes of resistance are still further augmented by her greater displacement; fourth, at the high speed intended the "feathering" of the middle wheels of small diameter will be sure to be a disadvantage, still another point of recommendation are decidedly objectionable, and a loss will result from "back pressure" as the buckets dip vertically in the water, something very well known to engineers, and the fact that the feathering wheels have not been generally adopted. Add to these drawbacks the disadvantage of action of the "race" from the midship wheels between the hulls tending possibly to produce a lower water level at than forward, and a hydrostatic "head" in consequence, and the determination to build a steam catamaran is a sure way to failure. It will be called the "Surprise," is one which will certainly be justified, but what a lot of money and time might not have been saved to the two enterprising persons had it ever occurred to them before commencing their steam catamaran to lay their vague plans and expectations before some one who has been successful in building the successful wielding of a broadsword! When steam catamarans can be built any faster than ordinary single-hulled vessels, the world will stand on its head, and that time has not yet come."

"Why the Commodore selected such a complicated and expensive engine as the Wells Balance is difficult to understand. When he could have had a simple and cheap engine, which he could have had not. As a single hull weighs less than two, and has less skin in it, it is quite certain that for the expenditure of power greater speed is to

WILLIAM H. THOMPSON, Sec'y, P. C.

HIGHLAND PARK, Ill., Oct. 6.—The third match of 96 arrows at 60 yards, between the Washburn Merry Bowmen and the Highland Park Archers, resulted in a victory for the latter club by 13-8, as seen by the following scores:

Highland Park Archers.	23-121	21-99	22-96	23-110	88-426
Dr. Weston.....	23-121	21-99	22-96	23-110	88-426
Mr. Swartwout.....	21-113	20-88	21-103	23-119	85-423
Mr. Taylor.....	23-121	21-99	22-96	23-110	88-426
Mr. Hammond.....	22-120	19-83	21-87	21-105	83-401
Mr. Hall.....	22-92	22-98	23-94	19-87	83-371

Washburn Merry Bowmen.

Will H. Thompson.....	23-131	23-121	24-122	23-149	93-533
Maurice Thompson.....	21-119	23-129	21-136	22-132	90-516
Mr. Roosevelt.....	23-121	23-121	23-121	23-121	92-584
Mr. McMechan.....	17-65	23-98	22-88	18-78	77-347
Mr. Klein.....	13-57	16-64	17-75	19-87	63-287
Mr. Hall.....	13-57	16-64	17-75	19-87	63-287

Highland Park Archers won two of the three matches, and the Washburn Merry Bowmen one, as follows:

Highland Park Archers won first match by.....	6-129
Washburn Merry Bowmen won second match by.....	9-119
Highland Park Archers won third match by.....	13-8

Oct. 19.—Below we give the scores of the second match, 96 arrows at 60 yards, between the Oakland Bow Club, of California, and the Highland Park Archers:

Highland Park Archers.	23-121	21-99	22-96	22-110	88-426
Dr. Weston.....	23-121	21-99	22-96	22-110	88-426
Mr. Swartwout.....	21-113	20-88	21-103	23-119	85-423
Mr. Hammond.....	22-120	19-83	21-87	21-105	83-401
Mr. Hall.....	22-92	22-98	23-94	19-87	83-371

Grand total, 839-1,621.

Oakland Bow Club.	22-113	21-102	20-87	23-115	84-436
F. C. Havens.....	22-113	21-102	20-87	23-115	84-436
Mr. Cook.....	19-89	20-85	21-89	19-89	79-345
A. W. Havens.....	14-50	16-50	15-50	16-50	62-200
Mr. Coffin.....	12-48	13-48	12-48	16-54	61-300

Grand total, 293-1,403.

Highland Park Archers won by 50-218.

HIGHLAND PARK, Ill., Oct. 21.—The gentlemen of the Highland Park Archers shot for the society's champion medal this afternoon. The winner, Mr. Taylor, commenced the use of the long bow only last July. The following scores gave Mr. Taylor 4½ points, Dr. Weston 2 and Mr. Swartwout 1½ points:

	80 yds.	60 yds.	Total.
H. S. Taylor.....	127-127	49-91	100-455
	131-127	52-114	
E. B. Weston.....	126-109	58-70	100-410
	134-136	52-114	
N. E. Swartwout.....	123-101	21-121	91-407
	123-101	21-101	
F. P. Hall.....	123-101	75-55	69-259
	118-56	11-47	

PROSPECT PARK, Brooklyn, Oct. 13.—Match between ladies and gentlemen of the Brooklyn Archery Club and the Toxophilite of Newark, N. J. Columbia and American round:

Ladies' Columbia Round.	50 yds.	40 yds.	30 yds.	H. S.
Mrs. A. H. Gibbs.....	17-47	21-103	23-123	61-273
Mrs. Palmer.....	15-59	21-111	24-125	59-275
Miss Schuller.....	13-51	17-51	20-84	50-186

Major Constable.....	15-53	22-105	22-93	60-251
Mr. Peddingham.....	19-78	21-103	22-106	62-387
Total.....	71-295	97-449	101-508	269-1,252

Grand totals: Ladies, 124-540; gentlemen, 269-1,252—393-1,792.

SARATOGA SPRINGS, N. Y., Oct. 24.—The following match at the York Round was shot Oct. 19, between Will H. Thompson, of Crawfordville, Ind., and Frank H. Walworth, of Saratoga Springs, N. Y. Mr. Walworth being allowed to add to his score the excess of his 80-yard score over his 100-yard score. Mr. Thompson's score at 100 yards surpasses any we have seen made by any other archer in the country:

	100 yds.	80 yds.	60 yds.	Total.
Will H. Thompson .....	46-220	36-444	23-109	105-47
Frank H. Walworth.....	26-03	36-102	20-80	82-34
Add excess at 80 yds.....				6

Mr. Thompson won by 69 points.

—For close confinement, sedentary habits and brain and nervous, trust in Hop Bitters.

WILLIAMSBURG ATHLETIC CLUB.—The annual fall games were contested Saturday, Oct. 23. The weather was rather unpropitious, it being bleak and very windy, which interfered with fast times that otherwise would, no doubt, have been made, as the track was in fine condition, owing to the efforts of Mr. McDasters, the club trainer.

In the 100-yard run H. M. Johnson, of the Lafayette A. C., was the winner in 10½ sec. from 4 yards; A. C. Cooper, N. Y. A. C., second, from 5 yards.

The 220-yard run was won by Walter A. Smith, W. A. C., in 24½ sec. from 17 yards; L. H. Wales second.

The 220-yard hurdle race was won by H. M. Stone, Pastime A. C., in 29½ sec.; J. B. Hanna, S. A. C., second.

W. H. Parry, W. A. C., won the one-mile walk in 7 min. 18½ sec.; G. H. Hanon, American A. C., second.

The 600-yard run was won by G. J. Bradish in 1 min. 18½ sec.; C. A. White, S. L. A. C., second.

The most exciting event was the 1,000-yard run, special handicap. L. E. Meyers, M. A. C., scratch, was the winner by about two inches from J. Saunders, W. A. C., 50 yards handicap. Meyers was not up to his usual form, and had a struggle to win.

The final tug of war was won by the Union A. C., from the Orion R. & A. C. by 3 inches.

HARVARD vs. COLUMBIA.—The return of this inter-collegiate match was played at Hoboken, on Oct. 18, and resulted in the New Yorkers' defeat by one innings and twenty-seven runs.

## Answers to Correspondents.

NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

A. H., Painesville, Ohio.—The armory is at New Haven, but manufacture has been suspended. Will resume at an early date, and due notice will be given in our advertising columns.

D. P. S., Glen's Falls.—Your dog has a bad attack of mange. Avoid giving any meat, and feed upon cooling diet. The disease is contagious, and you should at once quarantine him. Give him, twice a day, five drops of Fowler's solution of arsenic in his food. Keep his kennel clean, and change his bedding constantly. Once a week give an aperient of Epsom salts, and a teaspoonful of sulphur and magnesia in food three times a week. Rub the parts afflicted twice a day with Glover's mange cure, and write results.

J. W. E., Pottstown, Pa.—Your dog is troubled with constipation. Feed boiled liver, twice a week or oftener. Give plenty of exercise, and at regular times. Costiveness is frequently the result of inflammation of the bowels or liver. In addition to usual food, give boiled green vegetables. If the trouble has become chronic, give a pill of rhubarb and ipecacuanha—five grains or more of the former, with a half grain of the latter—at the time of feeding every day.

MASSACHUSETTS—Worcester, Oct. 23.—This week there has been somewhat of a let-up in sporting news in this vicinity. The local sportsmen have many of them had the pleasure of taking Mr. T. C. Banks, Business Manager of the FOREST AND STREAM, by the hand and renewing old acquaintance. During the week there have been two trials of skill in this vicinity. One of the local clubs had what they called "President's Day." Mr. C. B. Holden broke 88 out of 40 balls; Mr. George McLeer, 47 out of 50; A. L. Gilman, 44 in 40; and M. D. Gilman, 28 in 40.

H. A. M., Hammond, N. Y.—I. My Gordon setter has a very small white stripe on her breast, and for that reason she is said to be of impure breed. 2. Does it necessarily follow that if a so-called Gordon setter has any white in its coat, it is of impure blood? Ans. 1. "Stonehenge" says: "It is admitted that the original Gordons were often black, tan and white; but as in all our shows the classes are limited to black-tan, the long arguments which have been adduced on that score are now obsolete. A little white on the chest and a white toe or two are not objected to, but a decided frill is considered by most judges to be a blemish." 2. Certainly not.

D. T. L., Yonkers.—My dog has been lame in one foreleg for some time, and now for a week past has been afflicted in the same way in all of his legs. When I take hold of his limbs to work the joints, he howls and whines piteously. Ans. Your dog has the rheumatism. Keep him warm and dry. Feed on plain food. Rub the parts afflicted with a good stimulating liniment, such as is used for horses. Administer internally bi-carbonate of soda (baking soda) dissolved in a little water, three times a day. As you neglect to state breed, age or size of dog, we are unable to state exact quantity, but to a fifty-pound dog about one-half teaspoonful is the thing. You can gauge dose accordingly.

—One of the firm of John H. Pray, Sons & Co., wholesale and retail carpet dealers, Boston, Mass., is, or claims to be, a sportsman, and he will at all times take great pleasure in doing a favor for a fellow sportsman in want of any kind or grade of carpeting, rugs, etc., etc. Correspond with the house, or call and see him, and see if he means what he says.—*Advs.*

Many replies have been unavoidably crowded out, and have been sent by letter.

—For sinking spells, fits, dizziness, palpitation and low spirits, rely on Hop Bitters.

## PUBLISHER'S DEPARTMENT.

THE PLEASURES OF HOPE.—When the body is bowed down with pain in essence longing for relief brings hope. This may brighten the suffering, but it does not cure. At such a time as this, how welcome is such a friend as Warner's Safe Kidney and Liver Cure, bringing home health and happiness and the joys of a renewed life.—*Advs.*

—See kennel advertisement of H. B. Vondersmith.

—Mange-line cures, or no pay. Trial box mailed for stamp Hepworth, Druggist, 296 Madison street, Brooklyn.

—The Holabird Shooting and Fishing Signs. Uphregrave & McLellan, sole manufacturers, Valparaiso, Ind. Send for circular.

—Oh, why will you let that invalid friend suffer that Hop Bitters will so certainly cure.

NEW YORK PRESS CLUB.—The regular fall meeting of the New York Press Club will take place on Monday, November 15, that date being the eighty-third anniversary of Mr. Thurlow Weed's birthday.

## THE FOX GUN!

Special Announcement.

THE MANUFACTURERS OF THE "FOX" GUN, FEELING THAT DEALERS, as a general thing, have not done justice to the merits of this WONDERFUL GUN, are determined to have them placed before sportsmen more generally, that their great merits may become better known and appreciated. It is needless to speak of THE ELEGANT WORKMANSHIP and WONDERFUL SHOOTING POWERS of these guns. It is a fact well established that they are UNSURPASSED BY ANY IN THE WORLD.

We propose for a limited period to offer a line of these guns at the following EXTREMELY LOW PRICES, after which the original prices will be restored, our object being to introduce the guns into sections of the country where dealers have failed to present them; in the firm belief that where they become known they will be the established favorite, and we shall reap the benefit in future of this great sacrifice.

Such Inducements Have Never Before Been Offered.

Sportsmen wishing to purchase one of these beautiful guns must respond at once, as the number offered at these prices is limited.

## GUNPOWDER.

## DUPONT'S

Rifle, Sporting and Blasting Powder.

The most Popular Powder in Use. DUPONT'S GUNPOWDER MILLS, established in 1807, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN. Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING. Nos. 1 (coarse) to 5 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

DUPONT'S EAGLE RIFLE. A quick, strong, and clean Powder, of very fine grain, for Pistol Shooting.

DUPONT'S RIFLE FG, "SEA SHOOTING." FFG and FFGG. The FG for Long Range Rifle Shooting, the FFG and FFGG for general use, burning strong and moist.

Sporting, Mining, Shipping and Blasting Powders.

Of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the United States. Represented by:

F. L. KNEELAND, 70 Wall Street, N. Y. N. B.—Use none but DUPONT'S FG or FFG Powder for Long Range Shooting.

## The Hazard Powder Co.,

MANUFACTURERS OF

## GUNPOWDER.

Hazard's "Electric Powder." Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting." Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting." Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 lb. kegs. Burns slowly and clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle." FFGG FFG, and "Sea Shooting." FG in kegs of 25, 12, and 6 lbs. and cans of 5 lbs. FFGG is also packed in 1 and 1 lb. canisters. Burns strong and moist. The FFGG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

88 WALL STREET, NEW YORK.

#### THE WICKERSHEIMER PRESERVING FLUID.

A FEW weeks ago, in an answer to a correspondent, we referred to the "Wickersheimer process," and it has brought us a flood of letters which we have delayed answering until we could get the formula for its preparation and so not only give our readers valuable information concerning the preparation of fish and other animals for natural history purposes, but also how to make the fluid to do with. We first became acquainted with this method at the International Fishery Exhibition in Berlin this last summer, where in the display of Prof. Jean Wickersheimer, Conservator of the University of Berlin, we saw many animals lying on the tables, without even a glass over them, which were said to have been kept for three years. Among these were serpents of fifteen to twenty feet in length; birds, fishes, seals and crustaceans. Skeletons also were shown which were kept together by the natural ligaments and were perfectly flexible, among them a snake and a crane—perfectly charming specimens—bearing even the rude handling of the ordinary exhibition visitor and exhibiting every motion which the animals were capable of in life. Vegetable tissues were also preserved, and great sea weeds hung around looking as if newly gathered.

We naturally wanted to see how the fluid was used, and by invitation of Prof. Wickersheimer we saw some fishes injected. A fountain syringe was used, made of a tin can holding a quart, which hung on a nail about six feet high; a rubber pipe led from this, in the end of which was an injecting needle about four inches long. Laying a fish upon its back the Professor inserted the needle in its breast until it reached the heart, and let the fluid run until all the veins were filled. "But," said we, "how are you certain that it exactly strikes the heart?" "If it does not, then the fish will puff up about the gills and you try it again," answered the operator; "but if it is all right, then in a few minutes you will notice the pectoral fins begin to expand and stand out. If the fish is fresh the dorsal and other fins will also expand." The fish operated upon would weigh about six pounds, and as soon as the fins were expanded he threw it into a tub of the liquid, where it was allowed to remain for two or three days and was then ready to be placed on exhibition. The Professor explained that in the case of those large serpents, seals, etc., he injected them in all the large arteries which were accessible, as well as in the heart; but that for crabs, lobsters, spiders, starfishes and such small deer it was only necessary to keep them immersed for a few days. Collectors of insects will readily appreciate a method which leaves the legs flexible and not liable to break.

The colors in the serpents were well preserved. The fish faded somewhat, and their eyes sank as much as fish in market do when kept too long; but they were well preserved, and fish are the worst things which the taxidermist has to deal with, while the collector is agast at the bills for jars and alcohol. After we left Berlin the newspapers chronicled the fact that Professor Wickersheimer embalmed a boy and exhibited the body in the open air for several months, during which time it "looked like a sleeping child, preserving its softness and life-like appearance," while we saw the lungs of a turtle in a jar which could be inflated by a pipe through the cork to several times their size. At this time we knew that the Prussian Government had bought the formula, but did not know that it had been published by the Department of Instruction in the *Staatsanzeiger*, the official organ of the Department. Learning this we sent for a copy, and now take pleasure in laying before our readers the following translation:

#### FORMULA OF THE WICKERSHEIMER FLUID.

"In 3,000 grammes of boiling water dissolve alum, 100 grammes; common salt, 25 do.; saltpetre, 13 do.; potash, 60 do.; arsenious acid, 10 do. After cooling and filtering the above solution add to every ten litres of it four litres of glycerine and one litre of methyl alcohol."

The directions given in the paper alluded to are as follows: "The mode of application varies with the nature of the bodies requiring to be preserved. Anatomical preparations, entire bodies, etc., which are to be preserved dry, are laid in the fluid from six to twelve days, according to their size, and are then taken out and dried in the open air. The ligaments and muscles will now remain flexible and soft, so that all natural movements can be executed. Hollow organs, lungs, intestines, etc., must be filled with the fluid and then laid in it;

afterward they are taken out and dried, if further being distended with air. Smaller animals, such as crabs, beetles, lizards, frogs, etc., are not to be dried, but put up in bottles of the fluid, if the natural colors are to be kept unchanged.

"If human or other large bodies are to be preserved for a longer period before they are used for scientific purposes it is sufficient to inject them with the fluid. Two litres, f. i., will suffice for a child of two years; about five litres are required for an adult. By this treatment the muscles will appear as if fresh, when sections are made, even after years. When thus injected if human bodies are preserved in the open air they will gradually lose their fresh appearance and the skin will become brown. This can be avoided if the fluid is rubbed into the skin and if the access of air is prevented as far as possible.

"This latter treatment is recommended for bodies which are to be exhibited or to be preserved for some time before burial, for the features will remain unchanged and there will be no smell.

"For real embalming a method combining injection and immersion is to be applied. The bodies after injection are wrapped in cloths which are saturated with the solution and are then kept in tight cases."

#### THE RHODE ISLAND FISH COMMISSION.

THE ninth annual report of the Rhode Island Fish Commission, made to the General Assembly at its January Session, is just at hand. The sea-fisheries of this State are of great importance, so far overtopping the fresh water interests that the Commissioners look more towards means of preserving the former than increasing the latter and call the attention of the law-makers to the fact that their law requiring all taking of fish by traps, weirs, and similar contrivances, to be suspended from Saturday morning at sunrise to the same hour on Monday, from May to August, is not enforced. The Commissioners have done all in their power to call public attention to the law by publishing it once a week in the principal newspapers and appointing deputies who shall have supervision of certain parts of the bay shores included in the act.

In order to render their report perfectly clear it is accompanied by a map showing the traps at Seconnet in the spring of 1879, and another exhibiting the heart-nets or pounds set in Narragansett Bay during the same summer, together with the depths of water in which they are placed. The law was found to be more generally observed after this, only one instance of its violation being reported. The difficulties of enforcing the law were very great, as during a run of scup (the "porgy" of New York), *Stenotomus argyrops*, the traps are overhauled every two hours, night and day, and when the weather is rough it is impossible to tell what is going on about a trap unless a boat is anchored beside it; and when no fish are running the fishermen are very law abiding, but frankly say that in the event of a run of fish on close days they would run the risk of prosecution. The Commissioners decline to argue the question as to the spring trapping interfering with the hook and line fishing in Narragansett Bay as after all that has been written on the subject they seem no nearer a solution of it than twenty years ago. "The argument," say they, "has been a bitter one, and neither side has been at all disposed to listen to reason. The trappers have fought a hard fight with a bold front, and have never failed to appear when called upon to assert their position, backing it up year after year with the same arguments by the same parties. One wiseacre asserts that the pollution of the water from the sewage of the City of Providence has ruined the bay fisheries; an opponent takes the floor and proves exactly the contrary. \*\*\* "A glance at the map shows that the traps are so set as to take the fish as they go out and not as they come in, and this year the most southern and eastward one at West Island took more than any other, showing that the fish so taken were bound still farther East. In proof of this, it is a fact that the trappers at Buzzard's Bay have found that their business has come to an end since trap fishing has become systematized and carried on so large a scale at Seconnet."

In referring to the old saying that the fishes of the sea can never be exhausted they very truly say that this maxim is applicable only to those species which remain at sea, while others which are obliged to seek the vicinity of the shore to

#### FOREST AND STREAM.

NEW YORK, THURSDAY, NOVEMBER 4, 1880.

\* \* \* The FOREST AND STREAM goes to press Wednesdays. Correspondents are requested to mail their communications so that they may reach us before that day.

A BROADENED FIELD.—Although the cricket department of the FOREST AND STREAM has from its inception been accorded a very substantial support by the devotees of that game, we are compelled, by reason of the other demands upon us, to discontinue the department. The space thereby gained will be devoted to our specialties—fishing, shooting and the kennel; and we shall give our undivided attention to these branches of American field sports. Our game columns each week are now filled with a rich abundance of matter, which indicates either that an unusually large host of sportsmen are in the field this fall, or, perhaps, that the FOREST AND STREAM has been more successful than ever before in eliciting from its hosts of friends their experience in the pursuit of game.

By narrowing our field we have broadened it, and we shall strive now to make the paper more than ever before a repository of all good things pertaining to the gun, rod and kennel.

OPENING OF THE QUAIL SEASON.—The season for quail in this State opened on Monday the 1st instant. This date is certainly none too late, and in the opinion of many sportsmen it is too early. We shot last week in Connecticut, and found that several of the birds moved were not yet full grown. We have sometimes seen in November little quail just hatched, but of course in such cases the nests had been broken up so that the second brood was exceptionally late.

We think the opinions of the oldest sportsmen, those who have the widest experience, would agree that the birds should never be shot before this time. The law in Pennsylvania is defective and so is that of Connecticut in permitting quail to be shot too early. Still it must be said that few men, we hope, trouble the half-grown birds. The sportsmen have too much self-respect to meddle with these broods, and as the marketmen will not buy the little things, the pothunters have no inducement to kill them.

spawn should have some mercy shown them, "or our children's children (if we are so fortunate as to have any) will have no fish." They treat the pound-net question very fairly, recognizing the fact that it has been a business pursued for twenty years or more, and its sudden stoppage would work injustice to those having their means invested in it, adding: "We are, all of us—legislators, commissioners, fishermen and arguers, *pro* and *con*.—unfortunately very ignorant of what goes on under water; it is an element that offers many difficulties to the student, and we must then submit to learn what we do of nature's work slowly if we would learn surely, and avoid jumping at conclusions," and Prof. Baird is quoted as holding the same views. A license of fifty dollars, or such sum as the Legislature deems fit, is proposed for all pound-nets or for each captain of a trapping gang who is to make return under oath to the commissioners as to the catch during the season, prices, etc., any evasion of which is to be punished by fine or imprisonment.

In their report on the inland fisheries they mention that black bass have multiplied throughout the State and are now comparatively abundant where they were unknown ten years ago. They speak favorably of the carp and request those having suitable waters to make application for them which will be considered when they receive the promised lot from the National carp ponds at Washington.

—We understand that Mr. J. W. Bouton, 706 Broadway, New York, is receiving subscriptions for the reprint of Dame Juliana Berner's "Treatyse of Fysshynge." The publisher's announcement tells us that the extreme rarity of this work and the great interest taken in it by connoisseurs has suggested a *fascimile* reprint for the use of those collectors and anglers who can never hope to possess the almost priceless original. The "Treatyse of Fysshynge," by Dame Juliana Berners, was first printed by Wynkyn de Worde in the second edition of the "Book of St. Alban's," in 1496. Some ten or more editions of the work are known to have been issued between the date of its first publication and the year 1600, showing the comparative popularity of the work in the early days of printing. All these possess more or less value from their varying features and degrees of rarity, and are eagerly sought after by collectors. The present *fascimile* is reproduced from a copy of the original edition in the British Museum, by means of photography, and consequently renders every peculiarity of the original in faithful detail; the rude illustrations which adorned the first edition of this "Ityll plaunff" are here given in all their quaint roughness. The work is printed on hand-made paper of the same texture and color as that on which the first edition appeared, and the binding is of contemporary pattern and material, so that the reader of to-day in handling this volume can realize the form and appearance of the original, which must have delighted the eyes of those who studied "treatyses pertheyngte to dyvers playsaunt matters belongynge vnto noblesse." The subscription price of the *fascimile* reprint will be \$5.

**THE PENNSYLVANIA FIELD TRIALS.**—In stormy weather the inaugural meeting of the Pennsylvania Field Trials Association began and in dismal weather it ended. Four days had been allotted for the running off of the stakes, but on account of the scarcity of birds, the change of location and the steady downpour of rain during most of the time, only seven heats in the first stakes—the All-aged—were run off, and all the prize money was pooled and divided.

The meeting, for an inaugural one, was well attended. Pittsburgh was largely represented, but we were surprised to see, in the list of forty-three entries, but one name from Philadelphia. It seems to us that these trials were run somewhat too early to give stay-at-home people an equal chance with men who may choose to send their dogs to the West for work at the opening of the season there. Would it not be better to have succeeding meetings fixed for a date at least a month after the opening of the season in Pennsylvania? In such a case dogs, whose owners for any reason cannot send them out of the State, would have an opportunity to have a fair amount of work on local birds given them before the trials are run.

A very full account of the meeting will be found in our kennel columns this week, where also all remarks on the events of the meeting appear.

**BATTERY SHOOTING.**—Duck and goose shooting from batteries and from bush houses, or blinds of any description, built away from the shore, should be everywhere forbidden. There is no method of shooting that has so great a tendency to drive fowl away from any locality as one which disturbs them on their feeding-grounds. No matter how much the birds are shot at on the open water or while flying across points they will still continue to frequent a locality where they are allowed to feed in peace. As soon, however, as gunners begin to disturb them while on their feeding-grounds the suspicions of the birds are aroused at once and they become very wild. They dare not alight with other ducks, for they have learned by sad experience what decoys are, and every bunch of birds on the water is shunned. Persecution of this kind cannot fail to result in driving the birds away to other grounds where they will be free from attacks of this kind.

Batteries and bush houses are nearly always placed on the feeding-grounds, and their use should therefore be forbidden. Sailing for ducks also tends to harass and drive away the

birds, and should nowhere be permitted. The law for Long Island on these points should be the same for all parts of the State.

**FISHWAYS AND FISH LAWS.**—The construction of fishways is an essential point in the protection and propagation of fish and with proper passes at Troy, Glen Falls and Cohoes there is no doubt but that the Hudson and its great tributary, the Mohawk, could be made salmon streams, while it is apparent to every thoughtful man that many trout streams have mill dams which have cut off the fish from their spawning beds. If it is necessary for the sake of the waterpower to dam a stream it should be made obligatory upon those who derive pecuniary benefit therefrom to erect a fishway in order that the rights of the people to an unobstructed passage of fish to and from their breeding grounds is not interfered with, and it needs not only the assistance of Fish Commissioners and the laws referred to, but every friend that can be interested, to fight for the enforcement of the fishway law which is now ignored by dam owners. The black bass spawn in June in many waters, and the close season prescribed by the New York law should be extended to at least July. Dyestuffs, sawdust and coal tar should be taken care of by those who handle or make them, and it is unjust to exempt any streams from the provisions of the law regulating the emptying of deleterious refuse in our streams. We hold that no individual or corporation should have the right to deprive the people living upon or near a stream of their right in the fish in it, which is older than any law authorizing the building of dams or the erection of mills.

**STRIPED BASS.**—This fish has been very scarce in the vicinity of New York throughout the season, and anglers have bewailed its supposed disappearance; but the past ten days the professional fishermen along the Massachusetts coast have been taking the large ones quite freely, and on Tuesday, the 26th inst., Mr. Blackford received the first lot of large fish, and his stand was piled with them. They were hung around, making a beautiful show. They ran from thirty to sixty pounds, averaging forty-five, and were selling at sixteen cents per pound, while the smaller ones, from two to ten pounds, brought twenty cents. As they have probably come to stay, there will be a great decline in these prices by the end of this week. Anglers may now look for good fishing in the East River and up Long Island Sound.

**THE SALMON MYTH.**—In all lands where the salmon is found there is a tradition on each river that in former times of plentiful fish a law was passed for that particular district forbidding employers to feed it to their apprentices more than twice a week, sometimes varying it to three times during that space. This legend obtains on the Connecticut, Housatonic, Penobscot and other American rivers. We have heard it in Germany on the Rhine, the Weser and the Oder, and in England it also exists. We have just come across it in an old volume of the London *Sporting Magazine* for 1833, vol. 33, in which a writer tells that "Perth servants were not obliged to eat salmon more than twice a week." The singular part of this legend is that it is always told to you as a rich joke, peculiar to that locality, and that the narrator firmly believes it.

**FLORIDA.**—We call the special attention of Florida tourists to the reliable information contributed in this issue by our well-known correspondent Al Fresco. Those who contemplate a trip down the southwestern coast should not fail to consult the map of that region which Al Fresco so courteously places at their service. We shall take great pleasure in forwarding the success of projected Florida cruises.

**PULMAN'S PALACE CAR CO.**—Col. D. N. Welch having, on account of continued ill health, tendered his resignation as General Superintendent of the Company, and the same having been accepted, to take effect on the 25th inst., Mr. George F. Brown, heretofore assistant to the General Superintendent, will, until further notice, perform the duties of that office under the title of Acting General Superintendent.

**A WORD TO OUR READERS.**—Every reader of the *FOREST AND STREAM* is requested to send us the names and addresses of such of his friends as are interested in field sports, but who are not among our subscribers. To all such we will send free specimen copies.

**BENCHED SHOT.**—Hanover County, Va.—I notice in the last number of *FOREST AND STREAM* a communication from one of your correspondents about shot bunching, which possessed a peculiar interest for me, as it showed me that my experience in this was not singular. In September I think it was, I took my breech-loader to try its range, closeness of shooting, etc., fired at the side of an unoccupied house eighty yards off. On examining the radius and penetration of the shot, I found to my surprise a freshly made hole of irregular shape, as if made by a tumbling rifle ball of .32 cal. A gleam as of lead caught my eye, and taking my knife I extracted fourteen shot from the hole. I used Tatham No. 8 chilled, out of a 12-bore Porter gun, which, I am assured, is a second quality Scotch gun. I understand that it is the habit of gunmakers to put some other than the firm name on those guns which on trial do not come up to their standard. This may bear out your view—that the defect is of the gun and not of the shot. In a future communication I may give your readers some account of partridge shooting in Virginia, such as we hereabout indulge in. Though an enthusiastic sportsman, I am hardly naturalist enough to say whether our partridge are really quail, but one thing I know—they will continue to be known as partridges in Virginia. J.

## The Sportsman Tourist.

### SOUTHWEST FLORIDA.

IN my issue of Oct. 7 I notice a communication entitled "A Florida Cruise." In the columns of the *FOREST AND STREAM* in years gone by, I directed the attention of sportsmen to the attractions of the southwest coast of Florida; as I am personally acquainted with it, and as I write an annual letter, I have something to say in 1890. Your correspondent asserts that "among the islands of Charlotte Harbor there is a species of panther called Mexican lion, and we are particularly anxious to obtain our these fellows." The words "thin out" imply that these animals are plentiful, but to "Al Fresco" and some of his sporting friends who have visited these islands, the statement of your correspondent is too "thin." If these animals ever existed on these islands it will require a forty horse-power telescope to find them in thinning out quantities in the year 1890.

Your correspondent states that "when they got away down they will quit their boat and take an ox-cart for the interior." When sportsmen get "away down" they will discover the fact that ox-carts are not obtainable. The most southern point where an ox-cart is obtainable is Fort Meyers, on the Colosabatchie River—but this is not "away down." The only vehicle used on the coast "away down" is a boat.

The writer refers to guides. My experience, and that of others, is that they are not always reliable. Last winter some of my friends chartered a sloop and engaged the services of the "best pilot on the coast," with the expectation to copy my map of the coast south of Charlotte Harbor. On one was shown the islands, passages, channels, entrances and streams emptying into Estero Bay. The pilot ridiculed the idea of using maps, and would not refer to them. My friends were desirous of ascending the Corkscrew River, and as the pilot refused to be guided by charts they failed to find this stream. Pilots are familiar with the coast north of Punta Passa, but south of this point, with the exception of Estero and Marco Passes, they know but little of the coast. I have compiled a map from actual surveys, on a scale of two inches to the mile, of the coast from Little Gasparilla Pass to Cape Romano, showing each island, pass, channel, lagoon, bay and stream, and if any gentleman calls at my residence in this city and presents a note or card from you, such person will be allowed the privilege of copying the maps.

Let me repeat what I have already stated in your columns that for shooting and fishing the southwest coast of Charlotte Harbor cannot be excelled by any portion of the United States. The winter is the dry season, and unless an exceptional season occurs, rain is seldom seen during the winter months in South Florida. The climate is all that can be desired, and its healthfulness is beyond a doubt. On the coast fish exist in great variety and in endless quantity. Northern tackle stores advertise "fishing outfits for Florida waters," and while the supply is adapted to the St. Johns River and lakes, it is unsuited, as a rule, to the southwest coast, unless the piscator confines himself to the capture of sheephead, black bass and sea trout. To capture cavalli, channel bass, tarpon and jewfish, superior hooks and strong lines are a necessity. A full line of tackle adapted to the capture of our large fish can be purchased in this city on as reasonable terms as in the North. In this connection I may remark that we require a spinner for Florida waters of sufficient strength to haul fish weighing from ten to fifty pounds. Spoon baits, as usually made, are too flimsy, and if a twenty or thirty pound bass is hooked and landed, the bait is bent, twisted and rendered useless. What is required for the southwest coast is a spoon or spinner, with a strong brass swivel, a stout snood, and one or two strong, reliable hooks. Three years since one manufacturer endeavored to supply the want. His spoons possessed strength, but they would not revolve, and in his fish were so small that the trout would take the spinner, and although a small one is required, it should be strong for a bass may be hooked running from twenty to thirty pounds. Cannot some manufacturer supply a much needed want—a spoon or spinner suited to the capture of cavalli and channel bass?

The southwest coast affords a fine field for the fly fisher. One of my friends captured eleven distinct species of fish in one season on one stream. Cheap, gay and large flies with the best tackle required. To the tourist of sport the southwest furnishes unrivaled sport; but to the expert, the noble tarpon offers an opening for fight and sport that cannot be equalled in any other portion of the world. For activity, light, speed and gymnastic performances the tarpon excels anything in the way of fish life; tarpon range from 50 to 150 pounds, and I would not recommend any rod fisherman to indulge in this kind of fishing unless he is provided with a reel which will stand the strain of a sudden pull. I have visited this (St. John's) in the summer months, and during the past season at least 50 were hooked near Mayport, but none landed. Last winter some of my friends hooked five within one hour at Gordon's Pass, but all escaped. The difficulty was in the short lines and the application of too much muscle on the part of the fishermen. In many of the inlets and streams of the southwest coast these fish exist in great quantities, and are worthy of the notice of Cuthbert's. When hooked they take a lightning run of 50 or 100 yards, followed by a series of leaps in the air of six or seven feet. If they fail to shake out or straighten the hook the performance is kept up.

At many of the inlets, at the young flood, the rod fisherman can stand on the shore and hook channel bass at almost every cast. On the Colosabatchie, above the islands, and at other points, large cavalli can be hooked almost as rapidly as the spinner can be thrown astern. In numerous localities the sheephead can capture his favorites almost as rapidly as he can bait and land them. If a change of sport is desired, at certain points jewfish, ranging from 150 to 300 pounds, can be captured. At some of the inlets, notably Marco, the lover of heavy weights can indulge in the capture of loggerhead turtles, from 200 to 600 pounds. If such sport is esteemed too tame for the ardent fisherman, he can amuse himself capturing sharks of almost any size desired.

At my friends "away down" the coast I was compelled to start from Cedar Keys or transport a boat to Key West and make that my point of departure. But recently a change has been effected in the way of transportation on the southwest coast. Through the enterprise of Miller and Henderson, of Tampa, a number of new, commodious and full powered steamers have been placed on the coast. A steamer leaves Cedar Keys for Manatee, Tampa and Punta Rassacum weekly; to Crystal River, Bayport and Glen Water Harbor weekly, and the Saguaro to the Suwannee as far as New Troy once each week. It is probable that a steamer will be put on the

route from Cedar Keys to the Waussa River and St. Mark's. The price of passage on the steamers is reasonable, and the cost of transporting boats from Cedar Keys to Punta Rassa or Key West would be from six to twelve dollars, according to size and weight. Major Galphen, the agent of the steamship line at Cedar Keys, is an ardent sportsman, and I will guarantee that he will extend the hand of fellowship to disciples of the rod and gun, and aid them in every way possible.

Dr. MacAvoy is conducting a large hotel at Cedar Keys, which will be finished about Dec. 1. The Doctor informed me that it would be supplied with new bedding and furniture, and managed by a Northern man who knows how to "run a hotel." Comfortable hotel accommodations have long been needed at the Keys, and we feel assured that "The Seaview" will merit and receive a full share of patronage.

Sloops of from four to six tons, capable of accommodating four persons, with captain, can be chartered for about \$100 per month. The charter party would have to supply necessary provisions. A party of say two could enjoy a pleasant cruise by transporting a boat of from sixteen to twenty feet in length by steamer from Cedar Keys to Punta Rassa or Key West. A supply of provisions could be stored at Punta Rassa until wanted. Between Punta Rassa and Cape Sable sportsmen could enjoy hunting, fishing and shooting to their entire satisfaction. In my last trip I transported a boat from Cedar Keys to Key West, and from the latter city worked my way northward to the former place. The boat was sixteen feet long and six feet beam. In it I found room for five persons, provisions, three five-gallon water kegs, bedding, gun, rifle, fishing-rods, tackle, charts, compass, stove, etc. At night I spread an awning over the boom, placed stove and water kegs on deck and secured comfortable sleeping accommodations for two. For a canoe trip the southwest coast is unequalled. The coast is shallow and harbors can be made every few miles. Unless the wind is blowing on shore the water is as calm as a mill pond. The wind is generally from the northwest to northeast during the winter, and rough water is seldom met with.

There are but two points along the coast where it is necessary to run outside—from Girdens Pass to Estero Inlet, a distance of eleven miles; and from Kettle Harbor to Casaps Pass, a distance of fourteen miles. In my last trip, in a sixteen foot boat, I made most of the run outside. As I have enjoyed so many pleasant hours on the Southwest coast I wish others to follow in my tracks. Persons can ship boats from New York by schooner to Jacksonville for a trifle; and if consigned to Peter Jones he will take charge of them until called for, and will charge a moderate fee. Parties can purchase boats in this city on favorable terms. The freight on boats from this city to Cedar Keys is \$1 per hundred weight.

Col. Allen has placed a steamer on the Kissimmee River, and will make semi-monthly trips from Lake Tohopekalga to the lower end of Lake Okechobee. He has had suitable boats constructed for sportsmen. By leaving the steamer at Isopoga Creek, where it enters Kissimmee River, and by ascending the former stream to Lake Kissimmee, sportsmen can ascend almost to the very head of the river north of Lake Okechobee—a region where game has not been disturbed since the last Indian war. Deer, bears, panthers, turkeys and ducks exist in plenty, and have not been disturbed. The fishing is said to be superb. A friend in whom I can place dependence visited Isopoga, and from his statements the neighborhood of this lake must be a sportsman's paradise. To reach this point the sportsman must take steamer from Jacksonville to Sandford, railroad from Sandford to Orlando, from Orlando a hack line 18 miles to Lake Tohopekalga. The steamer leaves the City of Orlando on the 1st and 15th of each month. W. H. Bliss, 31 East Bay street, Jacksonville, is the agent of the boat, from whom information can be obtained. Adventurous sportsmen can transport a boat from Sandford to Tohopekalga, descend the Kissimmee River to Lake Okechobee, cross the lake and ascend Fish Eating Creek to New Fort Centre. One of the party could follow the old Military road to Charleston's, distant 10 miles, and at that point secure a bullock team and wagon to transport a boat to Fort Thompson, distant twelve miles from Fort Centre. The Calloosahatchee can be descended to Fort Myers, where a supply of provisions could be obtained, and from that point the southwest coast could be worked to Cedar Keys or boat and outfit sold, and steamer taken at Punta Rassa for the return trip. From Lake Tohopekalga the entire route to Fort Myers is through an almost unsettled country stocked with game of all kinds.

Another pleasant boat trip is up the St. John's to Salt Lake. Railroad to Titusville, and boat to Lower Indian River and Lake Wales. At the lower end of the river and the lake of the lake most excellent fishing can be secured. The tourists are adventurous and desire an extended trip they could assume themselves at Lake Worth until a westerly or northwesterly wind set in, and with a fair wind and a smooth sea they could make the run to Bay Biscayne, a distance of about 70 miles. Easterly or northeasterly winds make an unpleasant sea on the Atlantic coast. But during the winter months cold snaps are accompanied by westerly northwest winds which blow for two or three days, and a run like that referred to can be successfully and pleasantly made. From Biscayne Bay no difficulty from rough water would be encountered in making a trip to Key West, Punta Rassa or Cedar Keys. The navigation among the Keys is somewhat difficult as a consequence of shoal water, and parties attempting it should secure the services of a pilot or purchase in the North a series of fire charts of the Florida Reefs published by the government—cost of the series \$7. There is a channel inside the reef, and to the east of the reef and channels between the keys, but without a pilot even the sportsman would discover that about blasting sand banks under the navigation is somewhat difficult. In conclusion I will remark that if any of your subscribers will visit me and present a note from you I will render them any needed assistance, or furnish them with any information in my possession.

Jacksonville, Oct. 1880.

AL. FISKE.

—Most of the game served on a Paris table comes from abroad. Thus, England and Bohemia send the pheasant; Scotland, Spain and Algeria, the red or Gurnsey partridge; Egypt, and especially Italy, the quail; Russia sends the heathcock, the hazel hen, the lapocpe, and the bustard, a rare bird in the French capital; Corsica, the edible ousel, and Italy, the titlark and the white tail. Snipe, water-rail, teal, wild duck, and wild swan come from Holland and Italy. Four or five birds are on an average sent up to Paris every year from the Pyrenees and the mountains of France. Deer usually come from England and Germany. Hares of a superior quality are furnished by Austria, while Sweden and Russia send white hares and even reindeer.

## Natural History.

RAIN ISLAND.—A correspondent writes us from Cortesville, Pa., saying that he killed a sora rail there on Saturday, October 23, and asking if it is not a stranger so far inland. These birds are by no means uncommon in the Chester Valley, and we have killed them there. It is a mistake to imagine that they are only found on the sea-board. They are very abundant almost everywhere if there is good ground for them. In Illinois, Michigan and Wisconsin they are killed in great numbers, and we have found them in the reeds about alkaline lakes in the very heart of the Rocky Mountains.

### THE FLIGHT OF BIRDS.

FEW problems have caused more thought to zoologists than that which concerns the migration of birds. The many observations that have been made by ornithologists in many countries, though they have served to throw some light on the subject leave it still obscure, though we may hope that the day is not distant when we shall know more about these matters. The London Standard recently printed some interesting facts with regard to the flight of birds, which we give below. It says:

We know that most migrants fly after sundown, though many of them select a moonlight night to cross the Mediterranean. But that their meteorological instinct is not unerring is proved by the fact that thousands are every year drowned in their flights over the Atlantic and other oceans. Northern African and Western Asia are selected as winter quarters by most of them, and they may be often noticed on their way thither to hang over towns at night, puzzled, in spite of their experience, by the shifting lights of the streets and houses. The swallow or the nightingale may sometimes be delayed by unexpected circumstances. Yet it is rarely that they arrive or depart many days sooner or later, one year with another.

Prof. Newton considered that were sea-fowl satellites revolving round the earth their arrival could hardly be more surely calculated by an astronomer. Foul weather or fair, heat or cold, the pullins repair to some of their stations punctually on a given day, as if their movements were regulated by clockwork. The swiftness of flight which characterizes most birds enables them to cover a vast space in a brief time. The common black swiftness can fly 376 miles an hour, a speed which, if it could be maintained for less than half a day, would carry the bird from its winter to its summer quarters. The large purple swiftness of America is capable of even greater feats on the wing. The chimney-swallow is slower—30 miles per hour being about the limits of its powers; but the passenger-pigeon of the United States can accomplish a journey of 1,000 miles between sunrise and sunset.

It is also true, as the ingenious Herr Palmen has attempted to show, that migrants during their long flights may be directed by an experience partly inherited and partly acquired by the individual bird. They often follow the coast lines of continents, and invariably take, on their passage over the Mediterranean, one of three routes. But this theory will not explain how they pilot themselves across broad oceans, and is invalidated by the fact, familiar to every ornithologist, that the old and young birds do not journey in company. Invariably the young broods travel together; then come, after an interval, the parents; and, finally, the rear is brought up by the weakly, infirm, molting and broken-winged. This is the rule in autumn. The return journey is accomplished in the reverse order. The distance traveled, seems, moreover, to have no relation to the size of the traveler.

The Swedish blue-throated performs its maternal functions among the Laps, and enjoys its winter holiday among the negroes of the Soudan, while the tiny ruby-throated humming bird proceeds annually from Mexico to New Foundland and back again, though one would imagine that so delicate a little fairy would be more at home among the casti and leaves of the Tierra Caliente than among the firs and fogs of the North.

DOES THE FLYING FISH FLY?—This question having been raised by those who do not consider that the motion made by the flying fish is such as to be properly called flying, Prof. Jordan in a recent letter to the *American Naturalist* gives the following extract from his field notes containing his observations on the Western species known as *Euxostichus californicus*, Cooper:

It flies for a distance sometimes of nearly a quarter of a mile, usually not rising more than three or four feet. Its motions in the water are extremely rapid, and its motive power is certainly the movement of its powerful tail in the water. On rising from the water the movements of the tail are continued for some seconds until the whole body is out of the water. While the tail is in motion the pectorals are in a state of very rapid vibration, and the ventrals are folded. When the action of the tail ceases, the pectorals and ventrals are spread, and as far as we can see, held at rest. When the fish begins to fall, the tail touches the water and the motion of the pectorals recommences, and it is enabled to resume its flight, which is finally finished by falling in the water with a splash. When on the wing it resembles a large dragonfly. The motion is very swift; at first it is in a straight line, but this becomes deflected to a curve, the pectoral on the inner side of the arc being bent downward. It is able to some extent to turn its course to slay off from a vessel. The motion seems to have no reference to the direction of the wind, and we observed it best from the bow of a steamer off Santa Catalina Island, in early morning, when both air and water were free from motion.

HABITS OF THE BEAVER.—*Wellborn*, Oct. 23.—My attention has just been called to an article in *FOREST AND STREAM*, criticising my remarks as to the beaver being first of the more important animals to vanish before the white hunters and trappers. If "E. B. B." will "take his eye and throw it along" the route from Eastern Maine to Western Oregon, and then repeat from northern Minnesota to the seashore, he might take in a half a million—more or less—of so-called beaver dams. These localities where these exist, old people may be found who at one time hunted deer, bear, wolves and panthers. Such is the case here in northern Pennsylvania. It is the same in northern New York. So of all, or nearly all

the middle or western States. Now, how many of the oldest hunters ever saw a beaver colony in active operation, or even a beaver in his native wilds? I confess I never did, and I have hunted, fished and trapped for the last forty years in all the different States, in all of which, save one, deer and bear were yet extant, but not one tail of a beaver. I concede the semi-domesticated family of beaver in Iowa. More. If "E. B. B." will go to Jasper County, Miss., he may find several beaver towns in working and active condition. At least such was the case eight years ago. They existed through sufferance and because no one thought of hunting or trapping them. They became a nuisance and an eyesore to the planters by "backing the water" with branches, and flowing arable land. They were driven away by abundant water from the upper portions of their dams at intervals of a few days. At first they worked water industriously to replace the lost timber, but after three or four attempts to keep their dams in order, finding their work in vain, the entire colony would suddenly disappear to come back no more. And all the same, the rule is as I have stated. The exceptions are barely sufficient to prove it. If gentlemen in the Valley of the Mississippi who know of beaver towns would send notes thereof to *FOREST AND STREAM* it would make interesting and instructive reading matter.

NESMITH.

AMERICAN MUSEUM OF NATURAL HISTORY.—The autumn reception of the Museum of Natural History took place on Tuesday, October 26, and was an occasion of no little interest. A large number of visitors were present, among whom were many of the Trustees of the Museum and a number of scientific men from out of town. Among the recent additions to the collections were the Binney and Bland collection of shells, now arranged in the lower hall. This collection included the types of the species described by those authors in their work, and is thus of very great value. The skeletons of three native Australians form interesting addition to the osteological collection. The Maximilian collection of birds have been looked over carefully, put in order and mounted on new stands, and the collection of North American birds has been increased by the addition of six hundred specimens.

The Ethnological collection is now very large and contains many unique specimens.

The gallery stairway shows a detailed ethnological map of Africa, drawn on a large scale by Professor Bickmore. The additions to the ethnological collection from the South Seas consists of a war canoe (case No. 1), New Zealand weapons and carvings (case No. 3) and stone axes from New Guinea (case No. 4). The set of ornaments and carvings from British Columbia, presented by Mr. H. R. Bishop (case M), proved to be interesting, as many items were included which appeared unfamiliar to most people present. The geological hall received seven geological maps of Eastern North America, some quarries and other fossils from various formations. Cases A, B, C, D and E have been rearranged and labelled. In the desk cases specimens were placed which served to illustrate Dana's "Manual of Geology."

The collections are in admirable order and are under the care of careful workers, and the Museum is more attractive than ever. The Elevated Railroad has largely increased the number of visitors, and it is evident that its usefulness as a public instructor is only beginning. Its value to the schools of our city can scarcely be over-estimated.

SHARKS ARE VIVIPAROUS.—While spending the winter with my family in St. Augustine, Florida, I saw a large shark, about eight feet long, caught by some fishermen from the dock at that place. It was cut open in my presence, and from the womb there was taken some five young ones (there were this number at least, but might be more, as I took no notes), just about ready to come into the world, each having an umbilical cord. I took one of the young ones, and held it in the water and it was off in a second, showing that it was near its birth when its mother was captured. The others were killed by the fishermen, and were fifteen inches in length. F. G.

A MONKEY USES TOOLS.—It has been said that man is the only animal that makes use of tools, but the statement has been controverted, observation having shown that others animals do occasionally employ tools. This is especially the case with monkeys which in confinement have been observed to use stones to crack nuts, and sticks or leather straps to draw toward them objects which lay beyond their reach.

An instance of special training bearing directly on this point is given in a recent London paper:

Hollinwood, near Manchester, was the scene of a rather novel rat-killing match the other day, between Mr. Benson's fox terrier dog Turk, and a Mr. Lewis's monkey for £5. The conditions of the match were that each one had to kill twelve rats, and the one who finished them the quickest to be declared the winner. You may guess what excitement this would cause in the "doggy" circle. It was agreed that Turk was to finish his twelve rats first, which he did, and in good time, too, many bats being made on the dog after he had finished them. After a few minutes had elapsed it now came the monkey's turn, and a commotion it caused. Time being called, the monkey was immediately put to his twelve rats, Mr. Lewis, the owner, at the same time putting his hand in his coat pocket and handling the monkey a peculiar hammer. This was a surprise to the onlookers, but the monkey was not long in getting to work with his hammer, and, once at work, he was not long in completing the task set before him. You may talk about a dog being quick at rat-killing, but he is really not in it with the monkey and his hammer. Had the monkey been left in the ring much longer you could not have told that his victims had been rats at all—he was for leaving them in all shapes. Suffice it to say the monkey won with ease, having time to spare at the finish. Most persons present (including Mr. Benson, the owner of the dog) thought the monkey would worry the rats in the same manner as a dog does; but the conditions said to kill, and the monkey killed with a vengeance, and won the £5, besides a lot of bets for his owner.

NORTHERN NEW YORK.—*Moir*, Oct. 24.—Several bears have been seen near the village lately. Fourteen were seen last week on a farm only a mile north of the village. One was killed in the town north of this last week. A few days ago a large bear was in the dining room window here and was killed by the force with which he struck the window was found dead on the floor. They are very plenty in this vicinity. A. C.

## Sea and River Fishing.

### FISH IN SEASON IN NOVEMBER.

#### FRESH WATER.

Maskalonge, *Esox nubilus*.  
Pickereel, *Esox pinetorum*.  
Pike or Pickerel, *Esox lucius*.

### FISHING AT BELLE EWART.

NOW, let me try your geographical knowledge, just a little. Do you know where Belle Ewart is? Of course you don't, so I might have spared myself the trouble of putting the question, and you the humiliation of showing you don't know every hole and corner in the universe and everywhere else. No, it isn't one of those backwoods "go places that's never heard of beyond the nearest toll-gate." A few years ago its building lots sold by auction; saw-mills were in operation; lumber was shipped (by rail) to Buffalo, Albany, New York, etc.; it had a daily steamboat, a marine dock, and was the terminus of a railroad. In those days it was a place, and you should have seen it in its prosperity. There were life, and sport, and money there then; and good luck to the man who knew how to depend the land and enjoy the other two. Deer were found in its vicinity; at the market a few miles off, ducks were plentiful in their season; woodcock were not unknown, and it was just the place for partridge. But now it is a very quiet place, just the spot for those who wish to enter upon deep studies without the fear of being disturbed by railroad or steamboat whistles, the buzz and jarring of the saw-mills, the shouts and songs of the lumbermen, or any other real noise. Now, I see you're in a hurry, and wish to hear where Belle Ewart is situated, and what has wrought such a sad change in her history. *En route*. Listen. Just cast your eye northward along the N. R. R. from Toronto till Lefroy catches it or your eye catches Lefroy, a station 53 miles from the place of beginning, as surveyors say. Well, Belle Ewart lies about one mile to the north of that, on the shore of one of those beautiful bays for which Lake Simcoe is so famous. That's where it is. Now let me tell you what killed it. The Northern Railroad originally had its Lake Simcoe terminus here; the steamer met the morning train and conveyed the passengers to Barrie, Orillia and other points. In course of time it was decided to continue the road around the western extremity of the lake to Barrie and Orillia, and subsequently across the Narrows between Lakes Simcoe and Couchiching (Indian, I suppose, for "Wipe your chin") to Gravenhurst, Lake Muskoka. So Belle Ewart wasn't "wanted" any more by the railroad; the rails were removed from the track, and the embryo town was left to its own resources. "Pratie," who was "left alone." In short, the railroad brought the place into existence—gave it life; and the railroad has killed it—virtually destroyed its own offspring. Consequently the inhabitants don't much inhabit it now, and those that are left—well, don't bless the railroad. (Parenthesis.) The undersigned has hopes that the spot may yet return to its natural state again, and that at a very distant future it may be his "happy hunting grounds."

"Happy hunting grounds" may ask, What has all this to do with fishing? Pray, don't be impatient; there's always a good deal to be seen after when a party of seven citizens (beg pardon, subjects) are about to start on a week's fishing, miles from home and all they love. And is it not a fact that all authors have a preface or prelude to their works, while a good many interludes are generally dovetailed in to add interest to the tales?

Not to keep you and your patrons (I hope they are all paying—interlude No. 1) longer in suspense, to my fishing. After preliminary arrangements, Messrs. P. and W. H. M., Mr. Mac L. and your correspondent took the Northern one Tuesday morning, in the beginning of this present month of July, 1880, for Lefroy, thence to Belle Ewart by stage. As Mr. E. was to join us at Anzora, and Messrs. M. and K. at Newmarket, we took six rods, the necessary hooks and lines, minnows and landing nets, and enough worms to suffice for a month's fishing. Our three friends were in an appearance according to promise, and then seven as "jolly good fellows" were we as ever went a-fishing. According to universal custom on such occasions, every man had to get a new name, derived from some trait of character or appearance or deficiency. P. was dubbed by our French *compagnon* E. Poisson, because of a remarkable feat he had accomplished a few days before, by tumbling out of a boat into the natural dwelling place of fishes. W., because of his genial turn, just got Billy Boy. M., from his generous nature, got Pratie, who, was from New York, on account of his eloquence and philosophical observations, received Demosthenes; and as he had confessed that he had traveled at all hours from the Battery to 169th street without ever having hooked a fish, was advised to try his luck in a tub. E., in consequence of his nationality, got *La Grenouille*, while because of his diminutiveness, the adjective *pette* was interpolated between the article and noun, and thus he became *La petite Grenouille*, the little frog, whose *petite* is bound to turn the beam at considerably over 200. Mac L. got simply Mac. Your correspondent R., from the pristine gravity of his demeanor and the solemnity of his countenance, was permitted to retain his time-honored title of Deacon.

In the midst of our jubilee the car-door was opened and "Lefroy" shouted by a brakeman. Ourselves and impediments were soon off the train on the platform, and the stage inquired for; this was an open spring wagon, by no means uncomfortable, but more than one-half too small for the passengers offering.

Just as we were about to start three young men, probably clerks or students, approached and asked the driver what he would charge to take them and their equipage, consisting of a

factory cotton tent, trunk, and some other fixings, to the village. "Thirty cents," replied the man. "Thirty cents!" screamed the spokesman with horror; "I'll give you twenty." Presently he ascended to a quarter, and there took a firm stand; it was declined, however, and the thirty cents had to be given. "I can't take you on now," said Jehu, "but will be back for you in a few minutes." Accordingly, after leaving us at the hotel, he returned that mile for his thirty-cent fare. We had ordered dinner to be ready on our arrival a day or two ahead, and as from this circumstance we had been thought to be somewhat money, extra preparations had doubtless been made. The food was plain and substantial, and the manner in which it was served, as well as everything about the place, evidenced the greatest care and cleanliness. Presently the stage returned with the three young bloods, who were evidently bent upon having a good time at as little outlay as possible. No sooner were their effects out of the stage than the general manager, Mr. Baker, who was stage-driver and hotel-keeper all in one, would he let them have a boat for a week for. "Three dollars," was the reply. "Can't give that much," said the manager, and "must therefore try to hire one somewhere else." As he was walking off, "Won't you take dinner?" says Mr. B. "How much will you charge?" "Twenty-five cents each." "That's too much," and off he went. Shortly after, himself and his companions started for an island some two or three miles off in a hybrid, partaking somewhat of the character of a punt and wash-tub, which he had obtained for two dollars for a week, cash down, the owner doubtless concluding that if he never saw the craft again he would, nevertheless, be the gainer by about \$1.93.

"All aboard," was shouted along our line as each man took up his appropriated load of tackle, worms, or bottles (to put any rare fish we might capture in), or lunch, and filed down the almost deserted village to the wharf. Our man composed the entire crew of the safe and lively little vessel, but the landlord's son-in-law tied his skiff to the yacht's stern, and accompanied us. He proved a useful and obliging fellow. When we had sailed some five miles in a certain direction, all eyes were searching for the buoy which denotes a shoal. At last we approached it, when it was found to be nothing but a bare pole painted black, standing up out of the water. As this was the place for fishing, our useless trolling line was hauled in, looks temptingly baited with genuine Toronto worms, and every man was anxiously waiting for a bob of his float or a tug at his line. "Who'll catch the first fish?" cried Demosthenes. "Take to your tub," was the rejoinder, to the merriment of the party, while each one was doing his best to land the first bass on the dock.

"I've got one!" yelled La Grenouille. "The first fish. What you say to that, eh, Poisson, Billy Boy?" As we all threw worms and rods and line toward him. "Take care, or you'll lose him," quietly observed Pratie. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu!" cried G., with a national shrug of the shoulders as he peered in bewilderment, over the side of the boat. "He's got away with the first fish." "Take care, or you'll lose him," yelled La Grenouille. "No fear, I've got him tight. I'll show you how to catch the first fish," and he raised the bass from the water, in an attempt to land him. But that was a wily fish. He gave a knowing wink with his left eye, shook his head, twisted his tail, doubled himself up, and with a spring loosened the hook from his jaw and took a dive. "Parbleu

hook and heavy tackle, generally, for a powerful fish, often weighing fifty pounds and very gamy. They are taken from a boat, and when a stout bass rod with large reel, capable of holding fifty to seventy-five yards of heavy line, is used they afford good sport and only succumb when completely vanquished.

### FISHING IN FOX RIVER.

FOX RIVER sources in Lake Geneva, a beautiful sheet of water in the southeast corner of Wisconsin. It was named by the Indians "Kish-wa-ko-ta," signifying "crystal water," on account of its common transparency. Its outlet is Fox River, which flows down into the State of Illinois, then a little westward until it greets the waters of Des Plaines at Ottawa, where they together form the Illinois River. It is about twelve rods from shore to shore, and very uniform in width, like most rivers in prairie countries, where very few, if any, hills and rock ledges are encountered sufficiently formidable to interrupt their even flow. Fox River has a swift current and furnishes a splendid water-power, which is utilized by the many and various manufactories at Elgin, St. Charles, Geneva, Batavia, Aurora and other thriving cities and villages situated upon its banks. It also has attractions for sportsmen, armed with rod and gun. It is quite a rendezvous for wild ducks; many have been shot this month along this river. A neighbor of mine went out a few mornings since for a little hunt before breakfast. He brought home seven ducks, which he espied from behind a thickened shore disporting together in the river. With one barrel he killed three outright and winged two, which his dog soon retrieved; and before returning home he added the remaining two to their unfortunate mates. This was certainly a specimen of good marksmanship, and sport enough before breakfast to give a man a good relish for his coffee and to make him good-natured all day.

Also, the fishing is first-rate. Black bass predominate, though many wall-eyed pike are caught, the meat of which is, by many, considered superior and preferred to bass: it is very white, juicy and sweet. A party of four of us went up in August to South Elgin and caught, in one afternoon, fifty pounds of black bass and pike, the heavier ones weighing four pounds. I have been up twice since with a friend, and returned home with a handsome string each time. I find quite a number living on the banks of this river who have acquired the "wrist knock" and who cast a fly very gracefully and skillfully, and twist a spoon just right to entice and capture the wary denizens of the deep. A stranger, visiting any of the villages washed by the waters of Fox River, would soon learn that the fishing was good, from the display to store windows (that he could not help but observe) of reels, lines, hooks and rods—from the split bamboo and greenheart tackle to the commoner sort that boys begin their practice of the fine art with.

The stream is protected against fishing by barbarous methods. A member of the "Batavia Fish Association" relates how a man living in the vicinity would persist in fishing with a net, in spite of the law. One day he discovered, to his dismay, that a fatal dose of acid had been administered to his belligerent net, and with uplifted hands, he poured forth his lamentation: "Some tan rascal, he go and put on poison on my net all over, and he falls all to pieces like nothing." Who that particular rascal was he has never been able to ascertain. The trick proved effectual; it not only put an end to his net, but a stop to his fishing after that fashion. It has occurred to me that a summary enforcement of the game laws, by a free use of acid, anonymously applied, might be the easiest, cheapest, surest, and best way to secure protection against the many unaturalized pirates and butchers that infest our lakes and rivers.

### A PLEA FOR THE "SUNFISH"—[Eupomatia.]

CLEVELAND, O., Oct. 21.

Editor Forest and Stream:

You speak of the "sunfish" or "pondfish" as a worthless animal. How can you say this of a fish that gave so much sport to me in my boy days, and is ever the pride of the youthful fisher? He is harmless, never eating the spawn or young of any other water animal, and as a pan-fish he is not excelled; a beauty in his spring colors, and second beyond all measure. In June he fans out his round nest, a foot in diameter, in the fine sand, deposits his eggs and milt and guards them closely until the young are able to care for themselves. Please remember that little boys and girls like to go n-fishing. I am in favor of the sunfish and bullhead (see Dr. Garlick's book, page 106). In the summer months the sunfish will take the fly as readily and with as much vigor as the bass. Fishing with the seine is much practiced during the winter under the ice in the marshes and marshes on the south shore of Lake Erie, when the fishes of the locality bed in the sunken water-weeds in numbers almost incredible. I have seen taken at one haul of the net seventy-five barrels, consisting mostly of sunfish, straw bass, big-mouthed bass and a few pickered. The flat fish are sent to market, skinned and dressed, and bring readily ten to twelve cents per pound. Excessive fishing has finally exhausted this harvest. Would you believe me when I relate that I have seen five cords piled up frozen in one mass? But it is so, and the entire lot was taken in the space of three acres of water. No wonder they are all gone, and hardly a "kiver" or straw bass of a decent size remains to tell the tale.

E. STERLING.

CATFISH TAKE THE FLY.—A correspondent writes us as follows: "In your last issue I notice that a catfish was taken with a fly in the Pardalones River, Texas, and that you speak of the event as the first recorded instance of this kind. I send you herewith an extract from a letter to the Syracuse, N. Y., Journal, of April 5, 1880, written last winter by the well-known sportsman Mr. James Geddes, of that city, who took a ten-pound catfish on an eight ounce Skidmore rod." The fact that these fishes take a fly at all is new to us, and we are glad to place the valuable testimony of so excellent a fly fisher as Mr. Geddes upon record. Here is the extract:

At Palatka we found that the hotel on Drayton Island, near the fishing ground we were bound for, had been burned, so we went by steamer to Mt. Royal, where we found Messrs. Kirby and Wright, of Auburn, N. Y., living among the aquatic groves. We were entertained a large salt cod of Mr. Varnum to take us over the twelve miles between Mt. Royal and the famed Salt Creek. This creek is made from a huge spring

about five miles from Lake George, which lake is simply a widening of the river St. John. After a delightful sail of two hours we cast anchor at the mouth of the creek and went over the bar in a small boat. When once in the creek you are in water as pure and clear as crystal. Up the creek to the grand pool at the spring the sportsman is in his paradise. The Captain joined his eight-ounce fly rod, while I did likewise, and business commenced. Hardly a moment passed when I heard from the other end of the boat, "Ain't he a whopper!" and I cast my eye over my shoulder to see the Captain wrestling with a monstrous bass. At that moment I was fast to his mate, and the fight went on; first out of the water four feet, then the whirl of the reel and he would run fifty feet before another leap. At last they were brought to net, and a pair of Oswego bass lay at our feet that would crowd six pounds each. The sport continued till the skipper who accompanied us stood up to his knees in fish, and suggested that it was about time for lunch, a suggestion always in order. We dined from a well filled lunch basket at the side of the great boiling spring, among tropical scenery and vegetation. The lunch over we again took our places in the boat, when the Captain fastened to another "whopper," and seemed to have the game all in his own hands, as I had seen him land three large bass and I had not had a rise. But I had my revenge. Soon after came to my fly—which, by-the-by, is an R. W., named after our renowned and accomplished sportsman, Reuben Wood. "A fish of huge dimensions. I strike, and in a moment fully fifty feet of line run out. To the surface he came, but not to jump, and what did I see. Only a glance. It looked very much like an enormous catfish, but I could not believe a catfish could ever be induced to come up twenty feet for a fly; but the R. W. has been known to do unheard-of things. The Captain said, "You have got the boss bass this time." I replied, "Catfish." He said, "Nonsense; such a thing was never heard of." I still insisted on a catfish. The skipper said, "Huge bass," and I "cat." The Captain wagered a bottle of the best wine if it was not a catfish. I accepted on the understanding that the fish must be brought to net to decide the wager; and Mr. Editor, I had a twenty minutes' fight with that cat, and any one who says that a catfish on an eight-ounce rod is not "some pumpkins" is sadly mistaken. The pliant Skidmore won the day, and Mr. Catfish, of about ten pounds, was safely landed. The Captain looked and said, "You always were hooking all kinds of monstrosities, and now you have gone and hooked a catfish. I give up the bet."

Two hours later the bass, and our boat looked like a fish market, and the Captain said, "If we were not fishing for market, we had better quit," which we accordingly did, and at 10 p. m. were again at our hotel, having enjoyed a splendid day's sport, like many I have enjoyed in the same pool in years gone by.

This creek can never be depleted, as the immense river St. John sends up its millions of bass into this pure, clear spring, which, not liking the warmth of the river, remain there. The spring is enormous, making a creek two hundred feet wide and ten deep.

On this subject our Cleveland, O., correspondent, Dr. E. Sterling, writes:

You speak of the catfish taking the fly. I had one take a red spoon that was dangling two feet above the water; and "cat" has an adipose dorsal fin. Taking these facts altogether do you not think it might have contained some salmon blood?

We can't say; we only know that, dazed with wonder as we are, we would not be surprised if it could be shown that the gentle catfish, who usually gropes the bottom and roars, when he does roar, as gently as a sucking dove, was even now a-evolutin' into a fierce fly-devourin', lofty tumblin' salmon, a-go'in' about a-seeking what inoffensive insect he may devour.

SMELT FISHING.—This is the way this dainty little fish is taken near Boston, as told by the Sunday Budget:

Almost any of these frosty mornings groups of fishermen may be seen along the city wharves, with rod and line and the strawberry box for bait, endeavoring to catch these shifty little denizens of the harbor. The season is now at its height and will continue until the first fall of snow, when they disappear for a period. About the first of January they are again abundant and may be caught through the ice until the first of March. The best time to catch them now is during the flood tide, on days when the sky is overcast and the air cool. They may be caught at almost any of the wharves, although there are a few places where the fish congregate in considerable numbers, especially where the incoming tide makes a small whirlpool eddy around the piles of the wharf. The unfrequented wharves of the Mystic River, and the stone walls at the mouth of the Mystic River, and the Boston & Albany railroad bridge, between East Boston and Chelsea, are favorite resorts for fishermen, large numbers of smelts having been caught at the latter place. There is a law in this State against seining the fish, and consequently they bring a good price, twenty cents a pound being asked at the markets, and there is always a demand for them. A slight pole, delicate tackle and fresh shrimps are needed, and if the sportsman is skillful—for there is quite a science in securing them—a good haul may be obtained.

SPAWN FISHING IN THE RANGELEY LAKES.—Boston, Mass., Oct. 29.—Editor Forest and Stream: In your issue of the 28th instant is a paragraph relating to the taking of large trout in the Rangeley Lakes, in which it is stated that many large fish were taken this fall by the use of spawn as bait. Although the paragraph referred to does not state it, it is a fact that the eleven pound brook trout it speaks of as having been taken at the Upper Dam was captured by the use of spawn, after every other method had been exhausted. This noble fish, which attracted much attention when exhibited in Bradford & Anthony's window in this city, and which was afterward purchased by the Smithsonian Institution, was one of several large trout which had for some days been seen on the spawning beds, and which many expert fishermen endeavored to capture by means of various and seductive flies and worm bait without success. Finally, taking advantage of the fact that few trout can resist spawn, some persons who cared little for the future of the fishing, and were only anxious for the evanescent glory of making a big score, resorted to the use of spawn, and the big fish in question was one of the victims.

And other parties who had permits to fish out of season, granted them by the Fish Commissioners, adopted the same practice with such success that in five days they took over

fifty breeding trout, weighing in the aggregate over two hundred pounds. Every fish was taken from off the spawning beds, and no man can say how many young trout which would have aided in the restocking of that great fishing resort were destroyed by these captures.

If, as is claimed, there is no law against the use of spawn as bait, it certainly seems as if the law to that extent should be changed. Further, it is pertinent to inquire what right the Commissioners have to grant such permits, the exercise of which produces such fatal results. If there is no legal way of prevention, it only remains to appeal to an enlightened public sentiment, of which your journal is the best exponent, and to ventilate this subject thoroughly, to the end that so-called gentlemen fishermen, who hide themselves behind a claim of legal right, may be shamed into a compliance with the requirements of fair dealing, and so made to abstain from spawn fishing, than which no more destructive method of killing breeding trout has ever been devised.

The influence of your paper is invoked in favor of  
FAIR PLAY.

THE NORTHERN BARBAUTA.—This small fish is more plentiful on our coast than is suspected. Its small size and agility almost always enable it to elude the net. They are plenty in Peconic Bay this season, and last week Mr. John Tallmadge, a fisherman of Sag Harbor, N. Y., saw a big school go through his net as he was raising it, but only one happened to be caught. He showed it to us, and we identified it as *Sphyrapne borealis*, DeKay. The fish is usually eight to ten inches long, and about three-quarters of an inch in diameter. Its teeth are formed into so small a fish, resembling a pike's somewhat; the lower jaw is the widest; two dorsal fins, with a wide space between them; head about one-third of the length. The fishermen generally do not know this fish for the reasons given.

OLD CANNED SALMON.—A Maine paper is responsible for saying: "At the office of the Portland (Me.) Packing Company is a can that was packed with salmon in 1814. The vessel in which the can was shipped was wrecked, and a short time ago this can was taken from the wreck. It was opened the other day, and the contents were found in perfect condition."

THE MACKEREL OATCH.—Newport, R. I.—The fishing has now settled down to mackerel, very few boats going after fish. The mackerel that are caught now are mostly No. 2, and very fat, with quite a lot of No. 1 among them. The boats go with two men, and average from 50 to 200 fish to a boat. They are caught anywhere from Gould Island out to the light-ship.

OCCASIONAL.

## Fish Culture.

### AFTER BIG TROUT EGGS FOR IOWA.

BEING here in company with my father, Mr. B. F. Shaw, for the purpose of securing salmon trout eggs for our State (Iowa), a few lines from this section of the country may be of interest to you.

Grand Marais (pronounced Mo-Ray) is situated 105 miles from Duluth, on the north shore of Lake Superior, in Cook County. This country is about 70 miles long by some 20 to 50 wide, with a white population of 15 men and one woman. The balance of the population are mostly Indians, of the Ojibwe (Chip-pe-wa) tribe, together with a few half-breeds, mostly Indian and French, in all about 200. We arrived here a week ago yesterday. On Friday last we had secured about 200,000 eggs, but on Friday night a storm destroyed about half of them.

The storm is said by those who have lived here for the past 12 years to have been the worst ever known. Many of the fishermen lost their nets, boats, fish, fish-houses, and in many instances their dwellings. The storm has left us such continued bad weather that the fishermen have been unable to lift their nets, and until it changes for the better shall be unable to secure any more of the 2,000,000 eggs that we want.

The country is covered with snow; on the trail up and down the lake shore it is reported to be 14 inches on the level. The temperature here for the past three days has been below freezing, and the inland ponds are frozen over. A good many caribou are killed here during the winter season.

Grand Marais, Minn., Oct. 19. E. R. SHAW.

GROWTH OF CARP.—Office of the Fish Commission, Austin, Texas, Oct. 4, 1880.—Professor Spencer F. Baird, Washington, D. C.—Dear Sir: I saw a day or two ago one of the carp sent me last winter (these fish were the young of 1879 and about three or four inches long when received); it measured twenty inches. I am inclined to think they spawned this last summer, for the reason that the pond is now filled with small fry, unknown before in the pond. Should it prove to be correct I will inform you. Respectfully,

J. H. DINKINS, Fish Commissioner.

GROWTH OF CARP.—Mr. Geo. W. Hopkins, of Mount Simi, Long Island, N. Y., received some carp last spring from the national carp ponds at Washington, through Mr. E. G. Blackford, Commissioner of Fisheries for New York, which were then about three inches in length, but by the first of October would measure from twelve to fourteen inches.

THE ILLINOIS FISH COMMISSION.—Another addition to our list of Fish Commissioners comes from Illinois. We stated that the term of Mr. Briggs had expired and that no appointment had been made in his place. We wrote him on the subject, but it appears that he was absent. The following has just been received:

KANKAKEE, Ill., Oct. 25.

Editor Forest and Stream: I find your notice of the 5th inst. awaiting my return home. My appointment as Commissioner of Fisheries was for the period of one year, dating from the 24 day of July, 1879, with the right to hold over until my successor shall be appointed. I have not been notified of the appointment of a successor.

J. SMITH BRIGGS.

CARP FOR DISTRIBUTION IN NEW YORK.—Mr. E. G. Blackford, of the New York Fish Commission, has received from Prof. Baird a lot of 1,000 young carp for distribution. The fish are about three inches long and can be had by applying

to Mr. B. at Fulton Market, New York, either personally or by letter.

If the early worm catches the carp, those who would like to obtain a few of them may try the effect of an early letter, which will probably answer the purpose as well as any other bait for this particular school of fish.

—Ladies, do you want to be strong, healthy and beautiful? Then use Hop Bitters.

## Game Bag and Gun.

### GAME IN SEASON IN NOVEMBER.

Moose, *Alces americana*.  
Caribou, *Rangifer caribou*.  
Elk or wapiti, *Cervus canadensis*.  
Red or Virginia deer, *C. virginianus*.  
Squirrels—red, black and gray.  
Hares—brown and gray.  
Reed or rice bird, *Dolichonyx oryzivorus*.  
Wild Turkey, *Meleagris paluparica*.  
Pinnated grouse or prairie chicken, *Cupidotus cygnus*.  
Ruffed grouse or pheasant, *Tetrao americana*.  
Quail or partridge, *Ortix virginiana*.  
Sora, rail, *Porzana carolina*.

Woodcock, *Philohela minor*.  
Black-bellied plover, ox-eye, *Squatarola helvetica*.  
Long-billed curlew, *Namnetus longirostris*.  
Turnstone, or calico back, *Streptopelia interpres*.  
Red-breasted snipe, dowitcher, *Tringorhynchus griseus*.  
Red-backed sandpiper, or ox-bird, *Actinoneta americana*.  
Great marbled quail, or marlin, *Mareca feldia*.  
Willet, *Tringa semipalmatus*.  
Tattler, *Totanus melanoleucus*.  
Yellow-shanks, *Totanus fuscus*.

This enumeration is general, and is in conflict with many of the State laws. "Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf-bird, phalaropes, avocets etc., coming under the group *Linnæus*, or shore birds. Many States permit prairie fowl (pinnated grouse) shooting after Aug. 15.

### A FAG FOR QUAIL.

CLEVELAND, O., Oct. 23, 1890.

#### Editor Forest and Stream:

Some years since the following verses—as near as I can recall them—appeared in the *ROD AND GUN*. It is a concise description of a "Fag for Quail," and very appropriate at this time—the opening of the quail season. I hope you will think best to republish them:

The ancient farm-house—drowsiest bed—  
Early breakfast—dags lightly fed;  
With trusty "gas-pipe"—"leash," "to heel"—  
True sportsman's ardor blossomed to feel.

"He on!" The cornfield stubble sarge,  
The brush's fence at coppice's verge;  
Oh, hounds! right! The heart-strings burn  
In true accord with the lashing "stern."

Ha! Topsy "stands," the pointers "back,"  
With quivering form the huddled pack;  
"To-ho," good dogs, a noble "find,"  
Step close the trembling blind behind.

The bevy flushed, our star is kind—  
Two tufts of feathers down the wind;  
The replaced shades—"Hold up! Dead bird!"—  
Fetch! fetch! With willing step, retrieved at word.

A noble brace, with smoothed plume,  
Within the game-coat's spacious room;  
Well done, brave dogs; well done, good gun;  
So mote it be till the setting sun.

Is man good brother, ever blessed  
With satisfaction, mind at rest—  
Freedom from care, from business fogs,  
So much as when, with gun and dogs,  
O'er field and marsh and wooded place?  
He feels his game-bag grow apace.  
With action right, his killing clean,  
His misses few and far between;  
Dogs wide of range—none better broke—  
His snap-shots good, without a poke.

ME HIT ABE.

### LONG ISLAND SPORTSMEN'S ASSOCIATION.

THE regular monthly meeting of the Long Island Sportsmen's Association was held at the Royal Arcanum Rooms in Music Hall, Brooklyn, Friday evening, Oct. 29. A full delegation from each club was present, with the exception of the Long Island Fresh Kill Club.

Abel Crook, Esq., read a letter which he had received from Mr. George A. Chappell, the President of the Long Island Association, in which he had been requested by the writer to proceed against certain violators of the game laws.

Relative to this, Mr. Crook reported: "On October 19 my attention was called by your Vice-President Aten to an alleged violation of the game laws. The witness named was Mr. Gordon. On October 21, by appointment, Mr. Gordon called upon me and stated that on Friday, October 17, near Woodhaven, he heard shooting. On investigation he discovered Mr. Brower, of the Long Island Shooting Club, and two others. As he approached, one Midler (a barber) said to Brower, 'Your dog has got a bird.' The dog lay with his forefoot upon a quail. Midler picked up the quail and pocketed it. I told Mr. Gordon that if his story were substantiated Midler could be prosecuted, and asked him if he would make affidavit. He replied that he had heard that threats had been made against him, and he would not be willing to go to court nor to make an affidavit. Under the circumstances I was powerless to proceed, and report the matter for your information. Your President, Mr. Chappell, volunteered to assume the prosecution if sworn proof were furnished."

This created considerable excitement, and several members said that Mr. Gordon had told them the same story, and Dr. Aten was willing to make an affidavit to that effect, but as it could not be used as evidence it was not taken. Dr. Wynn, the president of the Long Island Shooting Club, moved that the words "Long Island Shooting Club" be stricken out of the report, as Mr. Brower did not kill the quail, and if he was prosecuted the club would stand by him with both men and money. Upon this Mr. Eddy said that while he was a member of the Long Island Club there was one man who would not shield any member that violated the game laws. After a hot discussion it was finally decided to accept the report with a vote of thanks to Messrs. Crook, Aten and Chappell, and it was voted that the shooting be investigated by a committee

to be appointed by the Chair. The following gentlemen were appointed on the committee: Messrs. Havemeyer, Crook and Aten.

Next was the report of the Committee on Grounds. Mr. Robinson, chairman of the committee, reported that they had decided on the racing park at Brighton Beach, Coney Island, owned by Mr. Engeman.

It was decided that the secretary should confer with Mr. Sage, of Buffalo, and request four more traps to be used at the next State shoot.

In regard to the game law analysis published in the *FOREST AND STREAM*, suggestions had been received from Mr. E. S. Wager, of Rome, as follows: "Every person building or maintaining a dam upon any of the fluvial waters of this State, which dam is higher than two feet, shall likewise build and maintain, during the months of March, April, May, September, October and November for the purpose of the passage of fish, a sluiceway in the mid-channel at least one foot in depth at the edge of the dam and of proper width, and placed at an angle of not more than thirty degrees, and extending across the dam, and such sluiceway shall be below the dam, which sluiceway shall be protected on each side by an apron at least one foot in height to confine the water there."—Laws of New York, 1889, vol. ii, p. 2316, 716.

"The game law of 1880 is deemed to have repealed laws of 1869, hence we are without a very valuable game law, which I think the compilers of the statutes had no intention of renewing."

"At Piseco Lake, Ham. Co., N. Y. (head of Hudson River), on the outlet of said lake there is a dam. In the fall the trout leave the lake, pass over this dam into the stream to spawn, but are unable to return up this dam into the lake in the spring. In a few years this lake will be destitute of trout unless it be for above act, which will compel the owner of that dam to maintain a sluiceway."

Mr. W. Thiese, of the New York *Jagd Zeitung*, wrote: "I wish to call the attention of the committee preparing the new game laws to § 37 of the present law, giving the supervisors of the different counties the power to enact their own game laws, and prescribe punishments and penalties for all violation of the same. If such a provision will be adopted in the new law two points ought to be added.

"1st. A limit of such punishments and penalties should be stated, which should not exceed in the different cases those of the State laws.

"2d. Some means should be provided to make these special county game laws more generally known."

"At present it is sufficient if any county enacting such a law publishes it in the papers where the session laws are published. Such papers, in many instances, have a very limited circulation, and the majority of hunters from all other parts of the State will never be aware of those laws. I should think that all papers, especially those devoted to the interest of sport, should publish such laws also. The clerks of the different counties should be directed by law to send a copy of such enactment to any paper that applies for it."

These letters were referred to the Committee on Fish and Game.

It was decided that the Chair should appoint a committee of five to select prizes for the next tournament. The stock certificates were now issued, and each club, with the exception of the L. J. Forester, sold to the Washington Gun Club eight shares of stock, as the Washington Club had not been able to procure them. It was then decided that the rest of the money due on the stock should be paid as follows: On or before the 15th of November, 10 per cent.; on or before the 1st of February, 20 per cent.; on or before the 1st of March, 25 per cent.; and on or before the 1st of May, the remainder.

Mr. Nicholas Pike, one of the veteran sportsmen of the Island, then addressed the meeting, urging the need of stringent game laws to put a stop to pot-hunting of the game on Long Island. Mr. Pike's remarks were right to the point, and he was tendered the thanks of the Association for his suggestions. After this came the new sportsman's song, sung by the Washington Gun Club Glee Club. It was well sung, and was received with approval and accepted as the song of the Long Island Association to be sung at an appropriate time at the State Convention. The meeting then adjourned.

The Long Island Association have taken a determined stand on the question of breaking the game laws, and are determined to put them into effect if no matter what it costs. We may now expect to see an advance in sentiment and practice on Long Island.

### PHILADELPHIA LETTER.

IN order to procure the opinion of our leading sportsmen of this city regarding October quail shooting I have asked a number the question as I casually met them on the street: "How have you found quail this season?" and in every instance but one received the reply: "Have not been out, never go until November," or words to this effect. It may be related upon that thinking men are opposed to the law now in force. We have been having some cold weather lately, occasioned, no doubt, by the snow-storms that have occurred in the northwest, and the blow down the bay has driven quantities of ducks up the river. I have learned likewise that "Slaughter Neck" and "Prime Hook" marshes in the Milton and Milford, Del., sections are alive with widgeon and sprig tails. What sport could be had there if a good blind could be made on the borders of one of the ponds with these numbers of the ducks as they come in to feed. It strikes me a capital plan to follow would be for a party to go down by yacht with their skills, make their home on board and take advantage of the early morning and evening shooting wherever they discovered the ducks frequented. Being directly in the neighborhood of a capital quail and likewise snipe country, dogs could be taken aboard on the trip, and varied sport could be had. Your correspondent wishes to make this expedition next year, and has promised himself the pleasure of the next year. During the past week I have taken a flying visit to Bath and Washington, and while at the former city the fox-hunting season was opened by the Elk Ridge Fox Hunting Club, on Saturday, the 23d. The weather during the day was splendid for riding, and the early morning, though a little cool and windy, sent the blood dancing through the veins of the horsemen as they rode through the streets on their way to the meet. About seven hundred members left, Mount Vernon Place at an early hour and rode down Charles street and over Long Bridge to Brooklyn. Those who were on the street were startled to see so many red coats and vests and spirited-looking horses and handsome men, for to the uninitiated it did not come into their mind that they were fox-hunters. The company was reinforced at the meet by several other members. Barnaby, with the club's hounds, was also waiting their arrival. The dogs were thrown off and soon found a

fox. The chase was a long and exciting one, and greatly enjoyed by all, and what was better than all Reynard was caught. Many fine hunts were made, and the ride across country was delightful. The season was successfully opened. The hunts will follow in quick succession as the club's members, besides a number of ladies, are anxious for this delightful sport.

I hope to give you now and then an account of some of the meets of the Rose Tree Hunt, which is composed of some of our most prominent Philadelphia and Delaware County citizens. You may remember the club's hounds have been very successful prize winners at late touch shoots. The pack is a noble one, but not at all in accordance with the ideas of our English cousins as to what hounds should be. Where we admire the long and pendant car they require them to be rounded. In speed their dogs are superior; in scenting powers, never. Our animals, from the fact that a great part of the chase is made in cover and through woodland and thicket, are not required to be so fleet and greyhound-like on foot. While their dogs owing to the open country in which their hunts are made, often run down the fox in half an hour, here a chase frequently lasts a good portion of the day.

While in Bath we heard good accounts of the kennel club of that city, and that the association derived much pleasure from this union of lovers of fine bred field dogs; but we fear the gentlemen comprising it cannot be prevailed upon to undertake the giving of another Bench Show very soon, both the club and the proven financial failures. It is so with the Philadelphia Kennel Club, notwithstanding the display made by them was the finest we ever saw of high bred setters and pointers—the very mention of a Bench Show seemed to disgust them; in fact, we may say there exists no Philadelphia Kennel Club. What think you, dear Editor? We know of an owner of some of the finest setter and pointer blood in the world, right in our midst, whom we verily believe could not tell a woodcock from a snipe, or a ruffed grouse from a pinnated one, yet who would not like to shoot over his dogs, once in a while, and over some of his animals. It is not a show. How unfortunate it is that gentlemen who are not calculating in any manner for field sports, notwithstanding wealth and time are at their disposal, will become inoculated with the dog fever, and attempt to gain that which they never can accomplish. Money will not purchase this talent, or "knack" as we may call it. In a great measure a sportsman is born such, he inherits the taste, and the owner's children that he becomes a student of their peculiar ways. Truly to love the field is the gift of God; it cannot be purchased, and when it is attempted it can readily be discovered. I mention also a case of a lady of a city not far distant from yours who has offered a large price for a blue blood as a house dog. She wants a full pedigreed animal—nothing else will suit her; one that has gained laurels on the bench and at field trials; and she is as determined to have her longing as her purse is deep and full enough to make the purchase at once. Dear Editor, do advocate ever—a horse for the race, a dog for the chase, and a gun only for the sportsman.

Last week several flocks of wild geese were seen going southward and flying high over one of the rural districts of Philadelphia. This is rather early and points to cool weather. We hear of no brant as yet on our Jersey bays, but if the wild geese could be seen they may fully expect *Branta bernicla* to follow shortly. Then for his guns, rough work and great appetites. Capt. Bond will be ready this season to pilot all who desire brant shooting in Tuckerton Bay, and we can fully recommend Capt. Marshall, Shoris, Downs, Smith or Morris, at Tuckerton, as able to place any of your readers in the line of flight of this fowl. But remember no quail gun is wanted—a twelve to fourteen pound pipe is the proper weapon, with plenty of powder to drive No. 1, or single B shot, and make effective work at forty yards. If any of your readers should try the brant at Tuckerton, please postpone their departure until the first week in November. Take the R. R. for Tuckerton, cross the bay to Capt. Bond's Long Beach House, engaging their men at Tuckerton, and when the first flock of fowl come to stool make a shot and tell the men to do the same for the sportsman.

### CHOKE-BORING GUNS.

HAVING derived much pleasure from the perusal of the articles and correspondence in *FOREST AND STREAM* on the properties and performance of shot-guns, it has occurred to me that it might interest some of your numerous readers if I should undertake to experience in the boring and shooting of the same—extending over a full half-century. In the summer of the year 1830 I made the acquaintance of Mr. William Greener, who had a short time previously commenced the business of a gun-maker in a shop on Collingwood street, Newcastle-on-Tyne, England, and had many conversations with him on subjects connected with his trade. About this time the country began to be inundated with factory-made guns, of the "Brunnenger" class, which were got up with sham twist, varnish, etc., so as to counterfeited gunmakers' work and deceive the ignorant and unwary, and which were rapidly transferring the trade in the lower-priced grades of guns from the gunmakers to the hardware men. In order to counteract, at least in part, this tendency, Mr. Greener conceived the idea of publishing a pamphlet, exposing the true character of these specious but inferior, and, to the owners of many cases, dangerous weapons; and, in order to qualify himself for such exposure, he visited Birmingham and made himself acquainted with personal observation, with the whole process of manufacture from the raw material to the finished weapon. On his return he brought with him samples of the several sorts of iron and steel used in the making of barrels, from "twopenny skep" up to "wire-twist" and "Damascus."

Through the kindness of my esteemed friend, the late Sir Robert Irons & Co., I got for Mr. Greener the use of the testing machine, and the use of the same. Messrs. Irons & Co., and from the data obtained by its use, I calculated for him the resisting power of each sort in barrels of a given thickness, and the strain to which they would be subjected with a given calibre and weight of charge. With these results, and the information he had obtained at Birmingham, Mr. Greener found himself in possession of a mass of matter suitable for a work of a higher class and greater extent than his first intended pamphlet, and in due time he published it under the title of "The Gun." Unfortunately, however, the author, being ignorant of the requirements of the book trade, did not bring his work before the public through the acknowledged channels, and, instead of improving his circumstances, its publication resulted in his being compelled to make an assignment, when the copyright passed into other hands. The new proprietors took the necessary measures as to advertising, reviewing, etc., and the book

became known and appreciated as an acknowledged authority on the subjects of which it treats. Shortly afterward Mr. Greener received an advantageous offer from a Birmingham house, of a partnership, to superintend the manufacture of a superior description of sporting guns, which he accepted; and, on his leaving Newcastle, my correspondence with him ceased.

The recollection, however, of the discussions I had held with him incited me to endeavor by experiment and calculation to discover some method by which closeness and strength might be combined in such proportion as to enable a fair marksman to bring down his bird with some degree of certainty at distances from fifty yards to seventy yards. I therefore procured a few old gun-burels, and after spending most of my leisure time for nearly two years in boring and trying, and considerable time in making calculations and diagrams, I succeeded in establishing a formula, from which I deduced the following rule of proportion: "First, make the bore a true cylinder; then divide the length into seven equal parts; open the bore at the breech end one part, with one slip of cartridge paper, and again insert the bit one-half part with a second slip; leave four parts cylinder, and open downward from the muzzle two-sevenths, using three slips, so as to make a tapering relief for the charge on leaving the gun. I have bored many barrels upon this principle, and invariably with good results. For example, the following is the record of a trial made last year, of three single guns bored to this formula twenty-four years ago, and well used during that period. The conditions were those prescribed in *FOREST AND STREAM*, namely—40 yards distance, 30-inch target, 1½ ounce Canadian soft shot No. 7 and 2½ drs. Hamilton Co.'s diamond grain black powder:

No. of Gun.	Length.	Calibre.	Weight.	Average.
1	32in.	.42	7½ lbs.	143 pellets.
2	32in.	.42	7½ lbs.	143 "
3	32in.	.42	7½ lbs.	128 "

All strong enough to bring down a duck at sixty yards.

In my opinion this mode of boring is all that is requisite for ordinary shooting at such game as quail, partridge, snipe, woodcock, squirrels, etc., as a very close-shooting gun is apt to mangle her game at short distances; but for hard shooting at longer distances, such as snipe, quail, woodcock, and the chokewad, is undoubtedly very superior. After reading the accounts of gun trials which have lately appeared in *FOREST AND STREAM*, I became anxious to learn in what "chokewad" consisted, and having an opportunity of examining a fine English breech-loading gun belonging to Lieut. Col. Hulme, of this city, I found that, like most good things, it was exceedingly simple and easy of execution. Having in my possession a fine single gun of .11 calibre, 7½ lbs. weight, 32in. long, the average of which had been reduced by long use to 27, I tried the experiment of "choking" it with the following result, conditions as before, but with 2½ drs. powder: First shot, 187; second shot, 186; third shot, 202; fourth shot, 189; average, 191. Nos. 1, 2 and 4 were fired under the disadvantage of a strong west wind blowing in gusts across the line of fire. No. 3 was fired in a calm interval.

Since the above trial I have choked gun No. 2 of the former record, with the effect of raising the average from 133 to 180. Verily choke-bore makes a wonderful improvement in the killing power of a gun, which is generally known and appreciated, every owner and user of a shot gun will have at least one of his barrels "choked." My powder charges may seem light, but I have found that a patent-breeched gun requires full one-sixth less powder than a flat-breeched one.

JAMES T. BELL.

## RUFFED GROUSE SHOOTING.

RUFFED GROUSE and woodcock are here in Western Pennsylvania in fair numbers this season, and it has been my good luck to have been principal or accessory to the killing of eighty-four of the latter. Grouse, however, stand first in my estimation for many reasons. A dog of the proper spirit, highly broken on ruffed grouse, will soon make himself at home on any other game bird; but the reverse of this statement will not hold good—at least such has been my experience.

I believe that the ruffed grouse of Western Pennsylvania are more difficult to hunt successfully than are the same species elsewhere. Words almost fail to describe the nature of our grouse country. It is grandly wild, and these birds appear to partake of the nature of the country. In Forest County there are spots where snow may be seen until summer, and where I have waded with a noiseless step ankle deep in the velvety moss among the giant pines. The man who can bag six out of twenty shots through thick and thin, counting every bird within range—that is, no selection of shots—is an artist such as I have rarely seen, although I know a very reputable gentleman who claims to have killed his fourteen successive shots. There is no more interesting sight to me than the variegated, frost-bitten foliage covering the hills as far as the eye can carry, and no greater enjoyment than to sniff the bracing air of these enchanting October mornings, and no more glorious music than the whirr and whistle of the rising grouse, or cock, especially when out for a day with the dog and gun.

Two or three years ago, while visiting at my old home in New Jersey, a gentleman in speaking of ruffed grouse remarked in my hearing that in the State of Maine these birds would hardly give way to the pedestrian, and upon being flushed would almost invariably "tree." Now, I have resided about fourteen years in Western Pennsylvania, and have spent not a little time with the birds of which I write, and excepting during the warm, pleasant weather—say up to Oct. 15—they very seldom "tree" when flushed. On the contrary, after the first few frosts a bullet (the only companion I have in mind at present) is hardly more prompt and direct in its flight.

While the brood are yet young, however, and before scattering, they not infrequently take to the trees, but after the date above mentioned, for every one that will flush into a tree there will be forty that will place a good sixty yards behind them with such astonishing celerity as to rivet the hunter, if he be a novice, with the species of "buck fever."

From this date I would prescribe from 34 drams to 44 drams of best powder, and from 1 to 1½ ozs. (according to the calibre) of No. 8 or 7 shot, correctly delivered, as being the only legitimate mode of making their closer acquaintance; and even then, many a time and oft have I strained my vision in watching one carry away the whole charge, in momentary expectation of seeing him fall, but with wings rigid in a death-stiff float away on the wind by the force of his impetus. The breaking of a wing is the only way that I consider certain of dropping him at the shot, and then if wing-broken only, even

with your skillful old setter or pointer, the chances are not largely in your favor, as he is an adept in running and skulking.

Before my advent in western Pennsylvania I was fairly proficient on woodcock, snipe and ducks, but for the entire season, during my initiation into ruffed grouse shooting, my only quarry was but a single bird. Their startling whirr as they rose seemed to unnerve me, and before my gun half reached the shoulder my finger would involuntarily find the trigger in spite of all previous resolutions, and I rarely could tell whether I had held within an inch or a yard of the bird. Everything considered, the ruffed grouse, in my opinion, is the noblest of our game birds. He is a handsome fellow, especially as seen in his fall plumage, with ruff and tail spread, strutting after the manner of a cock turkey. A strong natural taste for the sport, with skill and muscle of the highest order in man and dog, is required to hunt him successfully in this section. He is a fine, large fellow, his flesh is clear and white and his gastronomical qualities are excelled by but few birds; and finally, the man and dog who have graduated on ruffed grouse, to quote, are "top sayers," and may easily take a "place" in any company. My experience shows me that the defamers of *Bonasa umbellus* are usually those persons who have been pitted against the crafty fellows and been found wanting.

Quail suit this sort of person, for his dog may point them under his feet, and the shooting is usually in an open field, excepting perhaps an occasional bunch of brush. Indeed I have heard men tell of having killed their dozen or more straight who failed to average one-sixth of their shots on grouse.

For a diametrically opposite picture you may have the heavy scrub oak and other dense brush of a hillside of nearly or quite a 45° slope, or the bottom land along a creek lined equally as thick with alder and other brush, where, in either case, a 25-yards unobstructed view is something unusual; your steady, cautious old dog within, easy range, is earnestly working over the ground as though stepping on eggs, and slowly unraveling the trail. Fancy him now on belly dragging himself over a rotten log, and coming to a halt, for his experienced nose warns him that he may not go further with safety. Now he moves carefully on again, and the uneasy bird flushes with a startled boom, perhaps from an old stump or log, and anywhere from ten yards distant to away beyond range, and disappears like a flash in the very densest of the cover. The throwing up of the gun, the glance over the rib, and pressing of the trigger are simultaneous, yet deliberate; and with the report comes a shower of twigs and leaves as the charge follows closely in his wake, leaving the result in momentary doubt. Or, quite likely, he places a tree in your line of sight so quickly that it receives the entire charge; or, if it be but a sapling, your blood may tingle with gratification at the cutting down of both tree and bird together.

Such is the hunting of the grouse, and as the dog brings to hand the result of your successful shot, you feel that you have earned your victory, and you appreciate him accordingly.

There are, of course, many other phases of ruffed grouse shooting, which, if pictured here, might smack of a sameness, but let me assure the "savvy reader" (as Mark Twain says) that there is no monotony in the experience.

Heavy successive frosts came early the present season, and already—Oct. 15—the trees have dropped their foliage, which is anticipating matters by some two or three weeks. Upon reviewing I find that autumn leaves and grouse shooting are somewhat mixed. Since my boyhood fall tints have ever been, in my mind, associated with dog and gun, hence an occasional ranning from one to the other, for which I am sorry, which I have followed these notes thus far, an apology is offered by

BELL MUZZLE.

McKean Co., Oct. 1880.

## GAME REGIONS IN MAINE.

TO those who desire sport with rod and gun, and have but limited means at command, I would recommend Redington, Washington County, twenty-five miles from the sea-board. The northern settlement consists of four families, farmers on a small scale, who work in the woods winters, and most of them hunters withal. There is no party game kept as such, yet any family would entertain a small party at low rates. For trout, Mopang lake and stream, five miles beyond. Small and medium-sized fish abound, with good casting in mid-stream and banks. The upper and largest lake, reached by a good trail, contains large trout, but it is said they do not bite. It is not known if they have ever been tempted with the fly. There are no boats. During September and October partridge are abundant, and easily obtained. Take the highway, or any of the many tote roads that cross the country, and after dark, but before the dawn, without stirring out of the trail. Later along, after snow-fall, the deer shooting cannot be surpassed in any section east of Michigan. A few minutes' walk from the house brings the hunter to a perfect network of deer paths. L. C. Brigham, an expert still hunter, will entertain small parties with substantial well-cooked food, pleasant room and luxurious bed at the ridiculously low price of \$3 per week, and if his services are required to pilot around to shoot or fish, his wages would be \$1.25 per day, "finding" himself. If his team is called into requisition, a correspondingly low tariff. Of course, this will not apply to deer hunting, as at that season he makes his harvest for family support. To reach there, take cars for Portland, thence steamer to Millbridge—fare, \$6. Daily stage to Cherryfield, five miles, fifty cents, where livery is kept by McCordrick, who will take you the twenty miles to Brigham's at fair rate. Or if the party consists of but one or two, Brigham would meet by appointment with his own team. Mail facilities from Cherryfield weekly. Wagon up and return same day. If parties wish to camp there are plenty of nice logging camps which Brigham will take them to, and all supplies (minus drinkables) can be cheaply obtained at Cherryfield. The country is heavily timbered and hilly. Nearest settlement west, six miles; east, fourteen miles.

CORP. LOT WARFIELD.

Moose River is seventy-five miles north from Skowhegan, Maine. A good stage from Skowhegan to Moose River, and any one can go anywhere on Moose River in a canoe. This would be a good place for "Lower Buck" and party. The *Journal*, of Lewiston, gives this report of a party who have been there: "Two weeks ago last Thursday Messrs. L. D. Mariner and W. H. Johnson, of this city, started on a hunting expedition to Moose River. They arrived home to-day, bringing their spoils with them. They had splendid luck, and their account of their adventures is enough to enthrall any lover of sport. They shot three beavers, three muskrats, one sable, one fox and an army of muskrats, and brought home the skins. They also brought down about seventy

partridges. Among their trophies is a section of poplar tree, ten inches in diameter, cut off by beavers. They camped where the beavers had worn a track up a mountain, beaten as hard as a cattle track. The gentlemen depended chiefly on the dogs for their supply of food, and roughed it after the most approved hunters' fashion, spending their evenings in watching the beavers build their dams by moonlight." E. M. G.

## THE MAINE GAME LAWS.

BANGOR, ME., NOV. 1.

Editor *Forest and Stream*:

We call the attention of all proposing to visit the woods of Maine for sporting purposes, to the fact that no one is allowed to be killed from the 1st day of October to the 1st day of May following. *But citizens of the State* are permitted to kill and take to their own houses for their own use, but not to sell or market, from the 1st day of February to the 1st day of May.

Trout, Togue, and Land-Locked Salmon.

Annual close time from October 1 to May 1 following, excepting on the Croix River and tributaries, and all the waters in Kennebec County, in which close time is from September 15 to May 1 following, penalty thirty dollars. "Provided, however, that during the months of February, March and April, in each year, it shall be lawful for citizens of this State to fish for, and take the land-locked salmon, trout and togue, and convey the same to their homes, but not otherwise."

No person shall sell expose for sale, or have in possession with intent to sell, or transport from place to place in this State, any land-locked salmon, trout or togue, between October 1 and May 1 following, under penalty of fifty dollars for each offence.

And any person or persons having in possession, except alive, any of these fish between October 1 and May 1 following, or who shall transport them from place to place within this State, shall be deemed to have killed, caught or transported the same contrary to law, and be liable to the penalties aforesaid. Chapter 123, 1879.

Moose, deer and caribou are forbidden to be killed or taken in any manner from the 1st day of January to the 1st day of October following. We append the law, as also in relation to our ruffed grouse, or partridge as commonly called:

Moose.

Sec. 3. No person shall, after the first day of October in the year of our Lord eighteen hundred and eighty, hunt, kill or destroy, with dogs, any moose within this State, under a penalty of one hundred dollars for every moose so killed or destroyed; and no person shall, after the first day of October aforesaid, between the first day of January and the first day of October, in each year, in any manner hunt, kill or destroy any moose under the same penalty as above provided.

Caribou and Deer.

Sec. 4. No person shall hunt, kill or destroy, with dogs, any deer or caribou within this State, under a penalty of forty dollars for every such deer or caribou so killed or destroyed; and no person shall, between the first day of January and the first day of October, in any manner hunt, kill or destroy any deer or caribou, under the same penalty as above provided. Any person may lawfully kill any dog found hunting moose, deer or caribou.

Partridges for Possession.

Sec. 5. If any person has in his possession the carcass or hide, or any part thereof, of any deer or caribou, or any part thereof, of any animal, during the period of time in which the killing of such animal is prohibited, under a penalty of forty dollars. Chap. 50, 1878.

Ruffed Grouse and Woodcock.

No person shall kill, or have in possession, except alive, any ruffed grouse, commonly called partridge, or woodcock, between the first day of December and the first day of September following, under a penalty of not less than five nor more than ten dollars for each bird so killed, or had in possession, or exposed for sale. Sec. 12, Chap. 126, 1879.

We wish it to be distinctly and clearly understood that we shall rigidly enforce to the utmost extent of our power and resources these laws against all parties, whether guides or principals, who shall be guilty of their infraction.

E. M. STILLEWELL.

Commissioner of Fisheries and Game.

## WILD RICE.

I AM prompted to say a word for the benefit of my brother sportsmen on the cultivation of wild rice. I have lived where it grew for the last thirty-four years and I know something about it. There seems to be a desire among sportsmen to introduce this most attractive water-fowl food where it is not found, and to grow it in Plover and Stream seem to be the men who lead those who are getting seed to plant to failure.

Some time ago the *FOREST AND STREAM* recommended planting in six feet of water. I have never seen a spear reach the top and head out at that depth. We have here two distinct varieties. One will head out at three feet deep—a spindling head with little seed. This variety always grows along the margin of rivers and on small sand bars or sand deposits in two to three feet of water. The other variety, or large species, grows from four to six feet deep. The largest growth in shallow water from one foot to one inch (general average during summer), and a part the summer no water stands around it, except rain falls and rise of streams therefrom. I have seen stalks six to eight feet tall in marshes that are mowed every year. I will guarantee that this variety will not reach the surface water and head out planted in six feet depth. There are thousands of spears seen along our rivers here that die and decay in four and five feet before the main stock reaches the surface.

Frost gives a very correct account, except the depth to plant and the time of sowing. The last two years I have taken pains to dig the mud in our marsh as soon as the ice was out to ascertain how soon it sprouted in the spring and found it sprouted, and some quite a half an inch long, according to its depth in the mud. This was March 20 to 25. By the first of May it covers the bottom an inch out of the mud. Then bluebills, red-head and other ducks feed on it, so the water is winnowed with fine fillets of it. The growth is slow till it reaches the surface; then one or two leaves sprout and float on the surface, as though no head was to appear, for a long time, and, as if by magic, rise up "to explain," then grow very rapidly till in blossom. It seeds quickly (1st to middle of Sept.), and falls while soft and green into the water, if standing in it. There is much of it at this time of year with no water around it. It whips off easily the first strong winds.

There is something about it I propose to still further investigate. Ten years ago in our marsh there were for years hundreds of acres of open bays where no rice grew. One or two times it came up, but it came so thick that you could not get through with a duck skiff. It grew rank and strong for

about five seasons. This season there is scarcely a spear where the last five years there were hundreds of acres, and this year only water.

Will some one tell if seed thoroughly dried will grow? It is very soft when it self sows. Let those who plant it remember the strongest plants I ever saw were grown in less than a foot of water.

St. Joseph, Mich., Oct. 18.

#### IN THE CANADA WOODS.

LAST Friday F. Miner, M. D., of Honolulu, S. I., and myself, with two guides, took possession of this most pleasant camp with the consent of the owner, Mr. L. Pope Robinson, Que. It is a well-built log-house, with stove and moderate amount of furniture in it, and pleasantly situated in a small clearing on the rising ground west and within a short distance of the "Meganic Dog," which lies along the western base of Meganic Mountain. The camp fronts and gives us a fine view of the various peaks and basin in the mountain and surrounding wilderness. We have already bagged quite a number of ruffed grouse and ducks, and have seen numerous signs of deer and moose, together with most of the fur bearing animals that frequent this part of the globe.

Ever since I came here met one of the readers of *FOREST AND STREAM*, M. L. P. Keener, of New Hampshire, is trapping in this vicinity. He reports good success so far, and will remain here until the fog freezes up.

Duck shooting on the St. Lawrence and on Missisquoi Bay, on Lake Champlain, has been good, and is likely to continue so for some weeks yet. My friend, Mr. Henry Casseau, of Vermont, is having fine sport among the black bass at Bass Lake, Franklin, Vt. He has captured some six-pounders, and they were the smallest I ever saw.

Some two weeks ago Mr. A. F. Dunlop, of Montreal, and myself were duck shooting at the Back River, near St. Rose, when two Montreal amateurs tried to "corner" our wooden decoys, mistaking them for live ducks. One of the cockneys walked boldly down the shore with gun held at an angle of forty-five degrees, while the other went around the decoys in the boat, so as to drive them up to his companion. When he had rowed within about thirty feet of them he began to splash the water with one oar, and cry out "Shoo-ah! shoo-ah!" We then showed ourselves outside the blind, which caused the fellow with the gun to take to his heels; but the cockney in the boat was so paralyzed with amazement that the only reply he could make to our "chaff" was "Aw-oh-aw," as he drifted down the current out of hearing. He, however, recovered his wits and rowed back up stream, picked up his friend, and rowed for the village, where we again saw them that evening talking very loud about rowing with Mr. and Mrs. Hanlan's probabilities of success in his match with Trickett.

Pope's Camp, Scotland, Que., Oct. 21, 1890.

#### TEXAS NOTES.

FROM the time water fowl leave, until their return in the fall, we have no shooting of consequence except at the few chickens that breed on the low prairies bordering the gulf and later at migratory plover. Quail are now getting plenty on the mainland where there is suitable cover.

During the few cool days last week the market hunters brought in quite a lot of ducks, mostly teal, but in a few weeks very vast flocks can be seen in almost any section. Jacksnipe have been plenty for several weeks, and later may be found in every wet, marshy place in abundance. They remain until April and afford fine sport.

Your remarks last week about dog sellers and buyers were amusing. I have had a little experience in that direction. The two most prominent cases were in buying a setter bitch "in whelp" that had not been served at all, at least the owner of the dog averred that he knew nothing of it. At another time I purchased a pointer bitch "broken by a professional." After satisfying myself that she had no breaking, wrote said professional, who denied having broken her.

The sportsmen here are much in need of a light draft boat with side wheels, propelled by steam, to reach the best points in our shallow bays, and to return speedily and with certainty. You referred to such a boat not long since as being built for such a purpose, and if you will tell me about it you will confer a special favor on the sportsmen of this city. One carrying say fifteen men, and drawing not more than two feet of water would be just the thing. About what would such a craft cost, and what would the expenses of running her per day probably be?

The annual meeting and tournament of the Texas State Sportsmen's Association will take place here in May next and we hope to make it an attractive one.

CARONKAWAY.

SABBATH MARAUDERS AGAIN.—Sunday shooters get their deserts in Westchester County. Four persons were arrested last week on the complaint of Geo. Laick, the wide-awake game constable, for shooting on the Sunday previous. They were taken before Justice Bird, who fined them \$5 each and costs. They were all from Jersey City, and this was not their first offense. Officer Laick has received praise from the local press for his faithful discharge of the duties of his office.

Relative to the above, we have received the following particulars from Mr. Saick, which we publish with pleasure both because the action was highly creditable to the game constable and because the result is a salutary warning to others:

For the last year or two past a party of four and sometimes five have made it a practice to come up here from Jersey City with their dogs and guns, on Saturday nights, to go out shooting on Sunday. They used to go about three miles back of Tarrytown to a friend and stay there over night. As I thought they would come this fall as usual I kept a sharp lookout for them every Saturday night, and on Saturday, October 16, they came up and went back in the country in their friend's wagon who was in waiting for them. Early on Sunday morning I took a horse and wagon and started for the country. I found they would hunt, and had a good opportunity to see four of them in the field with their dogs and guns, and when they came to the Tarrytown depot, on Monday morning, they were duly arrested and taken before Justice Bird, who fined them five dollars each and costs. After they paid the fine the Justice told them that the next time they should learn the law first, and one of them said, "We know the law, but we thought we were all right as long as we

were in a country place." But although, in my opinion, the fine was not large enough, I think they have learned to their sorrow that they must not come to Tarrytown to violate the game laws, and I don't think they will come again. This is the first time that any one has been arrested and paid a fine for violating the game laws in this part of the country since I lived here, which is fourteen years.

GEORGE LAICK, Game Constable.

CANADA.—"E. S. M." of Winchendon, Mass., gives to the *Courier*, of that town, the following facts regarding Buckingham, a sporting resort in Northwestern Quebec:

To get to Buckingham the quickest and best route is via Montreal and the O. N. & Q. R. R., leaving Boston at 8 o'clock A. M., and arriving at Buckingham at 12 noon, at 12:30 noon. At Buckingham, go to the Montreal House kept by J. W. Lynch, who will give you all necessary information and assistance, will take you to the lakes, provide camps, boats, provisions, cooks and guides at very reasonable terms. The ride from Lynch's out to camp is through various scenery and over a very comfortable road of about twenty-four miles, then by boat about a mile, then by portage nearly a mile and a half to the last mile and a half to the camp. From the camp there are five or six miles in all about ten miles long, where you can find the red spotted trout, the gray trout, and the black trout, and occasionally one will find them all together, and weighing from half a pound up—to where even a fisherman dare not give the weight. Mr. Lynch told me that one was caught at Big Lake last fall weighing twenty-one and a half pounds. These, however, are of exceptional size, often seen or caught, but of this kind that are always to be had, but trout of from one to four or five pounds are plenty, and any one can have plenty of sport and without going far from camp. The camp is well kept by Terrence McCabe, and Angus Pierson, his camp helper, is a good and faithful guide. Trout Lake No. 1, is about five minutes' walk back of the camp on another little stream, and Lakes No. 2 and 3 are above No. 1 on the same stream. Ducks and partridges are plenty in their season. A few deer are in the woods about the lakes, but moose and caribou have been driven from twenty to fifty miles farther north. The lakes above mentioned are not all the ones that are accessible to the tourists; within a mile or two of the above are Gull Lake, Hawk Lake, Lady Lake, and some forty others within a radius of ten miles, and all full of trout. The scenery is beautiful and grand. Altogether it will pay the sportsman for the trip."

OHIO NOTES.—*Toledo*, O., Nov. 24.—I enclose slip from paper: "Yesterday's Cleveland Leader says: Captain Louis Smithing returned yesterday from a three days' shoot at the Ottawa Point Club House, of which he is the founder. He brought back with him 146 ducks of the most magnificent specimens that ever cut the air. Seventy-one of these ducks were shot in four hours during the heavy storm of Friday. The 146 are now distributed among friends, and are on their way to that grateful sequel, which the true epicurean is always ready to offer to delicious wild fowl."

The duck shooting is very good on all the different club marshes near here. The clubs are having some trouble with trespassers who seem to think all marsh land belongs to Uncle Sam, and that they can just shoot all they wish; but there have been several arrests made lately, and are to come to trial, which will, undoubtedly, settle the trouble. Every day or two I have complaints that people are shooting quail or ducks out of season. There is no one who seems to take my particular interest in stopping this unjust breaking of the law. Our Ohio Legislature should look out and make provision for the protection of game, or in a few years we will have none. Cannot something be done? The great trouble seems to be that members of Congress, etc., are asked if they will enforce the game laws and protect clubs, and if they say yes there is capital made out of it, and they lose votes by it. So it goes with the game.

A. C.

WASHINGTON TERRITORY NOTES.—(Extract from Circular 55, received by Prof. Spencer F. Baird, from A. J. Smith, P. M., Quillett, Quillett Co., Washington Territory).—If the Indians could depend on a steady market to buy their fish, furs and hides, they might become a useful people. The plain Indians are often hungry as a wolf, and often assuage. The coast Indians have plenty to eat and are quite docile. The ocean abounds with fish, clams, mussels and other shellfish, seal, sea otter. The land with elk, beaver, bear, panther, wildcat, and other mammals, with geese and ducks. Our forest forty to fifty miles inland is covered with small prairies of from one to ten plains of 160 acres. Numerous streams, with waterfalls from five to sixty feet. The timber is fir, spruce, cedar and hemlock from one to ten feet in diameter, and from 50 to 300 feet high. Gold is found in our streams, but as yet it has not been taken out in paying quantities. Coal has been found in several places. This almost unknown region abounds in untold wealth of agricultural, minerals, timber and fish. Our population is 43. There is room and wealth for several thousands. We need U. S. Postal Service put on our route to develop the country, and a railroad which is sure to come. Our coldest weather was in December—20 degrees above zero. Our deepest snow was in January last—20 inches deep, and it lay one week. Snow in February, 12 inches deep, lay one week, the hardest winter for 20 years. Our mountain streams do not freeze over in the winter; fish can be caught all winter. Mt. Olympia is covered with snow the year round.

GAME ABOUT ROCHESTER.—*Rochester*, N. Y., Oct. 25.—We have had, and are still enjoying a very favorable season for field sports. In some of my former letters I told your readers what superior woodcock shooting may be had in this vicinity at times. This has been one of the favorable seasons and the number of those favorite birds that have been shot in the country adjoining this city within the last month almost exceeds belief.

There is one market shooter living in the town of Greece, next north of the city, and he has shot enough woodcock this month to make happy forever half a dozen men who shoot for sport. Early in October he shot thirty-two cocks in one day, and in a day and a half last week he bagged forty-two woodcock. The unusual number of the birds is accounted for by the fact that the great storm in the west and north probably drove the migratory birds from their haunts in the west and north, and they fledged in the place in the places of New York. Just before the last flight there was a foot of snow over the State from Batavia, thirty miles west of here, to Buffalo and through Canada. The woods where the cocks are found so abundant are close to the lake, and when the birds cross Lake Ontario they are probably tired and stop in the first shelter. There have been more golden

plover with us this season than for many years past. I heard this afternoon that on Friday afternoon last a Rochester man shot thirty-five Wilson snipe on the Montezuma marshes, and that he could have shot a hundred next day if the weather had not turned unfavorable.

Three of us went to Canes Lake, Livingston County, last week, and as the result of one day's duck shooting brought to bag thirty-one ducks. The day was not favorable, and other circumstances intervened to prevent our doing as well as might have been. One of our party, G. D. B., made a pretty double shot at a pair of redheads, knocking down one with each barrel. They were so big that at first they were taken for curlew backs, but their yellow iris betrayed them. We tried diving decoys, and it was amusing to see how we could toll ducks with the diver. On one occasion, just for trial, we led a blue bill directly past our flock of common stools by working the diver, which seemed to excite the curiosity of the living bird to an extraordinary degree.

R.

LAKE OKKECHOKE.—In an item headed "Lake Okkechoke," the correspondent says that it is no unusual thing to see 30 or 75 deer in a day's ride. This seems to me drawing it rather high. There have been in the past of Florida, now look for 30 or 75 deer in the State, who was said to know every square foot of land in Florida, and don't believe I ever saw more than 25 deer in one day, and then 18 out of the 25 were at a spring for water. There is plenty of game in Florida, so I see no reason for stretching things so. In speaking of the cruelty of shooting from the deck of a steamboat I would certainly take your view of it, providing the parties do not hit anything when they fire. On one trip up the St. John's river from Jacksonville to Melville, there were four gentlemen on board who fired at least ten shots apiece at an alligator lying perfectly still on the top of the water, and never even made him wink. So it is with most of them, as the good hunters prefer sport that gives them some exercise. I was in Florida from January 1876 to the middle of April the same year, and again from September 1876 to June 1877, so that I have some idea of how much game can be found.

G. W. B.

VISITING SPORTSMEN AND DUCKS.—*Windom, Minn., Oct. 23*.—Editor *Forest and Stream*: I have just read what "Fairmont Sportsman" says in reply to my criticism upon "Wausee's" recent letter in the *FOREST AND STREAM* about the dog poisoning here. I certainly intended no injustice to "Wausee." But his letter contained the sentiments and expressions of the foreign sportsmen to such an extent that our sportsmen all took it for granted that he was one of their kind. I have been in the State for some time, and I have not only did an injustice to our sportsmen but to the community in general, and I see no reason to modify anything in my former letter. If "Wausee" was attempting anything in good faith it was from *ex parte* testimony, evincing a disposition to throw discredit upon people of whom he knew absolutely nothing. My attempt to "connect Wausee's personal character with the merits of the case" was wholly upon the assumption that the case was one of pothunters who had been making the unsportsmanlike use of our club lands.

In reply to your editorial comment as to "whether or not we can take our valuable dogs with safety to Windom, Minn., I will say yes with the utmost safety, and their owners will be warmly welcomed also if the outrages upon the country are not repeated.

The duck and grouse season is now at its best. I have never known the aquatic game so plenty. Saturday I saw a large flock of mallards, and a single shot of a mallard, with my companion, lying on my back in the adjacent water, and I shot several as they passed over, and for hours they were flying over the field like great swarms of ducks. Geese of every variety are plenty, and the ducks are without number. The storm of the 16th drove the coots mostly south though a few yet remain. They have been extremely and unusually plenty this fall.

WINDOM POST-HURST.

WEIGHT OF RUFFED GROUSE.—*Elmira, N. Y., Oct. 25*.—Seeing the note on "The Weight of Ruffed Grouse," by J. H. M., in your issue of the 21st inst. and the invitation from you to others to give their experience, I send you the result of my observations. I have before me my game account for 1879 and to this time in 1880, in which I have the weights of twenty-three ruffed grouse, the heaviest one showing twenty-five and three-quarter ounces, an old cockbird shot in November in the middle of December, '79, the weights of which were from nineteen and a half to twenty-five ounces. Then I have the weights of six shot just before Christmas, '79. The three male birds weighed from twenty-three and a half to twenty-four ounces, and the females from nineteen to nineteen and a half ounces. From the above it will be seen that as far as my experience goes our birds will weigh from nineteen to twenty-five and three-quarter ounces. I also draw the conclusion that the female birds in this section of the State will weigh from nineteen to twenty-one ounces, and the males from twenty-two to twenty-six ounces; although I have not secured any that would turn the scales at twenty-six ounces. I weigh my birds in the same kind of scales used by the post-office department. We have here what we call "old gray backs," the back and tail being gray instead of brown. We do not get more than one in ten of this color, and I am at a loss to account for the difference in coloring and size. The old birds come from others of longer and larger experience in regard to the matter. Can you account for the heavier weights of the birds mentioned by "J. H. M."? Do they grow larger in that section of the State, or has my limited experience failed to bring any of the "old ones" to bag? As you suggest, let the sportsmen give us the first of their experience, as it is of much interest to us all.

E. B. G.

CONSERVATION.—The *New Haven Register* gives a good report of woodcock shooting and sportsmen of that city. "Yesterday was a good day for sportsmen. The birds were moving in large numbers, the air being cold and the morning frosty. New Haven sportsmen were on hand to take advantage of the conditions. They went up the Canal road to favorite preserves, to Woodbridge and elsewhere. The result shows that the anticipated diminution of woodcock has, fortunately, not come to pass. More birds will be shot this month than during the remainder of the season. William Peck, at Woodbridge, Robertson bagged twenty-four woodcock; the Potter boys twenty birds; Henry and David Cowell bagged woodcock and six partridges, and several others seven, eight or nine birds each, mostly woodcock. Mr. Peck has a valuable dog which yesterday did something rarely witnessed. It had just recovered a dead bird from the cover when he pointed at another with the dead bird still in its mouth. At

for argument's sake an erroneous award in this case we consider the precedent of changing a decision a very bad one. In this case it was particularly unfortunate, for it was the first decision of the meeting that had been openly announced to the whole field. We consider re-judging should be discouraged by all those who do not wish to see our trials and shows turned into beer gardens simply because Mr. Smith or Mr. Robinson thinks he has been aggrieved. Up to this time there never was a set of judges in America who had shown themselves more competent to judge or had greater confidence from every one present. Next morning the brace and handlers were on the ground, but as we state further on the rain prevented the running of the trials on Thursday Mr. Seiler came on to Manheim from Harrisburg, and in the afternoon was obliged to return home, and his son decided to go with him and take the dog. Just before entering the cars Mr. Seiler was informed that the judges had again reversed their decision, and that his dog had been awarded the heat, and Mr. Hendricks was told that King Dash would be permitted to run for second and the money. These are the simple facts of the case as they occurred, and as the committee of the trial had determined not to make public the score of points which we consider should have been done, we refrain from criticising it as it was not landed to us officially. In conclusion we will say, that though it is a matter of great regret that anything should have occurred to mar the pleasure of the meeting, yet it is no surprise to us that errors should occur as long as our Field Trial rules remained couched in the language in which they are presented. We cannot do better, therefore, than quote from our editorial remarks in *FOREST AND STREAM* of September 2. Had our words of warning been heeded this occurrence would never have happened.

No laws for competitors of this kind can be too fully or plainly expressed. They should be explicit and admit of but one construction. The success of every enterprise depends upon the straightforwardness and intelligence by which it is run. Indecent rules, framed carelessly, even by inadvertence, are liable to be twisted by interested parties, and may mean the very opposite of what is intended. Discussion and cavil rob all true sport of its pleasures, and disgust all men of gentlemanly instincts. Whenever competitions of any kind take place there have been since the world began men who cannot take a beating in a manly way. They are not gentlemen, and they should be treated as such. It should be clearly given, and it will cause the gentlemen who accept the onerous office much trouble if they are not.

Of course there are objections to framing rules for running dogs mechanically, but we believe all the field trials which we have seen can be made more explicit. Field Trials are as yet but young in this country, and there are always present more or less persons for the first time whose interest can be secured by placing the matter before them in a simple way, which they can understand. As they now stand it would take a Philadelphia lawyer to interpret them, and he might find himself sorely tried.

To resume, Mr. McConnell's Lady Laverack and Mr. Isaac Yearley's Little Lady were called, and as the former did not respond, Doctor, belonging to G. B. McLane, Pittsburg, Pa., handled by Wm. Seager and Biddle by T. W. Ferrisburgh, were shipped. Across the glade Doctor went like a flash, showing himself a merry going dog of good speed. He soon brought up standing on a cat, and Biddle ran in from across the meadow refusing to back. Both dogs were under good command, but Doctor had his own way from the start, showing a good notion how to quarter his ground. In a little spongy gully in a cornfield Doctor straightened himself out, and after drawing a few steps on, pointed in excellent style. The birds were flushed by the gun, and two were killed by one discharge. Owing to the fault of his handler, who should have signaled him, Doctor broke shot and retrieved one bird, and the other fairly at command. Doctor, further on in a springy glade, made a false point, but went on. He then ran down wind in a rag grass field, flushed one bird, and in quartering back came to a point on the bevy as it jumped. In the same field Doctor roared and pointed where birds had been running, Biddle moved up and shared the point, refusing to back. Doctor then flushed. Biddle then nessed a bird up which she should have pointed, and the bevy went to the rail. It had now grown quite dark, and a move was made to the railway station, and 8:30 p. m. saw the party back at the Stevens House at Lancaster.

#### THURSDAY, OCTOBER 28.

Although rain was falling quite heavily, an early start was made at 7:00 A. M. for Manheim, where we were to meet. The party returned to Lancaster by the P. & M. train, and the afternoon was devoted to visiting Mr. C. Z. Miley's large kennel of dogs and a call upon Mr. Yondersmith, whom we found away from home. On our way back to the hotel we were met by Mr. F. A. Diffenderfer, who invited us to look at his kennel. There we found his two first-class bitches, Leah, Roybell-Livy II., and Arnolda, Leicester-Pocolontas, and two very likely puppies by Roscoe out of Arnolda.

#### FRIDAY, OCTOBER 29.

In spite of a dripping morning, with the whole country shrouded in a fog, the 7:50 A. M. train was taken for Manheim station. The start was as cheerless as one as it is possible to conceive, the judges and the majority of spectators had declined their rubber coats, and the dogs had a lissid look except when shaking the water from their coats. The ground being reached, the same where the running ended on Wednesday evening, it was found that Diffenderfer's Leah and McConnell's Lady Laverack had been withdrawn, and that Shuster's Cornelia had failed to put in an appearance. This brought Stayton's Belton III., and Yearley's Little Lady together, May Laverack having the bye. Belton was handled by H. M. Short, and Little Lady by her owner. The dogs were slipped at ten o'clock in the rag-weed field above the glade. Both dogs were off like a flash, the little bitch being a stylish and rapid dog, and Belton settling at once to his work. At the lower end of the field Belton pointed a good sized bevy, which flushed as the gun came up, not lying well on the cold and wet limestone chippings. The bevy dropped apparently in the bottom. On the other side of the bottom, in some woods, Belton, who was under good command, pointed in some long grass and stood very staunchly in an awkward position. Lady was called up to back, and Belton settled down on his point. Lady refused to back, and passed between Belton and the bird, and circled round him. The gun was ordered to flush and kill. Belton did not drop promptly to shot, but retrieved the bird in style and was awarded the heat.

Mr. Brown's Dash, winner of first heat in the stakes, and Mr. Snellenburg's May Laverack, who had a bye, were then run together, both dogs being unavoidably handled by H. M. Short. The dogs were given a spin in the bottom, and then ordered back into the woods, which was drawn blank. May

showed up at once as a very speedy bitch, but Dash seemed slow. He began by flushing a bird in the bottom, and dropped well to wing. The dogs were sent into some thick alders along a little stream, where the bird had been marked, and where it was impossible to see the dogs at work. The bird was flushed presumably by Dash. It was marked down in a corn lot, but both dogs failed to make it out. The bird was then trodden upon by a spectator, and May pointed where it had been moved. Dash pointed the bird in the alders under a mass of drift stuff, and when the gun came up, jumped in and caught it. The glade was followed up into a ravine, and many birds of grass and rag-weed were drawn blank. The party then adjourned to a barn and partook of an excellent luncheon; which had been sent on by mine host, Mr. A. Hiestand, of the Stevens House. On resuming, Dash made an uncertain point in the first field of the morning, and May went in and flushed. It was a bad day to work any dog. There was but little air stirring, and that from the east; everything reeked with dampness. After the dogs had been down over three hours, the judges, who had been working unflinchingly for a result, asked the representative of the owner of Dash and Mr. Snellenburg if they would be content with a decision as the score stood at that time. It was agreed to, and May was awarded the heat. It may be said that Short handled both dogs with great fairness, and the owners cannot be otherwise than satisfied with the decision.

The next brace run was Snellenburg's Thunder, handled by his owner, and McLane's Doctor, handled by Wm. Seager. Thunder showed the same good ranging and quartering qualities as on the first day. He is an excellent dog, and we believe the first pure Laverack ever run in an American field trial. After a vast range of ground had been drawn blank, a meeting was called on the ground of members of the association and contestants. Mr. Stayton, secretary of the P. S. F. Assoc'n, offered a resolution, as follows: "That on account of the scarcity of birds, the unpromising weather and the closing hours of the last day of the trials, it being impossible to run them off, the first prize of \$100 in the All-aged Stakes should be equally divided among those dogs running in the stakes." The motion was seconded by Mr. Diffenderfer, and then put to a vote, which was carried unanimously, the following gentlemen voting in the affirmative: Messrs. Snellenburg, Stayton, Yearley, Seager, Hendricks, Diffenderfer, Farrington and McConnell.

Division of First Prize, \$20 each—Thunder, Button, May Laverack, Doctor and Belton.

Division of Second and Third Prizes, \$10.71 each—Pat II., Biddle, Brown's Dash, Countess, Roxey, Little Lady and King Dash.

Withdrawals—Lady Laverack, Leah and Seiler's Dash. Absent—Cornelia and Minerva.

Upon returning to Lancaster a meeting was held, and it was decided by the committee to pool the prizes in each of the Puppy and Nursery Stakes, and the divisions were made as follows: Puppy Stakes, \$9 each—Bess, Little Lady, Mack, Dick Laverack, Daisy Laverack, May Laverack, Count, Lady Laverack, Roxey Boy and Abby W. Absent—Dart, Bob and Ned. Nursery Stakes, \$22.50—Dolly Edwin, Stuart, Pat Laverack and Peter Laverack. It was also decided to tender to the gentlemen of the association the return of their entrance fee of \$10, and to offer the return of the donation prizes to Messrs. James E. Caldwell & Co., of Philadelphia, and Mr. T. G. Conway, of New York.

The party then met at supper for the last time, and the evening trains going both East and West carried the judges, contestants and visitors to their respective homes.

We desire to return thanks to the local press of Lancaster for many courtesies extended to us during our stay in that city.

#### PENNSYLVANIA STATE FIELD TRIALS ASSOCIATION.

THE annual meeting of this organization was held on Tuesday, October 26, at 8:30 P. M., the evening of the first day of the trials, at the Stevens House, Lancaster, Pa. J. Palmer O'Neil, President, in the chair. The minutes of the previous meeting were read and adopted, the Secretary's report read and that of the Treasurer, which showed a balance on hand of \$442.45 obtained from membership dues, entrance fees and donations. The President then rose and stated that as the *FOREST AND STREAM* had written the organization to know the reason why the National American Kennel Club's Field Trials rules had been somewhat altered by the Pennsylvania Association, he deemed an explanation at that time but as he had taken the matter up during the trials, he was unable to give it. He then read the following rules, because the National Trials were run in the West on large prairies, where pace and ranging were of more importance than on the inclosed farm lands of Pennsylvania. He had, therefore, taken five from pace and one from ranging, and added two points each to staunchness, quartering and obedience and disposition. Slight changes had also been made in the negative points for demerits which were found to be expedient.

The meeting then proceeded to the election of officers with the following result: President, J. Palmer O'Neil, Pittsburg, Pa. (re-elected); First Vice-President, Samuel G. Dixon, Phila. (re-elected); Second Vice-President, Samuel S. Brown, Pittsburg, Pa.; Treasurer, Frank A. Diffenderfer, Lancaster, Pa. (re-elected); Secretary, I. R. Stayton, 67 Fourth Avenue, Pittsburg, Pa. (re-elected). Executive Committee—B. F. Dorrance, Wilkesbarre, Pa.; William A. McIntosh, Pittsburg, Pa.; S. S. D. Thompson, Pittsburg, Pa.; Edward Gregg, Pittsburg, Pa. (all re-elected); Richard G. Wood, McKeesport, Pa., and Dr. Robert Hensley, Phila.

The following gentlemen were then elected members of the Association: J. W. Orth, Pittsburg, Pa.; James O. H. Denny, Ligonier, Pa.; William James McCrickart, Edgewood, Pa.; R. J. Wood, McKeesport, Pa.; B. J. McClure, Lancaster, Pa.; J. B. McCasby, Lancaster, Pa.; W. B. Hall, Lancaster, Pa.; T. S. Thompson, Thompsonstown, Pa., and Dr. S. T. Davis, Lancaster, Pa. It was then voted that the three judges, Major J. M. Taylor, B. F. Wilson and Washington A. Coster, Dr. R. Rowe and F. Satterthwaite, of the *FOREST AND STREAM*, be made honorary members.

Mr. Diffenderfer then expressed his regret at the scarcity of birds, which had been such a drawback to the day's sport. He had been promised by a man of influence residing at Quarryville, who was a brother member with himself of the Lancaster County Game Protective Association, that the grounds should be strictly preserved for the trials, but that he had learned from two sources of information that the party had broken faith with him, and that the birds had been shot

at since the opening of the season. Alderman A. K. Spurr, President of the County Association, corroborated this statement, and said that he felt surprised that the man referred to had not only allowed his friends to shoot over the grounds but had done so himself, that Mr. Diffenderfer had drawn the grounds before the open season, and had found birds in large numbers on the beat, and that he was promised they should be left unmolested. A change of base was then decided upon and the burrough of Manheim, ten miles north of Lancaster, was selected as the locality in which to continue the trials.

While the meeting was in progress the Pennsylvania Association received a telegram from W. A. Dunshee, President of the McKeesport Game Protective Association, offering their preserve of thirty-five hundred acres for next year's trials. The President was authorized to appoint a committee to select the location for next year's trials.

A vote of thanks was tendered to Messrs. James E. Caldwell & Co., of Philadelphia, for their donation of a prize in the shape of a solid silver cup, and to Mr. T. G. Conway, of New York, for the donation of a handsome gold and silver mounted revolver.

After a lively discussion on the practicability of allowing non-residents of the State to contest in the future, on which nothing was done, the meeting adjourned.

#### COCKER SPANIELS.

CHICAGO, Oct. 25.

#### Editor Forest and Stream:

In your last issue appeared an article under the heading of "Modern Cocker Spaniels," from Mr. A. C. Waddell, of Topeka, Kansas. This article was brought out, no doubt, by the very laudable request of G. J. D. McDougall to breeders of this strain of spaniels to give their views of the type of the modern cocker, that some definite standard might be agreed on by which to judge the breed at bench shows in this country. "Stonehenge's" standard, to some whose breed did not correspond with it, not being satisfactory. "Idstone," in his work on the dog, says: "The forms and colors of cockers are all matters of fancy and fashion, but I may caution those who desire to have them that they must not expect a very great amount of work from them unless they are of adequate size." "Stonehenge" says: "The title 'cocker' includes every variety of field spaniel except the Sussex and Clumber." Now to whom are we to refer as to what the modern cocker is or should be? Shall it be to Mr. Waddell or to such well-known authority as "Stonehenge?" For one, knowing how Mr. Waddell's dogs are bred, I should prefer the former.

I beg to correct one statement he makes: "To call such dogs as Whitman's cockers is a farce; they are merely land-some English spaniels. I am opposed to cockers running over twenty-five pounds, and when Mr. Whitman exhibited his at St. Louis—liver and whites that would run near to, if not quite, forty pounds—I said English field spaniels, or, as some call them, English water spaniels."

Now, the first cockers I exhibited at St. Louis, liver and white, were the dog Dick and bitch Dixie—both I considered quite handsome and good. They both won first prize in their respective class, and were neither of them over twenty-five pounds. They were placed first over a very nice pair of the Bestor strain, which were considered larger; still, I think no good judge would call them English water spaniels. At the next show given in St. Louis the standard under which cockers or field spaniels were to be judged was "Stonehenge's," which says: "The title 'cocker' includes every kind of field spaniel except the Sussex and Clumber." Under that standard I entered Carlo, a very nice liver and white dog, under thirty pounds, perfectly made, and a well-broken and remarkably good worker. He won first prize. I also entered a liver and white bitch, heavy with pup, but I do not think she would weigh as she was over thirty-five pounds. Under the standard she should have won second, but the judges, who did not seem to be posted on what a spaniel should be, gave second to Mr. Waddell's liver and tan dog, which, I think, he will not deny is one-half King Charles, and that his sire was owned in Chicago. He says he entered his Josie in the King Charles class, and won the prize—reason, no competition. If he knew she was not a King Charles, why did he enter her in that class? Was he afraid she would not win in the class where she by right belonged? I leave it with you to judge.

With regard to size of cockers owned by me, I will say I have not a bitch that will to-day weigh twenty-five pounds. They are what I consider a trifle under size, and I bred them to Carlo, producing stock that will run from twenty-three to twenty-eight pounds. Their usefulness overbalances all other attainments, so Mr. Waddell tells us, and as mine are not bred as above for parlor pets, I think I have struck the happy medium for usefulness.

J. H. W.

NOTES FROM FORBES EXHIBITIONS.—The Royal Society for the Prevention of Cruelty to Animals, of London, England, October 14, had one James Smith, a dog dealer, arrested for biting off the tails of five King Charles spaniels. Mr. Catral, a member of the College of Veterinary Surgeons, testified to having examined the dogs, and found that inflammation had set in. He looked upon the biting off of the tails as an operation both painful and unnecessary, as part of the spinal marrow would be taken away, and that at the expense of a terrible nervous shock. He further stated that he had never heard that a dog dismembered, and that the act was one of cruelty. The defense set up a plea of general custom, and that the operation was performed on thousands of fox terriers. Alderman Sir Thomas Gabriel, in giving his decision, said that though the charge was one of cruelty, no one could suppose that it was wilful, or that a man would injure his own property, and fined the defendant the nominal fine of one shilling and costs. The editor of the *Field* remarks as follows: "The statement in evidence that 'part of the spinal marrow is taken away' is contrary to fact. The spinal marrow does not extend even to the root of the tail, and it is only the bodies of the vertebrae (without any cavity for the nerves, or neural canal) that enter into the formation of that organ. Still there is no necessity whatever for biting off the end of the tail, seeing that it can be removed in a much more painless way by the knife."

Mr. Macdonald has lost his pointer bitch, Dido, who was doubly valuable to her owner, as she was the only daughter of Garth's Drake in his possession. She, however, leaves behind her three pups, Drummer Boy, Desdemona and Dulcimer, by Lord Seton's Drake, by Sam, out of Lord Seton's Morn.

The Goathland farmers have been amusing themselves with racing hounds under the following conditions: A trail

Archery.

PRIVATE PRACTICE CLUB.

SEPTEMBER SCORES.

THE shooting of the members of this club during September shows but few remarkable features, although a general tendency toward the shorter ranges is perceptible as the hours of practice shorten with the days. During the winter months there will be a few members, no doubt, who will have the hardihood to shoot the "York round" despite the snow and bitter winds, but most of the members will doubtless be content with sixty-yards shooting in halls, and leave the long ranges for next May. We trust that enough may cling to the outdoor practice to give us a comparison next spring between those who have practiced only at short-range, and those who have had even limited practice at the longer ranges of the York round. Among the notable performances of the month of September, the score of 45 hits, 261 points, made by Mr. Maurice Thompson on the 30th, stands pre-eminent. Unquestionably this is the greatest feat at the 80-yards range yet accomplished in America, and few instances are recorded in English archery annals where it has been exceeded.

The most beautiful record throughout the month was made by Mr. Frank H. Walworth, of Saratoga Springs. This archer, who is of only one season's experience, has at once pressed to the front rank of American archers, and bids fair to bear away the champion medal for the coming year. His 60-yards shooting is now better than that of any living magnate of England's archery, and it is doubtful if his equal can be found in America. Shooting 29 scores of 24 arrows each, he only fell below 100 points in a single instance, and ten times scored 24 hits. His average was above 120 points. This is admirable work. At 80 yards he got a splendid average, and only at 100 yards is he yet weak. His score of 416 at the single York is a record of which he should be proud.

Steady and beautiful shooting by Prof. T. R. Willard encourages the hope that we may see the "lone archer" as a competitor in the front rank at the next National. No progress could be more sure and satisfactory than this member has shown, his double York round of 167-703, scored on the 21st and 22d, being only a trifle above his average for the month. All honor to the "lone archer" who proposes to defy the wild weather of the prairie winter in pursuit of his solitary practice!

A new and welcome face appears this month, new to the Private Practice Club, though not new to archery. It is a pleasant duty to record the name of Mr. Brackett among the members of the club, and the score recorded at the single York opposite his name of 76-352 is one of the notable things of the month.

Mr. Hyatt, though an old acquaintance, comes newly among us, and every member will rejoice to greet him. He enters the arena with twenty York rounds as tokens of his prowess, and not a single additional score at the short ranges. Well done! Welcome!

Our good friend, De Graft, shows marked improvement this month. Sorry, however, to see that he has left the *Chambers*!

Some of our familiar names are absent. What has become of Peddinghams? Of old we leaned upon him for our good scores. Surely he has not forsaken us! And Mussey, and L. D. Edwin, and Jesse Deval, where are they?

Will. H. Thompson, Sec.

BUFFALO, October 29.—I send herewith the score of a match shot August 7, 1889, by the North Side Archers, of Chicago, and the Toxophilites, of Buffalo, N. Y. Five men on a side, 96 arrows each, at 60 yards:

North Side Archers.		100 yds.	80 yds.	60 yds.	Total.
W. Burman.....	24.122	22.124	23.123	22.123	92.511
J. W. Adams.....	22.114	21.116	21.114	21.113	86.457
Granger Smith.....	22.106	21.108	21.106	21.105	85.425
J. Wilkinson.....	17.107	17.107	17.107	17.107	68.438
J. O. Blake.....	18.107	18.107	18.107	18.107	72.438
Total.....	100	96	100	96	393.299
Toxophilites.		100 yds.	80 yds.	60 yds.	Total.
F. Sidway.....	22.119	21.120	21.119	21.119	93.527
W. Grainger.....	22.113	22.103	22.110	22.110	91.436
E. L. Parker.....	22.112	19.107	21.108	21.115	83.442
H. Hill.....	22.112	22.112	22.112	22.112	88.452
E. B. Smith.....	20.106	19.106	19.106	19.106	78.424
Total.....	100	96	100	96	417.297

This was the only match which was shot by these clubs, although the Toxophilites subsequently shot two scores in pursuance of an understanding with the North Side Club, but the latter club were prevented from shooting by the weather, or the absence of some of the members of their teams. I send the scores simply as a record of the shooting of the Toxophilites. First score, shot August 14, 1889, was as follows:

First score, shot August 14, 1889.		100 yds.	80 yds.	60 yds.	Total.
F. Sidway.....	23.117	22.126	21.119	22.123	89.465
W. N. Grainger.....	24.102	22.102	21.113	20.114	87.430
Henry Hill.....	23.113	21.109	19.103	21.101	84.408
E. L. Parker.....	22.106	23.107	22.106	19.101	86.439
S. S. Spaulding.....	17.109	19.103	17.103	18.104	71.424
Total.....	100	96	100	96	417.293

Second score, shot September 24, 1889:

Respectfully yours,

FRANK SIDWAY,  
President Toxopholites, Buffalo, N. Y.

NEW YORK ARCHERY CLUB, October 30.—At the annual meeting of this club, Oct. 27, the following officers were chosen for one year: President, Dr. A. B. De Luna; Vice-President, Mrs. A. L. Hill; Secretary, S. S. Roper, 82 William street; Assistant Secretary, Miss I. S. Bailey; Treasurer, Dr. H. T. Elliott; Assistant Treasurer, Wm. N. Frazer; Captain, Dr. M. McLean. Executive Committee—G. H. Sheldon, Geo. D. Pond, A. L. Hill, Mrs. A. B. De Luna, S. S. Roper.

J. D., Dayton, O.—The best book on training hunting dogs is "Hutchinson on Dog Breaking." Vero Shaw's "Illustrated Book of the Dog" is one that should be in the hands of every dog man. We can furnish numbers already published.

J. W. E., Pottstown, Pa.—My dog is very constipated. What shall I do for him? Ans. Want of exercise and absence of proper food are the principal causes. Give sulphur—one teaspoonful—with food once a day for a week, and give two doses of castor oil three days apart twice.

J. P. W., South Orange, N. J.—The fore-feet of my setter bitch, six months old, seem to be out of joint, or rather out of shape. She seems to be bow-legged. What is the matter and what can I do for her? Ans. The dog has been improperly confined. All young dogs should have their freedom. Chaining young dogs up will get them out of shape, and kennelling puppies in barrels will crook their legs. There is nothing to be done.

H. R. P., Gambier, Ohio.—I have a puppy ten months old, half Gordon and half Black Russian. In June last he got the St. Anthony's dance. Shall I use a battery? Ans. The puppy has chlores, or St. Vitus's dance. We have heard of St. Anthony's fire, but not of his dance. The battery would probably do more harm than good. Give six vomicas one-eighth of one grain and two grains of quinine made in pill three times a day. Gentle exercise in open air and careful diet may in time bring about the desired result.

T. E. L., New York City.—My dog, a large mastiff, has cancer within his ear. The crevices are discolored by a black discharge, and the dog frequently shakes and scratches his ear. You were kind enough to give a most valuable remedy for the mange; may I ask you to add to the obligation by prescribing for this trouble? Ans. Remove all dirt and hardened wax by careful washing or syringing of the ears with lukewarm water. If the wax is hardened it can be removed by pouring in a few drops of olive oil. The following preparation should then be applied: Goulard's extract of lead, one ounce; glycerine and carbolic acid, one-quarter ounce; finest olive oil, four and a half ounces. Mix the two first named, and add the oil gently, rubbing them in a mortar. The bottle must be shaken before the liniment is used.

BOYCE FOR SALE.—An English "Harvard Roadster," 22-inch, double hollow forks, suspension saddle, etc. For price and full particulars address W. DE RHAM, 24 Fifth Avenue, N. Y. Nov4,4t

C. S., Coleville, Pa.—We were talking about game birds in our store the other night in regard to quail (Bob White), partridges and pheasants. F. claims quail and partridges are the same and S. claims they are three distinct birds. Which is right? The discussion arose from reading the game laws of Pa., where it read partridge or quail. He said it was two names for one bird. Ans. Partridge and quail are local names applied in different sections to different birds. The partridge of Virginia is the quail of New York and Connecticut, while the partridge of New England is the "pheasant" of Pennsylvania and the South. In many parts of Pennsylvania the terms quail and partridge are indiscriminately applied to the Bob White (*Oryzopsis virginianus*). In New England, however, the quail is Bob White and the partridge the ruffed grouse.

A CONSTANT READER.—My Gordon setter is in good condition and seemingly healthy. He has a watery discharge at the eyes, which is particularly noticeable in the morning. He is three years old. My pointer, same age, is similarly afflicted, as is also my young pointer, fourteen months old. The latter dog was very sick with distemper, which ended in the formation of a kind of tumor, which discharged a quantity of matter and then healed. This was three months ago; since then I have found it difficult to fatten him. What shall I do for my dogs? Ans. The two first dogs referred to, if fat, caused from over-feeding, you can improve by giving limited amount of food and regular exercise. Wash lightly once a day with Goulard extract, one drachm, and one ounce of water mixed together. Small doses of sulphur will also be found beneficial. To fatten your young pointer, add meat with the meal and feed three times a day.

H. S., Troy, N. Y.—I have a black and tan dog, ten months old. About two weeks ago the inside of his mouth, and outside under his lower jaw, became very much inflamed and sore, causing him to rub and irritate it. I treated him by rubbing his mouth with borax water, which entirely healed it, but after a day or so I noticed he was very sore about his throat, and then I found that outside there was a sore about the size of a silver dollar. The hair has fallen out, and he is constantly rubbing it, and he can hardly swallow his food. His nose is quite dry, and there is a slight discharge from the eyes. I also have a setter puppy, four

months old, strong and healthy, but when she is excited she cannot retain her urine. Ans. 1. The probability is that there has been inflammation of some one or more of the glands situated under the jaw, in which case a flax-seed poultice, or some simple ointment, such as two ounces of lard mixed with a teaspoonful of tar, will afford relief. 2. As the little bitch grows older she will become free from the trouble you speak of. The less you intimidate her the better.

F. B. S., Elizabeth, N. J.—Will you please tell me what to do for a hound aged four years who has been troubled since December last with a running from one eye. I think he hurt it when hunting in the brush. There is a small spot about the size of the head of a pin on the dark part of the eyeball, from which a yellowish white matter is discharged. When the eye is washed he can for a short time see with it, but it soon fills up again. At the time of the injury the eye did not swell, but was very much inflamed. At the present time, however, the inflammation seems to have disappeared, but the eye is covered at all times with the thick yellowish matter. Ans. You have allowed ten months to elapse before attending to your dog. There are too many sportsmen like yourself, who, at the ending of the season, neglect their dogs until the beginning of the next. Such an injury as probably exists is of too delicate a nature to be prescribed for without seeing the dog. We would suggest that you show him to a competent surgeon. John Dancier, Central Hotel, Orange, N. J., is one whom we can recommend. The trouble you speak of may be one of two kinds. For example, if inflammation of the cornea exists very careful and unobtrusive treatment is demanded. If on the other hand it is a small growth upon the cornea, a caustic, accurately applied, or calomel dusted upon it would be likely to remove it. In any case the eye should be kept clean with tepid water.

—One of the firm of John H. Pray, Sons & Co., wholesale and retail carpet dealers, Boston, Mass., is, or claims to be, a sportsman, and he will at all times take great pleasure in doing a favor for a fellow sportsman in want of any kind or grade of carpeting, rugs, etc., etc. Correspond with the house, or call and see him, and see if he means what he says.—Advt.

**THE FOX GUN!**

Special Announcement.

THE MANUFACTURERS OF THE "FOX" GUN, FEELING THAT DEALERS, as a general thing, have not done justice to the merits of this WONDERFUL GUN, are determined to have them placed before sportsmen more generally, that their great merits may become better known and appreciated. It is needless to speak of the ELEGANT WORKMANSHIP AND WONDERFUL SHOOTING POWERS of these guns. It is a fact well established that they are UNSURPASSED BY ANY IN THE WORLD.

We propose for a limited period to offer a line of these guns at the following EXTREMELY LOW PRICES, after which the original prices will be restored, our object being to introduce the guns into sections of the country where dealers have failed to present them; in the firm belief that where they become known they will be the established favorite, and we shall reap the benefit in future of this great sacrifice.

Such Inducements Have Never Before Been Offered.

Sportsmen wishing to purchase one of these beautiful guns must respond at once, as the number offered at these prices is limited.

Fire-Arms, Ammunition, and all Articles connected with the same, and sole Agent for

**J. Stevens & Co.'s Celebrated Arms.**

DARLINGTON, Wis., Sept. 27, 1890.  
Dear Sirs—I received the 34 cal. rifle you sent me O. K. I did not expect to get an octagonal barrel and globe and peep sights. I thank you very much for your fair dealing and for the rifle. But I must tell you how the gun shoots. After adjusting the sights I fired five successive shots at a rest, 125 yards, and put every shot in a bullseye 1 1/2 inches in diameter. Three of the shots would be covered by a five cent nickel piece. I killed a hawk 300 yards the second shot. I am confident I could kill a deer with it three-quarters of a mile away. The gun is well balanced, and the workmanship is superb. I shall recommend the gun whenever I can. Truly yours, EUGENE HATFIELD.

SEND FOR NEW PRICE LIST OF SUPPLIES.

Taxidermists and Naturalists.

I have the largest and best stock of artificial eyes for birds and animals in the country, and have greatly reduced the prices.

W. J. KNOWETON,

108 Tremont street, Boston, Mass.

## TRADE—"BEATS THE WORLD."—MARK. Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware that in smoking Cigarettes made of ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by the burning paper (name) THE OLD CROOKS. CHARLES G. BERRY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco in general, and patented a process, March 5th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOOR and the injurious effects of the Oil of Crocoate are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking in or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will not be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Sold by all leading dealers. Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water st., NEW YORK.

**DUPONT'S**

Rifle, Sporting and Blasting Powder.

The most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

**DUPONT'S DIAMOND GRAIN,**

Nos. 1 (coarse) to 4, (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

**DUPONT'S EAGLE DUCKING.**

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

**DUPONT'S EAGLE RIFLE,**

A quick, strong, and clean Powder, of very fine grain, for Pistol Shooting.

**DUPONT'S RIFLE FG., "SEA SHOOTING,"**

FFG and FFFG. The FG for Long Range Rifle Shooting, the FFG and FFFG for general use, burning strong and moist.

Sporting, Mining, Shipping and Blasting Powders.

Of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammoth Powder, U. S. Government standard Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 70 Wall Street, N. Y. N. B.—Use none but DUPONT'S FG or FFG Powder for Long Range Shooting.

**The Hazard Powder Co.,**

MANUFACTURERS OF

**GUNPOWDER.**

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG FFG, and "Sea Shooting." FG in kegs of 25, 12, and 6 lb. and cans of 5 lb. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

THE

**First English Book on Fishing.**

THE TREATISE OF FLY-FISHING WITH AN ANGLE.

BY DAMR JULIANA BERNERS.

A fac-simile reproduction of the first edition, printed by Wynken de Worde, at Westminster, in 1496. No unique hand-made paper and binding. The extreme rarity of this work, and the great interest taken in it by connoisseurs, has suggested to the publisher the advisability of producing a fac-simile reprint for the use of those collectors and anglers who can never hope to possess the almost priceless original. The present fac-simile is reproduced from a copy of the original edition in the British Museum, by means of photography, and consequently retains every peculiarity of the original in faithful detail: the rude illustrations which adorned the first edition of this "Fly-fish plume" are here given in all their quaint roughness. The work is printed on hand-made paper of the same texture and color as that on which the first edition appeared, and the binding is of contemporary pattern and material, so that the reader of to-day in handling this volume can realize the form and appearance of the original, which must have delighted the eyes of those who studied "treasures pertaining to divers playman's matters belonging unto anglers." J. W. FOUTON, 706 Broadway, New York.

## FOREST AND STREAM.

NEW YORK, THURSDAY, NOVEMBER 11, 1880.

\**THE FOREST AND STREAM* goes to press Wednesdays. Correspondents are requested to mail their communications so that they may reach us before that day.

**THE NATIONAL AMERICAN FIELD TRIALS.**—The trials to be run near Vincennes, Indiana, next week promise to be in all respects very successful. From what we learn of the arrangements it appears that everything which careful foresight could accomplish has been done to render the meeting attractive to sportsmen, and to make it what it should be, a field where the best dogs of America can contend without fear or favor.

Great credit is due to Dr. E. Kellum and Mr. Sloc for the vigorous work that they have done to promote the success of the meeting. We look forward with great interest to the result of the trials, and feel sure that this meeting will exceed in interest any hitherto held in this country.

**BLUEFISH GONE SOUTH.**—The bluefish, *Pomatomus saltatrix*, have left the Northern and Eastern coast as far as New Jersey, and are now on their winter tour. They have settled the bills (of the young bill-fish) and with a young one under each fin (inside) they have departed from the shores of Long Island, like the last summer boarder, not to be seen again until next spring when the skipper of a menhaden steamer, standing in the prow of his piscivorous craft, erect as a sore thumb and with a north-east smile of satisfaction which expands until both ends of it can be seen behind, calls to the cook of his oleaginous ship: "Get out your squid, Sam, we'll have bluefish for dinner."

—We have received from the author an "Introduction to the Study of Mortuary Customs among the North American Indians," by Dr. H. C. Yarrow, an extended notice of which will be given next week.

### A DEATH TRAP IN SHINNECOCK BAY.

THERE are now untold millions of fish, mostly young ones, which are shut in by the closing of Shinnecock Inlet, and which will die soon if not let out. The bay is situated upon the south side and near the eastern end of Long Island, opening southward into the Atlantic Ocean, and is the feeding and spawning ground of millions of fish. Its fishery interests are very large; probably two hundred men support their families from the bay fisheries, taking the different fish in their seasons, as bluefish, weakfish, sea bass, etc., in spring and summer, and crabs, eels and flat fish in winter. The bay is deeper than the Great South Bay, averaging about twelve feet, but its inlet is often filled up and stopped by the autumn storms, one of which closed it up about two months ago. Intelligent fishermen place the amount of young bluefish (snapping mackerel), weakfish, menhaden, porgies and sea bass of this season's hatch, now confined in the bay at many millions, while of the older fish there is also a great number, one of our informants saying that he recently saw ten acres of solid fish in one mass in the bay.

Learning these facts we recently visited the bay and found them confirmed by the professional fishermen of Quogue, Atlanticville, Good Ground and Southampton. In conversation with Mr. Wm. N. Lane, the well known host of the sportsman's resort at Good Ground, so famous for its duck and bay-bird shooting, he said that he would open the inlet at his own expense if allowed, but that there was a fine of \$25 and imprisonment for so doing. Astonished at learning that a man might be subjected to a criminal prosecution for doing so good and public spirited an act as Mr. Lane proposed to do, we made further inquiry and learned that at the last session of the Legislature of New York the Supervisors of the town were empowered to appoint two commissioners, who had power to locate an inlet to be dug at the expense of the town, and that it was unlawful for any one to make an inlet at any other place.

Two men have been appointed; one of them is a man who has no interest in the bay and who does not care if it is never opened, and the other has a hotel somewhere in the eastern part of the bay, where an inlet is not practicable, and he does not care to locate it elsewhere, and in the meantime the fish will die.

The death of the fish is not the worst evil. Many of them do not decay until warm weather, according to the fishermen, and then the waters are foul, a "slick" is formed on top from the oil, and this, flowing out at every tide, repels the spawning fish from entering next season to deposit their ova. This is a case which calls for immediate action, and if Shinnecock Bay is not opened during this month we hope that some way may be found to punish derelict commissioners to as great an extent as the law would inflict upon Mr. Lane or others who should offer to do this necessary work. The Legislature should be called upon to repeal such portion of the act as inflicts a penalty upon men who offer to remedy the effect of storms in closing this inlet. It seems to us not only unjust but outrageous. The strip of sandy beach which separates the Atlantic from the bay is from sixteen to seventy-five rods in width, narrowest near Good Ground, in the western part, where Mr. Lane's bay can open an inlet in twenty-four hours, and the fishermen at Atlanticville and Quogue, west of that, say that one made there is more likely to stand than if made in the Eastern and wider part.

We call the attention of our public spirited Fish Commissioners to this grievance. They are stocking the waters with young fish and here are millions of fry, one-quarter grown, suffering to be let out to find their migrating fellows or to go to deeper waters and more congenial temperature, which will surely die in another month. We are aware that the Fish Commission are powerless in this matter, but call their attention that they may see that they should be empowered to act, and act promptly, in a case of this kind. To dig such an inlet is a trifling matter, if legal restrictions are removed, for if a small ditch is made the tides will attend to finishing it, and we call on somebody to do something to save, not only the fish now living, but the spawning ground of a most valuable fishery from a pollution which will render it obnoxious to the fish next season.

### TRAPPED BIRDS ON LONG ISLAND.

WE commend to the consideration of the sportsmen of this city and Brooklyn the communication published elsewhere respecting the illegal traffic in trapped birds, extensively carried on by the employees of the Long Island Railroad.

The writer of that letter tells us that on the occasion of his return from a recent shooting trip to Greenport, L. I., there being seven other gunners on the same train, the baggage master had in his possession more birds, which he had bought of the trappers at the stations along the line, than the eight sportsmen could show as the result of their day's shooting. He further avers that this was nothing unusual, but that the same thing has been going on day after day, and will probably continue so long as the supply of birds holds out.

The law on this point is explicit. Section XI. of the game statute reads:

No person shall, at any time or place within this State, take or kill any ruffed grouse, commonly called partridge, or any plumated grouse, commonly called prairie chicken, or any spruce grouse, commonly called Canada partridge, or any quail, with any net, trap, or snare, or set any such net, trap or snare for the purpose of taking or killing any of such birds; nor shall any person willfully sell, expose for sale, or have in possession any of the said birds after the same have been so taken or killed. Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of \$10 for each bird so killed or had in possession. And it shall be lawful for any person to take or destroy any such nets, traps, or snares wherever found.

When sportsmen are accorded the privilege of shooting over certain premises on the one condition that they do "not disturb the boys' snares down in the field," and when these sportsmen—eight of them—after a day's tramp with gun and dog over the snare covered fields, come home bringing in a baggy bag of birds, while the baggage master on their train, who has confined his "sporting" to his baggage car sends his boy through the train to peddle to these sportsmen a couple of dozen brace of trapped birds the inference is plain that there is something exceedingly putrid in Denmark.

There ought not to be any hesitation or misapprehension about their duty by the organizations whose business it is to attend to this matter. If the trade in snared birds is carried on with the boldness alleged by our informant certainly no extraordinary detective skill is required to put the guilt just where it belongs, and the simplest way to go about the suppression of the traffic would be the arrest and prosecution of every baggage master, brakeman, news agent and stoker on the Long Island Railroad in whose possession the birds might be found.

This appears to us to be the simplest and most promising mode of procedure. When once the trade of the railroad employees is stopped, the trapper will find a poor market for his birds and little encouragement to pursue his practices. The efforts of the game associations ought to receive the cordial support of the Long Island Railroad managers, who owe it to their sportsmen patrons to stop the contemptible work of their employees. The ordinary rules of business ought to teach them that the patronage of the passengers who go over their road to and from the shooting districts is much more to them than the revenue accruing to their brakemen and baggage masters from their services as go-betweeners for trappers and dealers. A general order from headquarters respecting this subject would be appreciated by the public. We are confident that if a committee of the Long Island Sportsmen's Association should confer with the railroad managers they would find the latter ready to further their endeavors to prevent the extermination of the game birds of Long Island.

**HATCHING FLOATING EGGS.**—We publish in another place a figure and description of a new hatching apparatus invented by Col. M. McDonald, Assistant to the U. S. Fish Commission and Fish Commissioner of Virginia. It is not patented, and is generously given to the fish culturists to use, if it so pleases them. An examination of it will show that it is on the principle of the conical hatcher, but reversed, the eggs of the cod having as strong a tendency to rise as those of the shad have to sink; and though there are several forms of apparatus which hatch cod eggs tolerably well, there was need of a better one, and certainly this new device of Col. McDonald's looked fair and worked well with beeswax imitations of eggs, which are about the specific gravity of codfish eggs. It may be that this is destined to work the same revolution in hatch-

ing floating eggs that the cones have in shad hatching, superseding other apparatus by reason of compactness and the facility with which they can be worked. We will watch for reports of its use this winter at Gloucester and other places where the cod will be hatched.

### YARNS.

**D**ARK clouds arose, about the time we did, to repulse the wooing kisses of the morning sun, and growing every moment more and more threatening, finally struck a mountain top and sprung a leak. Saint Switlin! how it rained! Golden showers for the corn, emerald for the grass, ruby for the clover. The wind howled dismally and forced his way into the parlor. He does not knock at your door as a gentleman would, and enter in a modest, unobtrusive manner, but he kicks the door open and stalks in like the rough rider that he is, overturning everything as though he were the boss and sole proprietor of the ranch.

A thoroughly bad day fills its proper place in the angler's calendar. It is put there partly to make the better ones more attractive by comparison. A whole season of superlatively perfect days would bring in its train a sort of contempt or perhaps unthankfulness; but sandwiching unlucky and unpleasant ones between adds infinitely to the charms of the perfect angling day, when the wind is just right, the ripple just high enough and the fish a-biting.

"This is one of my days," says Tyro, after breakfast has been disposed of, "and I expect, as you are all to be housed for a few hours, to hear Munchausen outdone. Anglers can outdo the most famous story tellers of any other profession."

"How do you account for it, and why do you associate with men who have so little regard for probity?"

"It seems as though the rarified atmosphere up here has an expansive effect, and is conducive to exaggeration of fishing and hunting exploits. It not only braces up a man physically, but his conversation gets braced up, and sometimes so high and well sustained that a judge and jury would be deceived into accepting as truth his most inflated flight of fancy. I associate with them, trying by so doing to correct their bad habits."

"You are an ass, Tyro; but whether you inherited or achieved or had assinnity thrust upon you I am not prepared to say, but that you are an ass I do affirm."

"Well, now, Jack, all hard names aside, I have yet to meet the man who, as an angling historian, is strictly truthful. My experience is this: I care not how honest a man is in his business relations and his ordinary everyday transactions, that same man will not tell things exactly as they are when he recounts his adventures by field or flood. To illustrate my position: I went fishing one day with a clergyman. We went to one of the fishing stations on Staten Island. We caught seven weakfish—"

"I don't believe you caught seven weakfish."

"Hear me out and then contradict me; but allow, for the sake of argument, that we did catch seven weakfish. When we came ashore we met a party who had been out nearly a week. They wanted some New York papers we had, and for which they gave us half a dozen more weakfish. That clergyman showed those fish as part of his catch. He did not, I will say to his credit, claim to have caught them. If his friends inferred that he did he was not going to disabuse their minds by telling things as they were and damaging his reputation as an angler. You are all the same. You all utter these little fibs with the most unblushing mendacity. You guard your reputations as skillful anglers more zealously than any other quality you may possess, and knowing this I take very little stock in fish stories. I never knew a man to guess anywhere near the weight of his fish. He always exceeds the mark. There are plenty of men whose words I would unhesitatingly accept in regard to anything but fishing, and on that subject I would not believe them under oath. Munchausen tells few fish yarns because he knew that the guild of anglers were thoroughly competent to keep up their end, and would probably be able to grandly discount his most extravagant stories; and I admire and honor his judgment. He would prove in comparison the embodiment of strict veracity. You anglers lie artistically and grow to believe your own piscatorial falsehoods. It is blow, blow, brag, until the familiar quotation, 'That's a fish story,' has become a synonym for every improbable and impossible yarn he can spin. No angler lacks a brother angler's experience but he either pronounces it fishy, or proceeds to draw something still more wonderful from his own well-filled storehouse of fiction."

"There is a well-defined vein of spiteful jealousy running through your speech. You, Tyro, never had any luck fishing. That is known of all men. Your opportunities have been golden, but you never could take advantage of them. You are totally lacking in almost every qualification that the angler requires. You have no patience. You are excitable. You are mechanically clumsy and stupid. Put a rod in your hands and you are a pathetic picture of ignorance and awkwardness. You cannot learn to tie a decent knot. I have spent hours with you vainly endeavoring to teach you how to fasten your hooks, and yet you know to-day as little about it as a child. I gave you up years ago."

"Personal abuse is one thing and facts another. There was Barney Whistler, one of the most truthful men that ever lived. A friend asked him to substantiate a statement regarding some fishing excursion. 'Excuse me,' said Barney; 'you will have to swear to your own lies, for I have all I can

do to manage and remember my own.' You young fellows, however, are not half as bad as the old veterans. They are the most unconscionable old braggarts in existence. Not, however, from any intentional tendency to falsehood, but from an unrestrained habit of harmless exaggeration that took possession of their souls, and through the lapse of ages has so thoroughly fortified its position that it is impossible to dislodge it. Theirs are genuine fish stories, to which they cling with barnacle tenacity. It does not take them long to make a bull-frog attain the proportions of an elephant. The fish they have caught are like Falstaff's men in buckram—exaggerated to an almost unlimited number. But these rusty old chroniclers can safely be consigned to the category of 'have-beens,' who have no proof of their passed-away prowess save in their own unsubstantiated assertions. They depreciate everything of the present, and say, 'When I was on the Restigouche, or the Beaverkill, in '45, then there was fishing.' The still small voice of conscience never smites them; but little fault will you find with them for that. You will all be in the same boat after a few seasons more. The wrinkles will gather, slowly perhaps, but surely; the eyes fail, the limbs grow weak, the blood run sluggishly through the veins, the voice will tremble, imperceptibly at first, but the quaver will come; yet the tongue will never weary, while memory yearningly reverts to the long-ago angling days, to you the brightest tints in Time's ever-changing kaleidoscope. Then your talk will be wise and reminiscent and oftentimes thin. I'll stick to that, although I say, good old friends of the rod and reel everywhere, I forgive you all, and may the evenings of your lives be a sunset without a cloud."

MILLARD.

### CENTRAL PARK.

**T**HE condition of Central Park is a disgrace to the city, and a disgrace which is month by month growing more flagrant.

It is asking too much that commissioners, who receive their appointment through no greater special fitness for office than the color of their political creed, should appreciate and respect the designs of the landscape artists who planned the Park; and it is therefore a matter of no surprise that those designs are ignored and frustrated. But there are other, and to the general public more patent, signs on every hand of the incompetence of the present management of New York's pleasure ground. From Fifth avenue to Eighth avenue, and from Fifty-ninth street to One Hundred and Tenth street, the visitor is confronted by glaring evidences of shiftlessness and neglect.

The walks are untidy, the concrete broken and the wire fences straggling and disjointed. The mall is muddy, and through its centre runs a narrow walk of rotten planks. Here, unless the visitor exercises considerable ability in getting out of the way, he is jostled and bruised by the rampant goat teams which, with their noisy, impudent and rowdyish attendants, monopolize that part of the Park.

The stone bridges are marred by the hundreds of idiots' names scrawled over them, and many of the wooden bridges are rotten and patchy.

The arbors and rustic works are rotting and falling to pieces, without even the pretence of being patched.

The banks of the lake are seamed with the roadways of the huge rats, which vermin, with the English sparrows, are the most numerous and conspicuous members of the animal kingdom to be seen in Central Park.

Add to all this that the Park policemen upon assuming their uniform become at once thereby deaf, dumb and blind, and that the walks and rambles are infested by "gangs" of boys and roughts who salute the ears of the lady passers-by with oaths and obscenity, and we have a ready explanation of the fact that decent people are year by year shunning the Park and relegating it to the undisputed and destructive possession of the great unwashed.

If the Obelisk ever reaches its proposed site, it will be a most fitting circumstance that this monument of the ruins of the East should be erected amid the ruins of a great public park of the Western world.

**ALLEGED GUN FRAUDS.**—J. A. Ross, of the firm of G. W. Turner & Ross, 17 Dock Square, Boston, Mass., was arrested last week by a special agent of the Post Office, for alleged violation of the postal law, which forbids the mailing of circulars concerning a scheme to deceive and defraud the public by obtaining money by false pretences. This firm has distributed throughout the rural districts, and by means of such papers as will publish their advertisement, voluminous circulars setting forth extraordinary bargains in firearms. One particular form of inducement held out is the offer to send for a certain amount a gun, rifle or revolver worth several times the price asked for it, the purchaser in reality receiving a weapon which he could buy in a reputable gun store for less than he had paid Messrs. Turner and Ross.

We have inspected one of the breech-loading shot guns which was sent to a purchaser who wrote for one of the guns styled "The Empress, Extra, No. 5," represented to be the highest grade of a first quality Bonehill or Tolley. The price asked and paid was \$50. The gun was, to the best of our judgment, the lowest grade of a Bonehill that is made with all the improvements, and it bears the name "Henry Tolley," evidently a play upon the name of the well known firm of J. & W. Tolley. This gun could be duplicated in any reputable gun store for \$35 or \$40. It is in no sense a \$200 gun, as represented, nor even a \$50 gun.

We understand that it is for an operation of substantially this nature that Messrs. G. W. Turner and J. A. Ross are now held in \$500 bail each to appear for examination Nov. 16.

## The Sportsman Tourist.

### A PRAIRIE FIRE ON THE SEVIER.

By Cosmopolitan.

**A**FTER a long and tiresome day's march we went into camp on the west bank of the Sevier, near old Deseret City, at 4 P. M., weary, dusty, hungry, thirsty and irritable; and the appearance of our camping place did not add much to our contentment, for there was no shade, and the water, which was brackish and scant, teemed with millions of animalcule. To get at it the men and animals were obliged to wade through soft and tenuous mud for nearly forty feet. An attempt was made to build a sort of causeway of rushes, but failed, for the more bundles we placed in position the more were needed, until the supply failed, and we were as badly off as ever, and so gave up the attempt. The sun came down as hot as Topical, but ere long we had up our tents, and beneath the canvas roofs comparative comfort was attained.

Our chief and myself occupied a wall tent, which, compared to the little dog-houses of the men, was a palace. But I missed the luxury of Durham, and lying on my mattress, the ill-humor I had been suffering from for several hours gradually evaporated. But not so with Mott, who tossed and turned in his blankets, used some bad language, and, muzzling the country, the expedition, the Army, and the water in particular, for after several attempts to drink it he had given it up in despair.

"My dear boy," said I, "why make such a fuss? Why not compound a grand big forum of milk punch and drown your sorrows in the clouding howl?"

A grunt was the only response. Again I repeated my query. Still no reply.

"Well," said I, "if you are too lazy to do your duty as a man and an officer, I shall myself make a punch and drink it all alone."

"Look here, Pills, what is the use of tantalizing a fellow that way? You know very well that all our liquor is gone. And so, the last bottle when he started; and where the Old Scratch can you find milk in this blank prairie, unless you expect to get it from the old bell maw?"

I answered by running my hand inside my rag pillow and bringing out a quart bottle of brandy, the last of twenty-four brothers, which had been reserved for use in emergencies should attack the camp. My companion beamed, and when he saw me extract from my haversack a can of Borden's condensed milk, eagle brand, he leaped to his feet and favored me with an unmeasured hug.

"Hooley! Hooley!" shouted he to the cook, "put on a kettle of that water and bring it to a boil."

This was to kill the animalcule. While the water was being prepared sugar was procured and an old nutmeg found, and we anxiously awaited a chance to compound the much needed medicament.

By this time the sun was gradually sinking, and as the shadows lengthened, insects began to come out and disport themselves around much to our discomfort. Musquitoes by the millions, billions of bugs and multitudinous moths frolicked and gambled. For awhile I amused myself catching some as specimens, but as they became more numerous I was forced to beat a retreat to the open air. Mott bore the torments manfully, having in anticipation "a balm in Gilead." But he eventually succumbed, and yelled: "For goodness sake, Pills, build a fire and smudge into the tent!" I proceeded to tear up the long Indian grass with which our camping ground was covered, to serve as fuel, and leave a clear space for the fire so that it might not spread. Hooley advanced to the tent and said, "Here, Leftenant, is the water. It has boiled, but I cooled it in the river, and ye can use it now." "Go ahead with your fire and I'll bring the punch," said Mott.

I looked carefully around to see that there was no danger of the tall grass igniting, wet my finger and held it up to see if any wind could be felt, all appeared safe, and I struck a match and soon had a blazing and smoking fire, and with my hat I fanned the smoke into the tent. Suddenly I felt a breath of wind from the east which in a second was followed by a dust swirl. I rushed to stamp out the fire, but in less time than it takes to write the account, some embers were blown into the surrounding grass and a terrific flame sprang up which was frightful to contemplate. I stripped off my coat to beat it, and, quick! help me to put this fire out; the grass has caught." But he intent on his philosophical manipulation, or thinking I was joking, refused to stir. My yells brought the men in camp to my side, and, with blankets and overcoats, we fought the fire and tried to keep it down and away from the tents, but in vain. Mott, finding it no joke, rushed out and hammered away like the rest. In a few moments our tent took fire and we attempted to pull it down. Just as the last rope was loosened, Mott yelled, or rather screamed, "Our punch, our punch, and sprang into the tent, determined to rescue it, and while doing so, down it came on top of him, afire in a dozen places; but with a perseverance worthy of a better cause he held fast to the pamkin and emerged from the ruins with it in his hands. He quickly placed it, as he supposed, in a secure place, and joined the fire-fighting crowd. The flames still capered resistlessly on, and in less than ten minutes had swept over the entire camp, with the exception of the place where the wagons were parked, and went rushing out toward the west with ever-increasing fury, until only a long, low line of fire was visible in the dim distance.

We rested from our fruitless labors and ruefully looked around us to ascertain the damage. Every tent was burned up, the arapajos of the pack train badly scorched, and there was a general wallowing over scorched and damaged outer garments. My valise and gun-case were badly burned; several of our blankets had been scorched, and a number of bottles containing specimens had burst. In short, we were in a bad fix. The men, old mountaineers and travelers, did not dare express their feelings too openly in the presence of their commanding officer, but the poor "tender foot" pilgrim (for such I was) came in for a fair share of expletives for stupidity and greenness. I knew I deserved all that could be said, and held my peace.

Only my friend walked up to me and cooed: "See here, old fellow, did you see anything of my blouse?" "No; where was it?" "In the tent." "I expect it is burned up,

then." "I hope not, for in the pocket I had over \$400 of greenbacks—Government funds." "Great Heavens! Are you joking?" "Not at all, let's hunt for it." He called some of the men, and lighting fourteen candles searched for the missing garment. It was found at length a mere mass of soiled rags, but no money in the pockets, for somebody had doubtless picked it up to beat out the fire, and the notes had fallen out. Another search, and singular to relate, about \$100 was found, but so charred that great care had to be taken to prevent them falling to pieces. I may add that a bill had to be introduced in Congress to account for the loss of this money.

"Well, at all events," said our chief, "our milk punch is all right." We walked to the place where the can was, and we stopped to raise it to his lips, but dropped it quickly, for the fire had passed over it, and the tin and contents were too warm for comfort. He lit it cool, and then finished it with vigorous sighs. We crept into our blankets superfluous, and in mournful silence Mott ejaculated as he composed himself to rest, "Oh, Pils, what blanketed asses we have made of ourselves." I agreed with him, and so expressed myself and with a "Good-night" followed his example. No sleep yet awhile, for in a few minutes a drizzling rain commenced which lasted apparently for hours, and long before it ceased we were wet, and as uncomfortable as need be.

Suddenly we heard an approaching tramp coming rapidly toward the camp, and in a few moments a band of wild horses swept over us, snuffing our milk punch, and our horses' stampede followed. It was no use trying to follow at that hour of the night and in the pitchy darkness, so we again composed ourselves for sleep which would not come, and sunrise saw us still awake, rueful and disconsolate. This *noche* we lost six fifteen good horses, although all but five were subsequently recovered.

Sufficient time has elapsed since the incidents related to wear away any little shame or mortification that the principal actors may feel, and the story has been told as a warning to those who are fond of drinking milk punch, and may perhaps be ignorant of the danger of lighting fires on a grassy prairie. My friend and companion still ornaments the Army, and a better or truer comrade never wore the brass and blue.

#### A STORY FROM MONROE.

SITUATED on the broad, shallow river basin, near Lake Erie, Monroe, Michigan, presents an attractive side to the sportsmen the year around. In the early autumn the woodcock in the thick stubble and peat lands that border the river command his attention; later, he can pursue the ruffed grouse, quail and turkeys in the uplands; and when the cold north winds have turned the marsh grass in the bays at the mouth of the river to a golden yellow, he can enjoy the best sport of all among the myriads of canvas-backs, red-heads, and other wild-fowl that select this place as their feeding-ground. Nor will his sport end here; for when the trees are again green, and the water-lilies and the flowers of the stately lotus are again in bloom, he can quietly drop his flies in the ripple below some half-sunken log, and a three-pound bass will test the pliancy of his rod and the skill of his good right arm.

Perhaps as remarkable an illustration as has been afforded of late years of the abundance and variety of game at Monroe occurred in the fall of 1875 in the following incident, which can be substantiated by the old gunners and boatmen of the marshes:

A gentleman from Syracuse, N. Y., who has passed a portion of every autumn at Monroe for several years, arrived late one Friday evening, and was grieved to learn from the sportsmen already arrived that the ducks were so scarce on the marshes that the sport would hardly repay the unpacking of his guns. Determined to stay and investigate for himself, however, our friend unpacked his trappings, and the next afternoon, while awaiting the arrival of his dilatory hunter, he concluded to take a light punt, and his Greener, and make a prospecting tour in the North Marsh. Paddling about for some time in his accustomed haunts, the sportsman came to the conclusion that his fellow gunners had rightly informed him, for at the end of nearly five hours of weary punting he had only half a dozen ducks to his credit. Wishing to stretch his legs a little after maintaining a cramped position so long in the boat, our friend landed at the Curry, and walked aimlessly down the bank. At Sandy Creek Cut he sprang a duck of widgeons, out of which he dropped four, and seeing a couple of green-winged teal approaching at a distance he hurriedly inserted two fresh cartridges, dropped behind a bunch of rushes, and as the teal passed with bullet-like rapidity down wind, he gave them both barrels, and was delighted to see them drop in the marsh. He had no sooner secured this pair, than half a dozen widgeons, anxious to finish their supper, came circling around a clump of marsh grass, a long gunshot away, and one was so unfortunate as to fall within the hunter's right, and while he was returning toward his boat with his load another, a solitary old drake, was added to the pile. Depositing his trophies in the boat, the hunter concluded that, as twilight was fast approaching, he had better be seeking home, and with paddle on hand he was preparing to shore off, when down with the west wind came a single "honk!" Being on the marsh side of the bar, the hunter was near no cover, but trusting to luck he dropped flat on the sand, and without turning, cast his eager eyes to windward and saw a flock of about a dozen Canada geese flying low over the top of a clump of dwarfed trees, and skirting the lake side of the bar. As they came in line, about twelve rods away, the motionless hunter gave a single "honk!" and as the birds hesitated a moment in their flight, the gale drifted them closer in, and "bang! bang!" spoke the Greener, and two noble geese fell, one on the bar and the other out some distance in the lake. Retrieving the first one, the hunter concluded to leave the other to be picked up afterward, as the gale rendered it unsafe to embark on the water, and with his gun. "Glorious evening for one day," thought he, as he put his good Greener and hugged the fat goose on his way to the boat; but ere he had progressed half the distance he caught a glimpse of something that made him drop the goose on the sand and stop still in amazement. Just one glimpse, but enough to distinguish three fat, sleek turkeys running through a narrow belt of bushes, right in the path. "Pshaw! tame fowls probably," thought our friend, knowing it to be an unlikely place for wild turkeys, although they were frequently shot in the uplands back from the river. Joe, the old gobbler, poked his head through the bushes, gazing in the very face of the motionless hunter, who, still doubting in the uncertain light, took two rapid steps forward, and as the birds immediately took wing, he drew on the gobbler with his right and the biggest hen with his left, dropped both, and gazed begrudgingly at the other retreating bird, thinking what a good thing a three-barreled

gun might be in some cases. The male bird was a fine specimen, weighing fully fourteen pounds, and the hen about nine. Their glossy plumage and soft, velvety fur on the neck and legs told our friend that he had not made the mistake of shooting a neighbor's favorite gobbler, and that his success as he retreated to the boat, he deposited his load and made his way in the darkness to "Uncle Joe's" where he was awarded the honor of bringing in the best bag of the season, considering the time occupied in securing it. As Uncle Joe said: "You was foolish for comin' in so soon, for while your luck was on you might 'a' shined a buck or a catamount. I shouldn't expect nothin' less with such luck as you had."

The abandoned goose (a large one) was picked up next morning on the shore, where it had drifted during the night, making the bag just fourteen ducks, two geese and two turkeys, all—except six of the ducks—shot within a half hour.

SENeca.

#### COEUR D'ALENE LAKE.

ENGINEER'S CAMP, NEAR SPOKAN,  
Washington Terr., Sept. 30, 1880.

EARLY last month I received instructions from the Eng. Pen d'Orville, En. N. P. R. R., to proceed without delay to Coeur d'Alene Lake and its southern tributary, the St. Joe River, to look after certain interests in that direction. So, one bright morning I left Asst. Eng. Scovill's camp, with blankets and fly-rodd strapped behind the saddle, and the following afternoon arrived at Coeur d'Alene Post, one of the most beautiful and romantic spots to be found within the boundaries of Uncle Sam's dominion. Taking no heed of entreaties to remain there and fish a day or two, and proof against the inducement held out by a friend of "eighty-three trout yesterday afternoon of two pounds," I engaged a boat and guide, and proceeded to lay in provisions for two weeks. We were off bright and early in the morning, the guide taking his rifle, and my own outfit being reinforced by one of Colt's new breech-loaders. Rowing leisurely, for the day was hot, and the trout more than anxious to take the fly as I cast from side to side occasionally, at four o'clock we made camp on the beach below a rocky point, about eighteen miles from the Post. Those three and four pound trout were delicious, but, alas for human calculation! we found that five of them among two men—and men with mountain appetites, too—were just two and one-half too many. But they were not wasted, for there was an end to all this, even stowed away a lank and hungry Indian paddled alongside, with three freshly killed deer in his canoe. Addressing him in "Chinook," we asked him to come ashore and have some "muck-a-muck." His face wreathed itself into one of the most hideous grins I ever beheld, as he exclaimed "Na-wit-ka" ("yes"), and within less than five minutes he had "boltered" himself outside of the remainder of those fish, plus four pounds of raw bacon, a pound and a half of sugar, three pints of coffee, a can of Boston baked beans and a big loaf of bread. But there was an end to all this, even an Indian's appetite, and as he swabbed up the last bit of grease in the frying-pan with one hand, I grasped the other, and in tearful accents begged him to visit us to-morrow and to bring all his family, from his mother-in-law down. He gracefully accepted the invitation, and after giving us a big chunk of venison, and the information that we could kill "hi-yu" (deer) as soon as we reached the St. Joe meadows, grasped his paddle and was soon out of sight around the next headland.

His information was correct, for it is my honest opinion that there is more deer and bear to be found in the western Valley than in any other portion of the known world, and Eastern sportsmen should hope for the speedy and safe completion of the N. P. R. R., if for no other purpose than to open up this magnificent sporting domain to the guild. The lake itself is some thirty miles long, but as it has been described in your columns by abler pens than mine, I will confine myself to the river, which enters at the southern extremity of the lake. It takes its rise nearly two hundred miles from here, amid the eastern slopes of the Bitter Root Range, and near the headwaters of the Greener. Its average width from mouth to rapids, which was as far as my instructions told me to go, is about seventy-five yards. Depth of water, from fifteen to twenty feet, and clear as crystal. The current is so slight as to be scarcely perceptible. The banks are lined for the most part with huge cottonwood and willows, while here and there tower huge belts of gigantic fir, cedar and pine.

The valley itself is one huge meadow, from one to three miles in width, and in two earlier side by the majestic mountains of the Coeur d'Alene range. Years ago the Catholics founded a mission there, and as an evidence of the zeal and energy of the priests in charge, about ten miles up the river, surrounded by fruit trees, stand the old mission houses and barns, while acre upon acre of timothy grass waves in the wind and gladdens the heart—and appetite—of deer without number. Every winter the Indians resort there to participate in their annual "drive," and an old "Siwash" showed me one point where last January they killed one hundred and eighty deer in two days. Their *modus operandi* is as follows: First, selecting a narrow neck of meadow, and caused by a bend in the river, they divide into parties of twelve or fifteen, each under control of a captain; then, proceeding to the hills a few miles from the river, they separate, keeping within hailing distance of each other and form a semicircle of several miles in length. Now the drive begins in earnest, and with shouts and cries such as Indians only know how to utter, the frightened deer are driven before them, the outer edges of the semicircle gradually closing in upon the timid creatures until the river is reached, and the deer, sick of the rifles, and the mountains catch the sound, and send the echoes from peak to peak, until the last deer is killed. There is plenty of danger attached to the drive, as witness the case of friend C., who participated in a drive on Hayden Lake last winter, and was only too glad to seek refuge in a huge hollow log, to escape the too many stray bullets that were whizzing about his ears.

I found the best fishing near the rapids, about thirty-five miles from the mouth, and on the evening before I left, landed at six consecutive casts a twelve pound trout, whose combined weight was twenty-eight pounds. The largest trout I killed weighed six and one-quarter pounds, and I saw many larger ones. They differ greatly in appearance from those taken in the Spokane River—at least, the larger ones do. Their bodies are long and slender, tapering from head to tail; above the lateral line is a row of bright red spots; eye extremely large and bright; under jaw tinged with crimson, two double rows of teeth, and teeth upon hyoid bone; tail almost, if not quite, as square and pointed as a sword. I have fished the waters of Maine, New Hampshire and Puget Sound, and have killed plenty of hard fighting trout and salmon, but in all my experience I have never seen any fish, trout or salmon which pos-

sess such a fund of pluck and endurance as do those St. Joe beauties.

In a few weeks the meadows will resound to the cries of countless wild fowl, and I venture to predict that in a few years Coeur d'Alene Lake and its tributaries will become the Mecca toward which the best sportsmen in the United States will yearly turn their eager steps.

This month my duties led me to a little lake six miles long, about thirty-five miles north-east of Spokane Falls. A lovely sheet of water, nestled among the pines in the foot-hills of the Coeur d'Alene range. There one afternoon two of us killed ninety trout, from one to three pounds weight, and while returning to the "Tea" camp at dusk, the wolves kindly drove a two hundred pound buck down upon us, and we, nothing loth, gathered him in, with a shot from a .45 cal. rifle, and we feasted upon his juicy ribs in the bright moonlight, to the tune of "A frog he would a wooing go," played upon a cracked fiddle with two strings.

The sporting world probably does not realize what will be universally known in a very few years, that the Northern Pacific Railroad will prove the "open sesame" to the finest game and fish region in America, where sporting will be a pleasure, and not the toil that I have often found it in Maine and New Hampshire, while firing guns and mosquitoes with one hand and trying to land a poor little half-pound trout with the other. We have very little occasion for the use of tar and oil. Prairie chicken shooting is at its best now, the whole country is alive with them, and a three hours' tramp in the vicinity of Eng. Scovill's camp is sure to result in a full bag. The numerous lakes throughout this section of Washington are beginning to be covered with swans, geese, and ducks, and the honest granger will have a welcome addition to his regular diet of potatoes and bacon. H. B.

### Natural History.

#### OUR WATERFOWL.

WITH the approach of winter the season for wild fowl shooting draws near. Already the guns have commenced to sound both in the interior and along the coast. In the marshes of Canada and the Western States the mallards, teal and pintail are falling thick and fast, and on the Chesapeake the boom of the heavy guns has, since November 1, sounded the death knell of many a canvas-back and black-head. People are beginning to paint up their geese and brant decoys, to bait their blinds, and to load their shells with BB's; and, with the first real cold snip we shall receive reports of the bags made at the various shooting resorts, inland and along the coast, on the geese and brant.

We so constantly receive inquiries from our readers in relation to waterfowl of different species, which they have killed, but are unable to identify, that it seems worth while to give some facts in regard to these birds in order that each one may be enabled to tell for himself the names of such as may fall into his hands. It would be for the interest of each sportsman in the country to purchase a copy of Dr. Cones' admirable "Key to North American Birds." By the aid of this work, the reader, after a little practice, would be able to settle for himself all questions with regard to the identity of any of our game birds, and could learn the differences and relationships between the different groups.

The term waterfowl, which is frequently loosely applied to our shore birds or bay snipe, might better be restricted, it seems to us, so as to include only the swans, geese and ducks. These constitute three sub-families of the *Anatidae*, a group of great size and economic importance, and of very wide distribution. Dr. Cones gives one hundred and seventy-five as the number of species included in it. He says of these, "They differ a good deal in minor details, and represent a number of peculiar genera aside from the ordinary types, though none are so aberrant as to endanger the integrity of the group."

North American waters are certainly well peopled with birds of this group, of which not far from fifty are enumerated in our works on ornithology. Of these there are two swans, ten geese and four varieties, twelve species of *Anatine*, or river ducks, twenty-one and several varieties of *Fuligineae*, or sea ducks, and three of *Mergine*, or fish ducks.

As a rule those species of the *Anatidae* which inhabit fresh waters are more delicate in flavor than those which frequent the sea exclusively. The flavor of any animal's flesh depends in such a great measure upon its food that it is evident that a bird which feeds to a considerable extent on vegetable food will be more toothsome than one which confines itself to a diet of fish or mollusks, and so we find that the typical sea duck, such as the genera *Clidias*, *Harlequin*, *Somateria* and others, and the fishing ducks, *Mergus*, rank very low as table birds. On the other hand, swans, geese, the *Anatine*, and many of those ducks which, though included by systematists among the *Fuligineae*, pass the greater portion or all of their time upon inland waters, are among the most highly esteemed of our food birds.

The *Anatidae*, from their aquatic habits, are warmly clad with a thick covering of feathers, which form an efficient protection against cold wet, and for these feathers they are destroyed in great numbers. During the excessively severe winter of 1874-5 Long Island Sound was frozen over, and the black ducks, which were wintering on it, were unable to obtain food in any quantity, and thus became extremely thin. At this time they were accustomed to resort in great numbers to certain warm spring holes in New Haven County, Connecticut, to pass the night and feed, and here they were slaughtered by the hundred, simply for their feathers. They were quite unfit for food, and no one having the instincts of a sportsman would have disturbed them at such a time. No one, we think, would feel disposed to criticize the action of any one who chooses to save the feathers of a bird that he

tion, that all importations of our fresh water black bass into England have been the big mouth, *Micropterus palidus*, but if these came from the Delaware River it is likely that they are the *M. salmoides*, although both species may exist in that river, yet we do not remember to have seen a "big mouth" from there. They were called *Grytes nigriceps* in *Land and Water*, *Grytes* being an obsolete name for the genus while *nigriceps* is now known as *pallidus*, the "big mouth."

APPARATUS FOR HATCHING FLOATING EGGS, SUCH AS THE COD AND MACKEREL.

A GLASS funnel, A, having a diameter of twelve or fourteen inches (larger if they can be obtained) is supported upon wooden, BB, strips four inches high in the shallow wooden trough, T. The width of this trough is equal to twice the diameter of the funnel, and the depth is six inches. It may be made of any convenient length to allow for a row of funnels. The upper end of the funnel is connected by the rubber hose, H, with a wooden siphon in the wooden tank, C, and the flow of water through the tube is regulated by the pinch cock, D. The level of the water in the tank, C, is maintained constant by an automatic cock communicating with a reservoir which is kept filled by pumping (this is not shown in the figure). The funnel being in position, and connections made, water is turned on and allowed to run until the trough, T, is full.

The funnel is now filled with confined air, which cannot escape, and which may be withdrawn either by suction

through the bent tube, L, or more readily attaching to the hose connection R, a rubber hand-pump, by means of which the air is rapidly exhausted. As the air is withdrawn the water rises in the funnel, and finally fills it and the tube connecting it with the tank. The funnel once filled with water it will remain so, and we have now only to regulate the flow so as to suit the buoyancy of the eggs to be treated.

To introduce eggs, they are placed in a shallow pan, which is completely filled, and a flat cover placed on. The pan is then sunk in the trough in front of the funnel and pushed under it and the top removed. When the eggs, by their buoyancy, will immediately rise up to the throat of the funnel, and there, meeting the descending current, will be projected down a distance determined by the size of the eggs, their buoyancy and by the strength of the descending current, which must be so regulated that none of the eggs shall pass between the lower margin of the funnel.

To remove the eggs for the purpose of working them over the water is checked off so that the eggs may crowd up into the upper part of the funnel. The tube, L, is filled with water by dipping the glass end in the tank and sucking through the other. When the tube is filled with water the rubber end is placed in the receiving pan, and the glass end carried up to the throat of the funnel, when all the eggs will be rapidly transferred through the tube, L, to the pan, where they may be examined, worked over and returned to the funnel as before.

In the case of the codfish, and probably of the mackerel, the dead eggs are sensibly heavier than the living. They may therefore be easily sorted out by so regulating the flow of the water as to throw them out of the funnel. The fish, as they hatch, will swim off with the current and be collected in the tank to themselves.

This apparatus will, I think, be found effective in hatching any eggs of sensible buoyancy. My experiments have heretofore been with artificial eggs, and with them the working small that could be desired. There is no reason to suppose that the working will be less satisfactory with the natural. The apparatus is of the simplest construction, very cheap, absolutely non-corrosive in salt water, and I respectfully commend it to the attention of our fish culturists, who have full liberty to use it.

M. McDONALD.

MAINE FISHING NOTES.—We learn from the Belfast *Journal* that on account of the failure of the French fisheries, Eastport sardines have advanced to \$2.50 per case, with the prospect of a still further advance. At Boothbay, the cod, hake and mackerel fishing has been unusually remunerative, both to fishermen and shippers. Mr. Wynnan, of Bath, has men at Lee's Island getting ready for the smelt fishery. The selectmen of Nobleboro and Newcastle are re-baiting the fish locks. They use hake sounds for currency at St. Stephen, N. B. One of them will buy a real Havana cigar or a plug of tobacco. At Grand Manan lately there was an auction sale of 10,000 lbs. of sounds, and they brought 25 cents per lb. Up to Oct. 25 there had been packed in Portland, 65,000 barrels of mackerel, against 52,000 barrels the whole year of 1879. There are no mackerel of any importance upon that market. The year has been a successful one in the catch as well as the disposal of the fish.

EGGS OF SPANISH MACKEREL, PORGEE, ANCHOVY AND OYSTER.

DURING the past week your correspondent dropped in at the Philadelphia Academy of Natural Sciences, and had the pleasure of again meeting Mr. John A. Ryder, of this institution, who has been prosecuting his observations with the United States Fish Commission at Havre de Grace during the past summer on the food of the adult and young shad. The latter information was in great part gained at the Navy Yard hatching, at Washington, D. C., respecting the growth of the roe shad. Mr. Ryder's coming report of his observations and study will be of a very interesting character, and is looked forward to with great eagerness by students of this branch of natural sciences.

While at Mobjack Bay, western shore, Chesapeake, Mr. R. commenced his work on the development of the Spanish mackerel, and he tells me he has discovered the eggs of this delicious food fish immediately after being ejected, and hatch in twenty-four hours. He succeeded in hatching them indoors in a pan of water in this time, changing the water but twice.

The eggs of the common porgie likewise float and hatch in the same space of time. The spawn of the fillo or fool fish he found were of a green color, and but 1-50th of an inch in diameter. In relating to your correspondent some of his interesting discoveries, he stated that the American anchovy's eggs, when emitted, have four minute threads attached to them, all growing from one point, which at first are tightly wrapped around the egg, but which unwind and catch on blades of grass, seaweed, etc., etc., thus tethering it, as it were, until the fish is hatched. The egg of the American anchovy, he tells me, is somewhat buoyant.

Col. MacDonald, of the Virginia Fish Commission, is getting up a machine for the hatching of the floating eggs of the cod, Spanish mackerel and porgie, which we understand is of very ingenious structure.

Mr. Ryder gave me some very interesting points from his study of the oyster while with the Maryland Fish Commission in July. In eighty-two days after being spawned young oysters were collected that had grown nearly two inches, and some that measured 2 of an inch in diameter, showing that the American variety develops much more rapidly than that of Europe.

Maj. Ferguson, of the Maryland Fish Commission, has selected a pond in a favorable locality, and intends to modify and arrange it after the French plan, for the continuing his observations and prosecuting his experiments regarding the breeding of the American oyster, and there is no doubt that what has been gained this summer will lead to perfection in what has long been looked to as a coming and valuable branch of industry. Mr. Ryder also discovered that the eggs of the roe shad develop like those of the fresh water muskell, and succeeded in impregnating the ova, after discovering by microscope and removing the male spermatozoa and female spawn in proper season. Homo.

THE FISHERIES AND FISH CULTURE OF HOLLAND.

BY favor of Mr. C. J. Bottenmae, Supt. of Fisheries of the Netherlands, we have received the report of the Netherlands sea fisheries for 1879 (Verslag van den Staat der Nederlandsche Zeevisserijen over 1879), and the report on the condition of the fisheries in the Scheldedam its tributaries for the same year (Verslag omtrent den toestand der visscherijen in de Schelde en Zeeuwsche stroomen in 1879), from which we gather the following facts: Since 1875 the herring fisheries have increased from 392 tons to 3,663 tons. The catch of edible fishes in the North Sea is not so great as in former years. Mussels are extensively "fished" for and eaten, there was received at Billingsgate market during the past year 1,456 tons from North Holland, 459 tons from South Holland and 759 tons from England; while from the British Islands and Holland there was received 2,578 tons of periwinkles.

Of 59,300 eggs of the California salmon received from Prof. Baird, U. S. Fish Commissioner, 46,000 young were planted. The salmon fishery has been good for the year named. The first-mentioned report gives interesting tables of the catch of cod and other edible fishes by the Dutch, French, German and English fishermen, as well as the numbers of each kind of fish sent to the principal markets of the different countries. The report on the Schelde gives us an account of the boat fishing for halibut, the "wiltje" (probably whitefish, *Clupea Merlangus*), the sprat, or sardine, the "harder" (*Mugil*) herring, and anchovy fisheries. The latter fishery has been very bad for the past year, and the oyster fishery, which in Holland is a large industry, has not been good.

ARKANSAS HAS A FISH COMMISSION.—We very much regret that in our annual list of Fish Commissioners it so happened that this State was left out. We gave our reason for doing it, which was that no reply to our letters had been received. As it is our intention to compile such a list annually, wholly for the benefit of the Commissioners themselves, that they may exchange reports and correspondence, we hope that as FOREST AND STREAM is the recognized medium of communication our next list will need no corrections. The fact that changes are being made in the list all the time, and so in making it up for publication we take nothing for granted, but proceed as if such a list was being made for the first time.

All who are interested in the progress of fish culture will rejoice to know that Arkansas has a commission, and that there is a prospect of their being able to do their State some benefit if the Legislature can be made to see the great importance of an addition to the supply of fish food for the people.

The following letter is explanatory: OSAGE MILLS, Ark., Oct. 29.

Editor Forest and Stream: I regret that you did not receive my response to yours of Sept. 30 in time to insert the names of the Fish Commissioners of our State in your list: they are:

Gen. N. B. Pearce, Osage Mills.  
Capt. John E. Reardon, Little Rock.  
George Hornbrook, Little Rock.

\*If we are not mistaken, the name "porgie" is applied on Chesapeake Bay, to the *Parupagus filer*, a fish called "moon fish" in New York, and "angel fish" on the Southern coast. The anchovy, *Engraulis rufatus*, is the so-called "spearing" of New York and the "silver side" of Peconic Bay.

The two latter were recently appointed to fill vacancies by Gov. W. R. Miller, and we hope to be able to get an appropriation from the Legislature, which meets in January, to enable us to do something. We will be glad to have the Commissioners of the different States send us their reports, and for this reason especially request that you insert the names of the Fish Commission of Arkansas in FOREST AND STREAM. N. B. PEARCE.

EXPORT OF TROUT OVA FROM TASMANIA.—We are indebted to the secretary of the Salmon Commissioners for the following return of trout ova sent away during the last few days:—On the 19th inst., per Tararua, 2,000 to Blenheim, New Zealand; on the 21st inst., per Tasman, 2,000 to Sydney; and on Aug. 23, per Southern Cross, 12,000 to Geelong, 2,000 to Sir Samuel Wilson, St. Kilda, and 5,000 to Adelaide. The total quantity thus supplied by the Salmon Ponds establishment is 23,000. The demand for ova is increasing. In 1877 the quantity exported was 10,500; in 1878, 10,500; in 1879, 18,000, and this year, 33,000. Any colony requiring ova should apply to the secretary about the month of April or May.—*Tasmanian Advertiser*, Aug. 28, 1880.

A TERRAPIN LAW SUGGESTED.—In commenting upon the working of the law regulating the size of lobsters to be sent to market, the New York *sun* thinks that something similar should be enacted to preserve the gelatinous terrapin from extinction. It says: "Since the excellent lobster law went into force restricting the capture of decapods less than 10 inches in length, the supply has been steady. The price has risen in New York, because the demand is ever on the increase in consequence of the increased centralization of population here. And it might be well to follow out the same plan with regard to terrapin, and restrict the capture to specimens fully six inches in length. Plenty of much smaller ones come into market, some less than four inches in length. These are not stewed, but are utilized for terrapin soup. A terrapin law would do no harm. The diamond-backed fellows from the Chesapeake fetch \$18 a dozen; those from further South are now fetching only \$10 per dozen."

THE USE OF MAGGOTS AS FISH FOOD.—A few years ago we heard a great deal of the use of maggots as food for trout fry, and most all our fish culturists regarded its use as an original discovery made by themselves, as it indeed was in one sense, but in looking over some old volumes of the *Sporting Magazine*, published in London, we find in Vol. 32, for the year 1833, pp. 42-375, it is recommended to suspend the leg of a horse or other animal over the pond and let the maggots drop. There is no doubt that much good food for fry can be got in this way from meat which is too "ripe" to be utilized in any other manner, if the pond is situated so that the odor is not offensive to those living near. The maggot is most excellent food for fish, fully as good as any other insect larva, and is perfectly clean in itself, as many other scavengers are, and even if fed to adult trout we doubt if any bad flavor would result. We were impelled to pen this paragraph to show that their use was nothing new.

THE OREGON SALMON FISHERIES.—From the annual report of the Oregon Board of Trade we learn that the salmon catch of the past spring and summer has exceeded anticipations, yielding 530,000 cases. In 1875 a catch of 335,500 cases was considered enormous; 1877 yielded 400,000 cases, and 1879 as many as 439,000 cases. This rapid increase shows the vast extent and financial value of the Oregon salmon fisheries. Of the half million and more cases packed this year, 211,522 cases were sent to San Francisco, and 239,241 cases were shipped direct to Great Britain.

ILLINOIS FISHING STORIES.—The Utica, N. Y., *Herald* says: Last week Agent Dodge went to Onondaga Lake. With trustworthy guides he made a detour of the lake and succeeded in seizing thirty-four trap nets. They are treacherous traps and give the fish no chance of escape. The captures were made in and about several points on the lake. More are buried in the water, and they will be attended to as speedily as possible. In addition to securing the nets Agent Dodge obtained the names of people who have been violating the special acts relative to fishing and hunting in and around Onondaga Lake, and they will have to answer for their work unless they make a short stop. Among the nets captured was one said to be owned by a game constable, who was elected to aid in carrying out the fish and game laws of the State. Everybody will rejoice that something is being done to protect the fish in Onondaga Lake. With their usual greed, the local fishermen in those waters had in little and big fish and leave the small ones on the shore to rot. They forget that this is virtually killing the goose that lays the golden eggs for them. If the State should stop planning fish for their benefit they might begin to realize how foolish they had been in disregarding the laws intended to benefit the public generally.

THE CATFISH.—Cleveland, O.—The extreme northern range of the catfish is, you may be about certain, Lake Erie. Here it is a gamey fish, in hard and perfect condition of flesh, not exceeding, as a rule, the weight of twenty-five pounds, although sometimes a "Daniel Lambert" is taken weighing thirty to forty-five pounds. I never saw but one of the latter size, and it was taken in the usual way some years ago, by the hook baited with liver.

The catfish here in our waters, in season, is as fine a fish when properly cooked, "in every style," as any fish caught in fresh waters. The hotel, or any other table, can palm it off for lake trout, white fish, or even black bass, as I have seen done many times. The farther South you go the larger the fish grows, the softer its flesh is, and the more it tastes of a muddy water it inhabits. A catfish in the month of May, taken in Lake Erie, and cooked in butter and baked, will satisfy the taste of any one who desires a good fish.

E. STREILING, M. D.

We are glad to see some one take up the cudgel for this fish. We are not familiar with the large ones the Doctor mentions as table fish, but the small "bullheads" (N. Y.), "catties" (Phila.), or "horn-pouts" of the Eastern States are, when of a quarter to a half-pound weight, of a high order of excellence when fried for breakfast, brook trout to the contrary notwithstanding.

FOREST AND STREAM GENERAL PASSENGER ROUND—Chicago, Nov. 2.—I would note the following persons en route to hunting grounds, over the Chicago and Northwestern Railroad: Mr. Catlin and son, Mr. Lancaster and Mr. Robinson, from Illinois, going to Section No. 17, Mich. W. H. H.

## Sea and River Fishing.

## FISH IN SEASON IN NOVEMBER.

## FRESH WATER.

Muskallonge, *Esox nubilus*.  
Pickereel, *Esox reticulatus*.  
Pike or Pickerel, *Esox lucius*.  
Pike-perch (waal-eye), pike)  
*Micropterus americanus*.  
*griseus*, etc.  
Yellow Perch, *Perca flavescens*.  
Striped Bass, *Morone americana*.  
White Bass, *Roccus chrysops*.

Black Bass, *Micropterus*. (Two species).  
Rock Bass, *Ambloplites*. (Two species).  
Wacouah, *Chenobranchius gulosus*.  
Crappie, *Pomoxys nigromaculatus*.  
Bachelor, *Pomoxys annularis*.  
Goby, *Semotilus corporalis*.

## SALT WATER.

Sea Bass, *Centropristis striata*.  
Sheepshead, *Achoerogaster probatocephalus*.  
Porgy, *Scorpaenopsis argyrops*.  
Striped Bass, *Morone lineatus*.  
White Perch, *Roccus americanus*.  
Spot, or Latoyette, *Leiostomus xanthurus*.  
Spot, Red fish, or Channel Bass, *Serphoideus ocellatus*.  
Tautog, *Tautoga onitis*.  
Walpole, *Polunius carbonarius*.  
Weakfish, *Cynoscion regalis*.

Sea Trout, *Cynoscion carolinensis*.  
Shore Whiting, *Menticirrhus littoralis*.  
Croaker, *Microgobius undulatus*.  
Bluefish, *Pomatomus saltatrix*.  
Spanish Mackerel, *Cybinus nebulosus*.  
Cero, *Cybinus regalis*.  
Boat, *Sarda pelagica*.  
Kingfish, *Menticirrhus nebulosus*.  
Snail, *Omerus noronae*.

## FISHING ON THE MATAPEDIA.

RECEIVING a pressing invitation from two of my old friends, Dr. Arthur Armstrong and Will Sutherland, well known "troutists," if I may coin the word, from Duloup, to join their party for a week's fishing, I was not long in replying in the affirmative, as I was sure of some good sport, the Doctor being thoroughly acquainted with the river, and the next day saw me at Duloup, assisting in the preparations for our excursion.

Our party consisted of the Doctor, Bill Sutherland, Colin Hetherington and self. Everything being in readiness we took the J. C. R. train to Mill Stream, where we arrived at 5 o'clock A. M. in a terrible shower of rain; but as we expected wet work we did not complain of the early commencement, and immediately got the canoe ready and embarked our camp and other utensils and proceeded up the river to McKinnon's brook and pitched our tent. It was still raining with a vengeance, and, as the bush was so uninvitingly wet, we camped on an island where was plenty of drift wood; but it was a hard job to get that tent up the island, being composed of small stones, and driving the pegs in them was a wet task.

However we got things to rights, and as I was appointed "Cuisinier" I managed by the help of a little coal oil and wet cedar to get a good fire started, by which time Colly II. managed to land about three pounds of trout, which were soon simmering with a slice of pork, and we sat to breakfast and did it ample justice. I think tea in camp is far better flavored than boarding house quality in town. I may be mistaken, but it took a gallon of tea to supply our party at meal time, and they have been in the tea trade some time. Breakfast over and things straightened up, and rods got ready, we started up the river.

Good fishing may be done in a canoe if you can only manage to anchor it, wading, and wading while the current runs at the rate of fifteen miles an hour is no easy or safe task as the Doctor found out. He only weighs 225 pounds, and when he came down plump on the end of his back, he said, as he upended himself, "I'm too round to make an anchor." We are now one mile from camp, and only one dozen fish between the Doctor and I. We retrace our track, not by water, but along the beach, and on reaching camp, Bill and Colly there before us. They went up McKinnon brook and brought back nothing but wet clothes, which they were busily engaged in drying. All hands were disgusted with the commencement of our anticipated good time, but if they lost their temper over it they did not lose their appetites, and the day's catch was again consigned to the frying pan.

Doctor said, casting his eye to the east: "Boys, we must move our tent; there will be no island here to-morrow!" And move it we did to the main bank of the river, and a beautiful spot we chose, just alongside of the railroad track, and an elevation that commanded a view of the river for a mile up and down. While the rest of the party were moving camp I made a raft, and, with the aid of some green withes and clothes-line, managed a rather cumbersome-looking vessel, but sufficiently buoyant to bear one comfortably, and which was steeper than our bark canoe. By this time it was getting dusk, and the Doctor was roaring at me to get supper ready. They had made a good fire, and I soon had their appetites appeased. It was still raining furiously, but the tent was waterproof, and, lighting our pipes, we stretched out on our blankets, while Colly got his bappies ready and we soon had the "Campbells are Coming," "Mrs. McLeod's Reel," and a host more of Scotch's favorite tunes echoing among the hills. We then fixed the fire for the night, and rolled ourselves up in our blankets and forgot our disappointment.

Breakfast over we made another trial. The Doctor was ahead of me on the raft, as when I went down for it he had possession and was anchored about half a mile above the McKinnon Falls busily whipping away with better success than yesterday, so I proceeded down below the falls and was joined by Colly and Bill. The latter had sprained his knee and was unable to walk, and we could not use the canoe as it had a hole in it, so we hauled it up to dry till it could be gummed. We were sorry for Bill as he could do very little walking, but when he saw us hooking a few two or three pounders he started to join us. They say "Tis an ill wind," etc.; so with Bill. He had not come twenty yards when he slipped, and down he went, and hardly down till up again and started for shore as if a shark was after him. When he reached the shore he felt his knee, and looked out at us. We ceased fishing to laugh. He slowly bent the knee and then straightened it out again, walked a few paces, and then started on the run to us with the exclamation, "Boys, I'll be busted, but it's all right again." The fall had, no doubt, put the snow back in its place. Well, Bill had hardly got out to us—we wait deep in a good smooth piece of water—when we saw the Doctor and his raft approaching the head of the falls at a lively gait. "He'll be over the falls as sure as fate," said

Bill, and hardly were the words uttered than we saw the Doctor lay his rod down and then lay himself alongside of it, and he, raft and all, were in the rapids over the falls and alongside of us in about as short a space of time as I take to write it.

It appears his anchor line cut and he never noticed he was drifting till too late to try and pole ashore. "Wasn't that neatly done?" said he, and we thought it was, but would not like to try it. The Doctor lost his line, hooks and all his fish by his little cruise, but hung on to his rod.

The fishing not being very good we determined to strike camp, and seeing Tom King, the master for that section, going down on his pumper" we made him wait and take our baggage down to Mill Stream and Colly and Bill went along with him leaving the Doctor and I with the canoe to go by river to join them. Doctor and I started, "but," says the Doctor, "we are not going straight through yet. I'll show you some good spots. We will try the pools at the Assamet-quaghu Bridge," and there we steered for, hauled the canoe up and tried the pools. First fish for the Doctor and a beauty of five pounds; next for me, not so large; and for two hours we were kept busy. The sky then brightened and fishing ceased, the doctor went ashore and stood on the bridge. We were fishing about one hundred yards from the foot of the bridge in still water, and I suddenly heard a shout, when I ran up the bank and shouted back to know if anything was wrong. "Come here and see trout as long as a railroad track," said he, and up I went, and it was a sight to make one wild. Just under the bridge the water is as clear as crystal and about six fathoms deep, all rock bottom; and, lying in shoals, one could see the trout without a perceptible motion, and larger ones than we had yet caught. We tried every fly, we had, but could not get a rise. I then got on a sinker and cut up a trout for bait and tried them with that. No better success, although I could see the bait alongside of their nose and rub it against their bodies. They would only give a wriggle to their tails and move out of the road. I then got around a ledge of rock out of sight, and putting on a piece of Bill Sutherland's red bankerchief, which he gave me before starting, as wings for a fly, I gave a cast and hooked my fish. The Doctor was watching the movement, and when I hooked it he got so excited, being afraid I'd lose

## MR. SCOVEL GOES A FISHING.

It was a gorgeous September afternoon, and I sat reading the *Times* under the lofty and leafy pines which grow, my friend Stover's esplanade on the upper Delaware.

Just as I was reading "Bodine's" brilliant and sparkling account of how that speckled trout had got away from him, and how "Bodine's" "lured the gentle tassel back," my mind reverted to my first day's fishing out in Indiana in Doughten's Creek, when I was sixteen years old, and O! what a joy it was to my untutored and somewhat savage mind to see the beautiful little sun-fish scattered on the bank, as I hauled them up as fast as they would bite, and as fast as I could jerk them in! If Cicero had any more exquisite delight with "histories" written at his side, than I had with my sun-fish, at least history has been silent on that subject.

The "Bodine" trout still lingered in my mind, and I said to my friend Jordan H. Stover, who has the soul of goodness in him, that if I had appropriate tackle I would tackle on the sun-fish. He told me he knew a hole down by the mill where they most did congregate, and that I might take a bass or two.

The "booming" campaign had no more joys for me for a few hours, and Jordan was soon assiduously engaged in rigging me a horse-hair line from the tail of one of his Arabian steeds, which hitherto had only voyaged to Frenchtown or led exploring parties when hitched to a hay wagon to some romantic spot like the "Singing Rocks" in the Haply Valley. Well, in one hour Jordan showed me as pretty a fishing rig as I had bought it at Kriders.

The place under the pines deserves a word. Here I have rested for three summers, with my household gods about a French (board \$7 per week). To get here you must go to Frenchtown, N. J., 25 miles above Trenton, and a line to J. C. R. Stover, at Erwinna (two miles below Frenchtown, N. J., in Bucks County, Pa.), will bring our friend Jordan with a pair of Arab colts, well bred and well trained, to meet you at any train north or south.

And I have derived so much pleasure from the FOREST AND STREAM that I feel like giving others the benefit of whatever sweet delirium can be had to all the sportsman's son with joy without utterly emptying his pockets, unless he is like that of Fortunatus or his devil which is said to have neither top nor bottom!

September and October are said to be the best months in which to catch bass, albeit my friend Major T. W. Walker, of the U. S. Army, astonished me with a four-pound bass he had caught with a silk line in the middle of August. "My luck don't run that way," said he, "some one or tucks, brass and wire, where, but when it comes to big bass and sheepshead, I am not there. For sixteen years I fished wisely and too well for the sullen sheepshead at Bonita's and in Grassy Bay and all over Albemarle Inlet and caught one a splendid time, July; year, 1861. I had him embalmed, and ever after consoled myself with dour and weak fish, and against my prowess in that direction, I yield to no superior fisher in Barreget Bay or Atlantic City, he skipper, professional fish-catcher or amateur."

But we seem to wander from our mutton.

As I sat looking proudly at my horse-hair line I thought of my lamented friend Dr. Wm. M. King, now at peace with all the world. It was scarcely a year ago when the versatile Doctor bet me the best supper the Philadelphia Club could provide—and his *cuisine* is proverbial and unexceptionable—he caught more trout with a red worm, in a May afternoon, in Broadhead's Creek, on the Delaware, Western and Lackawanna road, than the versatile Doctor did with his \$100 worth of "grizzly king" and two hundred other varieties of fly. I baited a "hass-buck," ten years' old, with a shining fly-ty-cent piece, and away we went, happy as the rose-fingered Aurora at her early bridal with the sky. My youthful traditions that a worm and a fish went together had been sorely outraged by the valiant Doctor's snarl at the "red worm." Blinker, the country boy, gathered the bait, and gaily we "troubadours" started up the valley. Never did soldier at Chantilly, amidst the red rain of the enemy's artillery, perspire more or fight harder than I did for a string of speckled trout. It was a bad day, stream low, till I had to double to reach the shady spots, and had a dozen falls with my slippery gum boots.

The witty Doctor and myself arrived at the blue-painted hostelry almost at the same moment. It was wet from top to toe, and held out at arm's length a small club he had caught with a "grizzly" fly. Blinker cautiously opened his basket and spread out twelve speckled trout, none more than six inches. The Doctor looked dazed and spoke cross words—and, alas! the brilliant Doctor died before we had the dinner at the Club, at which I and a certain naval officer, a Rabelais in wit and a Talleyrand in diplomacy, Dr. D.—, and Barnevell, and one poor poet mourned. But rest thy perturbed spirit, tired of the world—a true friend, if a bitter foe—there must be a place where thy soul can find the repose denied it here.

I started off toward the spot pointed out by Stover by the old mill. "Where the mill-wheel rolled right steadily." As I trudged along I recalled good old Izak Walton's words: "No life so happy and pleasant as the life of a well-governed angler, for when the lawyer is swallowed up with business, and the statesman is preventing or contriving plots they sit on the cowslip banks, hear the birds sing, and possess ourselves in as much quietness as these silent silver streams which we now see glide so quietly by us." Indeed, my good scholar, we may say of angling as Dr. Boteler said of strawberries:

"' Doubtless God could have made a better berry than the strawberry, but doubtless He never did, and so, if I might judge, God did never make a more calm, quiet or innocent recreation than angling."

Once at the old mill I sat me down fifteen feet above the deep hole into which the dammed up waters of the Delaware poured.

It was 4 P. M., and a grateful shade diffused itself around me. A new "Blinker" I had gathered in to find "crickets on the hearth" for bait had to be silenced with threats of effectual applications of the butt end of my pole—"Quiet reigned in Warsaw."

No sooner had the crickets touched the oozing waters than something gave a well-defined tug. Cautiously I tightened my hair-line till I could see the glistening scales of a sun-fish larger than my hand, and I said "game" fish he fought me ten minutes before I dared draw him up to my "perch."

"FYSSHYNGE WYTH AN ANGLE."

[Fac-simile of Illustration in First Edition, 1496.]

him as the place where I was standing was very bluff and barely room to move, that he got shouting that he'd go round and help me, when his feet went from him and in he went, and I was very near having to fish out more than I bargained for; but he floundered around, and at last got ashore just as I landed my six pound four ounce fish, the largest of all our catch. Doctor was delighted at my success, as he did not expect I could land him without a net; but it took some time to drown him, he fought so very hard.

We tried for over an hour at and around the same spot, but not a rise from one. We then concluded to strike camp, and about six o'clock we arrived, just in time to try Bill's cooking, which was excellent; had our after-supper smoke and wrapped ourselves in blankets.

Next day we went back to Assametquaghu bridge with the whole party and 5 P. M. saw us back to camp with a total of thirty-three dozen and odd, exclusive of what we consumed, to bring home with us and when weighed averaged three pounds six ounces. This is fine fishing on this river, but it is uncertain. As our party had decided to try Lake Malheur on our way back we struck camp next morning and took the train, but on looting over our stock of provisions we concluded to go straight through to Duloup, where we arrived at 4:30 P. M. well satisfied with our trip, although commenced under very unfavorable circumstances.

The Doctor was quite right about our first camping ground, the island, as when passing in the train where an island was three days before only water was to be seen. We had several rises from salmon grise but that was all, it was just as well, however, as they were out of season.

Quebec, Sept. 1880.

—Through the courtesy of Mr. J. W. Bouton we publish the above cut, illustrating a quaint book of which we spoke in last week's issue.

This was awkward, so I climbed down below the mill wheel, shortened my line, and with every cricket I "baggied" a noble sun-fish till I numbered twenty-five.

Alas! my bait was all gone! My beer bottle, full of crickets an hour before, was empty—dry as a powder-horn!

I was at my wit's end. No crickets, and the bait ground was nearly a mile away. The boy from the swamp was equally at a loss. He knew where a wasp-nest grew. A silver piece made his eyes stand out like saucers, and in three minutes he had the adolescent wasp-spreader for stringing on my hook. That was a new experience. Cautiously I stuck a couple of infant wasps on my little hook, and let the horse-hair flutter. What is that? Something cawing through the water like a devil-fish; but I hung bravely on to my pole, vainly endeavoring to give my line additional reach. Suddenly up darted a "monster"—a two-pound bass. Softly! Softly! He suks a little. I draw him quietly, breathlessly, lovingly toward me. Another flop. My legs dangle over the deep hole. I have nothing to hold on to. A sudden jump of the nimble bass clear out of the water. My horse-hair line gives way eight feet from the hook. I tumble into the water in my eagerness. Minding not the wet seersucker suit, I scramble out on the gravelly banks of the Delaware, and only know that my five-pound bass majestically darts down the shallow falls into which the pool empties into the deeper Delaware below, with a long line in his mouth. J. M. S.

THE BLACK BASS—*Monmouth, Illinois, Nov. 1.*—I send you to-day by express a black bass caught yesterday. Please accept with my compliments. As I have seen several communications in your paper from correspondents bragging over minnows that weigh from five to six pounds, I thought I would send you a full-grown fish. This fish when taken out of the water weighed seven pounds and five ounces (7 lbs. 5 oz.). I caught yesterday, in six hours, forty-six (46) bass that weighed one hundred and eighty pounds (180 lbs.). When any of your friends that are good fellows wish to catch big bass, and lots of them, call on me and I will show them where they can do so free of charge.

Yours, etc., FRED. A. ALLEN.  
The fish came in good order. Thanks. It proved to be a "big mouth," *Micropterus salmoides*.

AN ENCYCLED HOOK—*Mill Springs, Ky., Nov. 1880.*—Recent mention of the succulation of a hook in a fish recalls a circumstance which occurred to the FOREST AND STREAM four or five years ago. "Old Olin" (a fisherman), then one of Stantley's experts or "professors," with a Frankfort reel landed a six or seven pound pike near Livingston, on Rock Castle River, in the fall, and was superintending the dressing of his fish when a prominence about the middle of a side attracted his attention, and proved to have been caused by a well preserved hook and fragment of a line attached. On investigation he learned that his neighbor "Dilsey," who is quite sensitive to the charge of "slathering"—Dilse does slather fearfully sometimes—had claimed to have had his line broken at the same point by a whale the previous spring, and when "Olin" exhibited them in Dilsey's presence he immediately recognized them, and located their loss without prompting.

## Game Bag and Gun.

### GAME IN SEASON IN NOVEMBER.

**Monk.** *Am. americana.*  
**Carlin.** *Boomer carlin.*  
**Fil.** *Carlin.*  
**Red or Virginia duck.** *C. virginiana.*  
**Sparrow.** red, black and gray.  
**Hares—brown and gray.**  
**Red or red bird.** *Dolichonyx oryzivorus.*  
**Wild Turkey.** *Meleagris gallopavo.*  
**Pinnated grouse or prairie chicken.** *Cyrtonyx montezumae.*  
**Ruffed grouse or bluebird.** *Turdus rufitorques.*  
**Quail or partridge.** *Oryzopsis elegans.*  
**Sora, rail.** *Porzana carolina.*  
Many birds' generally, including various species of plover, sandpiper, curlew, golden-crowned kinglet, bluebirds, starlings, etc., come under the group *Limicola*, or shore birds. Many States permit prairie fowl (pinnated grouse) shooting after Aug. 15.

**Woodcock.** *Philohela minor.*  
**Black-bellied plover.** *Actitis macularia.*  
**Turnstone.** *Actitis macularia.*  
**Long-billed curlew.** *Scolopax longirostris.*  
**Golden-crowned kinglet.** *Regulus satrapa.*  
**Red-breasted snipe.** *Dolichonyx oryzivorus.*  
**Red-backed sandpiper.** *Actitis macularia.*  
**Tringa americana.  
**White-throated sparrow.** *Spizella monticola.*  
**Yellow-shank.** *Tringa striata.***

### NOVEMBER SHOOTING GROUNDS.

#### QUAIL IN MARYLAND, VIRGINIA AND NORTH CAROLINA.

IN previous letters to the FOREST AND STREAM I have called the attention of sportsmen to the advantages of the National Capital as a place of rendezvous for those desiring good shooting. Of late years a trip to the West has been deemed the correct thing to do. The fond of the pursuit of wild fowl or game birds. That there is a great abundance of game in the West and North in the East cannot be denied. I think, however, that sportsmen of the East, who have made the Western trip, will concede that their success in the lake regions and upon the prairies depends in great measure upon the character of the men into whose hands they fall when the hunting grounds are reached. One must know where game can be found in the West as well as in the East if good sport is to be enjoyed.

The question of expense is a vital element in the calculations of a vast majority of sportsmen. The gentleman who takes his vacation in the frosty days of October and November, upon the stubblefields or woodlands, must be able to reckon the cost of his amusement quite as accurately as he who lounges upon the beach at Newport or in the hotels at Saratoga during the sweltering mid-summer time.

There are field sports which can only be enjoyed by the rich sportsman who can afford to go beyond the reach of the ordinary mortal who loves a dog and gun as the elevated attractions of the Newport Polo Club or beyond the hunting aspirations of the youth who rides a stiff back at a country tournament. The successful bumpkin who crowns his sweet-heart Queen of Beauty at the country fair may enjoy himself vastly more, however, than who drives the ball beyond his opponent's goal in the presence of the congregated belles of New York and Boston. The poverty-stricken sportsman, who kills a dozen ducks from an inexpensive blind at some good point on the Potomac, in like manner may enjoy his shooting vastly more than he who pays a Havre de Grace

professional \$40 per day to equip him with decoys, sink boxes and assistants for the destruction of innumerable canvas backs. Western shooting is an expensive luxury for Eastern sportsmen. If there was no game in the East there would be an excellent reason for going a thousand miles westward to find it. There is, however, magnificent sport to be obtained near home.

There never was a time when game birds were well protected in Maryland, Virginia and North Carolina as at present.

The quail, or partridge as the bird is generally designated in the South, is increasing in numbers. "Bob White" thrives best in the prosperous agricultural communities. It appears to follow civilization.

Quail shooting and chicken shooting cannot, in my estimation, be compared. If a man is shooting for results in bulk he will undoubtedly enjoy prairie shooting best. A chicken weighs more than a quail. On the 15th of August a chicken will rise as heavily as a crow, and is about as easy to kill as an eagle. The hunter stands upon a vast expanse of level ground. There is nothing to hinder him in the swiftness of the prospect. After 8 o'clock in the morning the sun beats down with paralyzing effect. His shooting is virtually at an end until the shades of evening begin to fall. How different is quail shooting! There is first the accessory of a beautiful landscape. Hills, trees, water, and an infinite variety of natural colors. The air is sharp and invigorating. The hunter must exercise more ingenuity in the pursuit of the game. To be successful he must first follow his dogs closely. When the covey is found and there must shoot rapidly and well to kill the birds. There is nothing slow about the quail. He is active and cunning under all circumstances. There are pleasant surprises almost always in store for the quail hunter. Following a covey into thick bottom he often stumbles upon a brace of woodcock. Not thin, puny July woodcock either, but large, strong fat birds, oftentimes heavier than the fattest quail in the bag. Again, driving a covey into a marsh, the dogs may stand a stray jack-snipe whose presence in your bag adds greatly to his attractiveness of the contents. Now he is a ruffed grouse will dart with the speed of an arrow from the clump of hard bushes in which you expected to find one of the scattered coveys. If you kill the noble bird it will be a pleasure to boast of the feat when you sit down to a hearty dinner at the farm-house where you are stopping.

I shall not pretend to direct sportsmen to the exact localities where quail in abundance can be found. I know there are more birds in Maryland, Virginia and North Carolina this fall than in any previous season for many years past. It has been the general experience of Washington sportsmen that the greatest number of birds could be found near Tidewater. Senator Vance, of North Carolina, recently informed a friend that there were "partridges" by the thousands in the northeastern corner of the State. Albemarle and Currituck Sounds, with their tributary rivers, inlets and creeks, were the counties of Currituck, Camden, Pasquotank, Perquimans, Gates, Hertford, Chowan, Washington and Tyrrell. In Virginia, birds are numerous in the bottoms of the Potomac, Rappahannock, York and James rivers. Besides the quail shooting dog ducking and the obtained upon one of these streams. There are plenty of birds inland also. If reports received of this nature are true, but I believe tide-water shooting to be more satisfactory. Besides the variety of sport, the cover is not so dense as on the mountain uplands.

The general State law of Virginia prohibits the killing of quail before November 1, although in some of the upland counties the season begins October 15. A general State law also protects every land owner's property from trespass, and farmers are not compelled to post their lands to derive the benefit of the law. In the most part the most are kindly and courteous, and a gentleman very rarely is refused permission to shoot upon their lands. Board can be obtained at farm-houses from \$4 to \$7 per week and at the village hotels from \$6 to \$10 per week.

Quail are more abundant in Maryland than for many seasons past. The Baltimore Sun of a recent date says: "This abundance several circumstances have combined to effect. Last fall the weather was so dry that the birds were found with extreme difficulty, even by the best of dogs, and much larger numbers than usual were secured. The succeeding winter was mild and the breeding season just past an excellent one, so no damage was done to old or young birds by natural elements, and the plentifulness of this fine bird resulting is generally remarked. The Messina quail brought to this country and turned out in the vicinity of Baltimore bred well last year, returned from their annual travels south and bred on the same grounds this year, and promise to be a decided acquisition."

The general Virginia State law prohibits the killing of quail before Nov. 1, but many of the counties have passed local laws on the subject to which the general State law does not apply. In the following named counties the season opens Oct. 15: Alleghany, Harford, Montgomery, Frederick and Talbot. The season opens Oct. 10 in Anne Arundel and Prince Georges; on the 20th in Queen Anne and Washington. The general State law closes the season Dec. 24, but in some of the counties the season is extended to a later date. Rabbit shooting is permissible after Oct. 15. In Queen Anne County persons desiring to shoot wild fowl from sink-boxes must pay a \$10 license fee. No wild fowl can be killed in Worcester County before Nov. 1.

There has been magnificent rail shooting on the marshes along the Patuxent and Potomac rivers since the 1st of September. At the last session of the Maryland Legislature the following law was enacted: "No person but a resident of Anne Arundel, Prince George's, St. Mary's, Charles and Calvert counties shall shoot or trap any water-fowl, snipe or other birds within the Patuxent River, its tributaries or marshes adjacent. Fine for first offense, not less than \$10 nor more than \$50; second offense, not less than \$25 nor more than \$100." The fool killer could not have been in Annapolis when this law was passed. If he had been members of the Maryland Legislature would have suffered. State Senator Hill, of Prince George's County, who owns 1,200 acres of marsh on the Patuxent, at Hill's Landing below Marlborough, was sick when this prohibitory law was passed. He is indignant at the action of the Legislature, and has, I understand, invited friends from Baltimore and Washington to gun upon his marshes, telling them that he would protect them from the consequences. The law is really a dead letter. Sportsmen residing in neighborhoods outside of the counties named in the act have gunned upon the Patuxent marshes during the past month unmolested by the authorities. Ortolan or rail have been plentiful. Three gentlemen killed 807 ortolan, and sixteen blue wing teal on the half tides recently. Your correspondent and a friend killed 204 birds on one tide last week. We found the teal very scarce, only two being killed.

Washington, D. C., Oct. 1880.

### PASS SHOOTING IN MINNESOTA.

I REACHED Sauk Centre on the morning of Friday, October 8, at 1:18, where, at the depot, I found my friend, Mr. B., awaiting me, and within ten minutes we were placed at his door. The next morning preparations were begun early; our guns were brought out of their cases; flannel rags and oil were in demand. Such bustling activity brought forth derisive and sarcastic remarks from the ladies who were regarded the more astute subject of millinery and dresses. Bless their dear hearts! I wonder if the ladies were really take as much pleasure in seeing the sterner sex become boys again—if not in age and stature, at least in spirits and enthusiasm—as we do when preparing for a shooting trip. I believe they do.

In the afternoon we were secluding along at a good bait over the rolling prairie in a comfortable two-seat wagon, drawn by a team of large horses—good travelers—the property of a neighbor who accompanied us.

Our personal and outfit comprised the following, to wit: Four adults, two dogs (one pointer and the other a water spaniel, formerly the property of Col. Gilderesque of this city), four breech-loaders, ammunition enough to last, buffalo robes, and last, but not least, plenty of lunch.

We had not gone more than two or three miles when Mr. B. asked to stop a few minutes, as he fancied we could have a shot at some ducks. I looked all about me and could see nothing. The ducks were not in the air, but I was informed there might be some over the fence in that hole, hidden from view by a few trees not many rods from a comfortable looking farm-house. Climbing over the fence, and cautioned to be careful, I crawled as slowly and circumspectly as it was possible for one weighing 192 pounds through the tall, rank grass growing in thick profusion about the edges of the slough, risking wet knees and muddy hands.

Laborious though the work was I felt the labor was worth all the pains, for, carefully raising our heads, we were rewarded by seeing a bunch of mallards fully ten rods off, feeding quietly on the wild rice that grows in almost every hole about the prairie; and, while our eyes were made glad by the sight, I could not help admiring the intelligent actions of the waterfowl. Nero, who, without a word from us, had leaped from the wagon the moment we did, and crawled as carefully through the grass as though he intuitively knew what was necessary. Starting the flock up, we each secured one apiece, and Nero retrieved them; but, so eager had he been, his excited nature could not restrain him from "chawing" one up rather badly.

We joined the wagon farther down the road, feeling we had made a good commencement.

We spent the night at a farm-house, and roused up early the next morning, the other two of our party, who went out on the farm to dig holes for a shoot at any game, as we had word from the farmer that there were plenty about his farm, and who laughed at the hole digging, and "guessed he'd never get a goose if he had to dig a hole for them; it was too hard work." But the others persisted, and were rewarded by getting a pair of "honkers."

Fortune smiled not upon us, the other members of the quartette, though we carefully hid ourselves along the fence where the grass grew high, not 25 yards from the plowed field, where the previous afternoon we were around a big bunch of geese. Our short-run decoys, though placed in a most alluring way, failed to act as a charm.

In regard to the wild goose shooting on the prairie, I consider the best way to procure a big bag is to have live decoys, and there is no telling what fine sport one could have. The weather had been and was still very warm; no rain had fallen for six or eight weeks, and all birds were very cautious.

We left the farm-house after breakfast for the Westport Pass, mentioned by "Deil" in his last letter to you, and there we had some sport.

Along a ridge that originally was the work of beavers years ago we distributed ourselves, screening our forms carefully from the gaze of the watchful ducks as they flew over in passing from one lake to the other. Some good shots were made.

Pass-shooting is exciting sport, particularly when the birds are stirring about. A low whistle from one of the party is the signal for attention, or the exclamation, "Mark! north; mark! south," puts you on the *qui vive*, and I consider no more exhilarating sport can be had than this kind of shooting. The two dogs were kept busy, and demands for fire, and Nero were constant, and after two hours' shooting we secured our ducks, quite satisfied with the morning's sport.

Leisurely and heartily eating our lunch, we were refreshed sufficiently to seek fields and pastures new, and, driving toward home across the "breaking," a term applied to a tract plowed for the first time, came to one farm, where 50 rods off we saw a very large bunch of geese, and farther on a great regiment of sand-hill cranes, which with necks erect and motions looked like soldiers on dress parade. They took the alarm, however, and soon flew out of sight.

Concluding that we might get some shots at their return, we made our preparations to receive them.

Our dinner had strengthened us for hole-digging, and we soon had our pits dug, but the canned corned beef and dust had combined to make me so thirsty that I walked a mile for a drink of water.

Our laborious work was only rewarded by getting three sandhill cranes, and as we had some twelve or fourteen miles to drive home reaching home we filled up the holes, and drove back to town looking like old pros, and as the farm recently plowed had blown into our eyes, ears and noses, and we were sorry looking white men, judging from the ejaculations of our respective wives.

I subsequently had my first taste of crane, and I confess the flesh is as good eating as wild turkey.

Our next expedition was in another direction toward Birch Bark Lake, where for an hour before sunset we had a lively scrimmage with the mallard and teal.

A strong visit to this lake—without much and present a beautifully picturesque scene in mid-afternoon, and from whose translucent depths of eighty feet great pike, pickerel and fabulously large black bass can be taken—would marvel at the immense flocks of "mud hens" or "hen bills" called downcast "pool dogs," that blacken the surface. These birds are not considered game, and are undisturbed by the sportsman; in fact, they seem to understand they are free from molestation, and oftentimes approach within easy gun shot, and the veriest novice could kill a dozen at one discharge.

We stopped all night at a cabin on the shore of the lake, and the proprietor, an old Irishman, assured us that he believed he had exterminated the fleas, gave us his only bed to sleep on. At 4 the next morning he arose, built the fire, cooked about a peck of potatoes, ground before our eyes the coffee beans which he had apparently saved for some grand occasion such as this, (the receptacle containing the

openly from one end of the train to the other. By examining those birds any shooter will see at a glance that they are the traps and birds. There have come to a very low standard, and the snarers have become very bold indeed, when to let you shoot on their lands the farmers will exact from the shooter before he begins the promise not to touch their snarers. I say, stop the employees of those railroads in the sale of those trapped birds, and the farmers and their boys will of their own free will stop snaring, as it will not pay them to send to the city one or two birds at a time. Before the first of November we all heard of the large quantities of quail were not, but when the season came those large quantities were not to be found—they had disappeared. Before the six weeks ago had from twelve to fifteen birds each did not have one-half of that number on the first of this month. What had become of them? The farmers themselves will tell you, very innocently, that they guess that their boys have been snaring them. A TRUE LOVER OF THE SPORT.

**LARGE GAME IN NEW YORK.**—The *New York Times* has the following correspondence from Monticello, N. Y.: "The hunters and trappers find both game and success in the portions of Sullivan, Delaware, Ulster and Greene Counties that are still in a condition almost as primitive as they were when the Indians held possession of the region. They are now out in full force, seeking their favorite game, which, from the timid rabbit to the fierce bear, has not been more plenty for many seasons. The mountains of northern Ulster and the lower part of Greene, and the rocky hills of Never-hink and Rockland Townships, in Sullivan County, are the chosen resorts of the bear hunter, while the ridges approaching the Delaware boundary of the latter county, and the prelooming or holding on their crests many of the lakes that abound in the county, are sought by the lover of the deer chase. Scores of sportsmen from New York City have engaged quarters at the well known backwoods retreats that exist only for the accommodation of hunters, and now that the election is over an influx of this class of sportsmen is daily expected. Monticello is the centre of a famous deer, bear and partridge region, and as the accommodations here in the way of quarters, dogs, guns and guides are everything that can be asked for, the number of guests to a drive of eight or ten miles to reach the hunting grounds, and many sportsmen remain here for the season rather than seek the taverns in the very midst of the ridges, swamps and swails. 'Dave' Avery, of the Mansion House, of this village, is a crack shot with both rifle and shot-gun, knows every inch of the woods, and is always ready to go after a deer, bear, fox or wild cat, as the choice of a visiting sportsman may be. Hunters in the Upper Delaware region may have an opportunity this fall to encounter game that only the mild residents of the county remember hunting. There are well-founded reports that a panther has made his appearance in the woods along the Beaver Kill. Catamounts have not been so numerous and bold for years, and the dreaded lynx has made its presence known in the Black Lake region. The appearance of these animals, all deadly enemies of the deer, is certain evidence that their prey is here in unusual numbers this season."

**PATTERNS TESTS.**—It is impossible to fix upon any one pattern as a standard by which to gauge the shooting qualities of individual guns, because of so wide a diversity in the degree of choke. We have therefore selected the two extremes, a cylinder bore and a very full chokebore, and give below such patterns as good guns of each class should make. Between the two limits of 110 for cylinder and 240 for extreme choke most of our readers will probably find their records to accord with the divergence of their guns from these two bores.

Cylinder bore gun loaded with 14 oz. No. 7 shot should put 110 pellets into a 30-inch circle at 40 yards.

An extreme chokebore gun, loaded with 14 oz. of No. 7 shot should put 240 pellets into a 30-inch circle at 40 yards.

A good choke bore, such as we prefer for general shooting, should put between 180 and 200 pellets into the same circle under the same conditions.

The patterns given above are with the following charges of powder.

TWELVE BORE.				TEN BORE.			
6 1/2 lbs. to 10 lbs.	... 3/4 dr. to 10 dr.	7 1/2 lbs. to 10 lbs.	... 10 dr. to 10 dr.	4 1/2 lbs. to 6 lbs.	... 10 dr. to 10 dr.	4 1/2 lbs. to 6 lbs.	... 10 dr. to 10 dr.
7 1/2 lbs. to 10 lbs.	... 3/4 dr. to 10 dr.	8 1/2 lbs. to 10 lbs.	... 3/4 dr. to 10 dr.	5 1/2 lbs. to 8 lbs.	... 10 dr. to 10 dr.	5 1/2 lbs. to 8 lbs.	... 10 dr. to 10 dr.
8 1/2 lbs. to 10 lbs.	... 3/4 dr. to 10 dr.	9 1/2 lbs. to 10 lbs.	... 3/4 dr. to 10 dr.	6 1/2 lbs. to 8 lbs.	... 10 dr. to 10 dr.	6 1/2 lbs. to 8 lbs.	... 10 dr. to 10 dr.

**THE GAME LAWS IN MAINE.**—The following letters came to us in the same mail. We publish them together. The letter signed "Bangor" is the best possible comment upon Mr. Smith's plea that the demands upon the Commissioners are beyond their ability to meet, and that plea is the best possible answer to "Bangor's" complaint. Perhaps by another year the people of Maine may be encouraged by the good already done to increase the appropriation and enlarge the facilities for coping with the work.

**MORAN LAXE, M. E., Nov. 7.**—*Editor Forest and Stream:*—We have been very much interested in reading the letter which you have published, and we should highly esteem it the utmost extent of our power and resources these laws against all parties, whether guides or principals, who shall be guilty of their infraction.—E. M. Stillwell, Commissioner of Fisheries and Game, in last week's issue of FOREST AND STREAM.

These are brave words, but of what avail unless backed by action? These utterances only excite laughter and ridicule among the constant violators of the law, knowing as they do that nothing will be done to punish them. Why, right in the Commissioner's own city there are men who will resort to every fall to the Lakes in Washington County to hunt and butcher deer, and this season finds them pursuing their nefarious practices with a greater boldness, born of past immunity. More than three weeks ago a responsible person living near the scenes of the law's violation wrote to Commissioner Stillwell and his colleague to that effect, yet neither officer has put in an appearance nor sent a deputy to arrest the parties; so the slaughter continues and will continue till the deer are exterminated, unless some steps are appointed who will do something more than fire paper pellets. Some idea of the slaughter can be formed from the fact that twice a week a team goes in from Bangor (five miles distant) to the vicinity of Mopang and Pleasant Lakes and takes out the venison in the night, carrying it to Milbridge for shipment. Then there are parties at Rocky and Lead Mountain Ponds and Alligator Lake in the same business. The still hunters are doing what they can shooting hounds. Two have already been shot by parties of thirty-five Brook and at Gray and Adams camp. No conclusion would ask the Commissioners of Fisheries and Game, what are you going to do about it? BANGOR.

**STATE OF MAINE.—DEPARTMENT OF FISHERIES AND GAME.—Portland, Nov. 8.**—*Editor Forest and Stream:* As an executive officer, I am opposed to this constant "tinkering" by special legislation, etc.—attempts to better the form of laws, at the expense of lessening their practical force. We are devoting our personal efforts and energies as commissioners to the enforcement of the good laws that we have, and devote our whole time to the work. We now have added to our duties the enforcement of the game laws. With the extensive territory and limited means that we have our work is a mountain before us. You will learn from our forthcoming report for 1880 that we have not been idle for a moment. With an uncertain appropriation of funds to depend upon, and a meagre one at the best. We have a great territory abounding with large rivers and lakes and extensive forests that yield abundantly of fish and game. You have in New York State no less than four officers at the head of the Department of Fisheries, and eight to execute the game laws. The work of those twelve gentlemen devolves upon two in Maine, and we receive a salary just equal to one of your game officers—utterly inadequate as a compensation for our time and work. The work of restoring our rivers and lakes to their natural culture, the construction of fishways and protection, and of enforcing all our fish and game laws, etc., etc., we are prosecuting with our utmost zeal and energy. I believe that the practical results in Maine are, beyond cavil, unprecedented in the United States or Europe. Our report for 1880, will be issued in January. EYKRETT SMITH.

**TENNESSEE MOUNTAINEERS.**—Thomas Hughes has been down to Tennessee to found a colony, and this is what he has to say of the mountaineers of that country: "Most of these mountaineers, but not all of them, own a log cabin and a minute patch of corn round it, probably also a few pigs and chickens, but seem to have no desire to make any effort at further clearing, and quite content to live from hand to mouth. They cannot do that without hiring themselves out when they get a chance, but are most uncertain and exasperating laborers. In the first place, though able to stand great fatigue in hunting and perfectly indifferent to weather, they are not physically so strong as average English or Northern men. Then they are never to be relied on for a job. As soon as one of them has earned three or four dollars he will probably want a hunt, and go off for it then and there, spend a dollar on powder and shot, and these on squirrels and opossums, whose skins may possibly bring him in ten cents in his week's earnings."

**BERKSHIRE COUNTY.—Stockbridge, Mass., Nov. 5.**—Owing to the swamps and low lands being so very dry this season woodcock were scarce compared to what they usually are. Ruffed grouse about the usual number, but are to be found more in marshy tracts than in their usual haunts on the hills. Ducks at times common, shooting in small numbers, and mostly black duck (*A. obscura*). The beautiful woodcock breed in this section quite common. Rabbits abundant, grey squirrels common, and in some of our neighboring hills quite plentiful.

It has always been a very rare thing to see or hear quail in this section, but this last season they have been quite common, especially in the spring and summer. Their genial cry of Bob White could be heard every day in different parts of our township.

Our game laws are well kept of late years. Were it not so with our game number of hunters and fishermen our game and fish would soon be annihilated. R. C. M.

**AN UNUSUAL BAG.—Pleasant, N. Y., Nov. 5.**—Mr. Eugene Depew and myself bagged yesterday in this county within forty miles of New York thirty-seven quail, all fine, full-grown birds. All shot over my Irish bitch "Gussie," and all but two were shot over points. W. H. PRIER.

**FLORIDA ORANGE GROWERS.—New York City, Oct. 26.**—*Editor Forest and Stream:* Could you kindly put a couple of young men in communication with any of your numerous contributors to the FOREST AND STREAM in regard to orange growing in Florida? We have read with interest the valuable work entitled "Camp life in Florida," but the book scarcely meets our wants; we should like fuller information as to the prospects of orange growing, and to know of the most suitable lands, also State Laws relating to purchase or otherwise. R. F. W.

**CAMBRIDGE.—Oct.**—Will you please answer through your valuable columns the following questions: What are the prospects of a young man going to Florida, to engage in the orange business? What part of the State is best adapted to the business in regard to healthfulness and profit? How long before one begins to realize any profit from the business? What is the amount of capital required to start with? What time of year is best to begin? Is there any book that gives reliable information on the subject? Please answer as soon as space will permit and oblige. FLORIDA.

Will some one of our Florida correspondents—not one who has a grove to sell—give us some facts on this point?

**CANADA GOOSE.—Whitstone, L. I., Nov. 8.**—While "sailing" ducks election day on Long Island Sound near this village, I came upon a Canada goose which, evidently tired from a long flight, was resting on the water. It allowed me to approach within about fifty yards before rising, and it had not got far when an ounce and a quarter of "B" shot overtook it and proved too heavy a load to carry. Before dressing it weighed 9 1/2 lbs. How does that compare with the average? Occasionally geese are seen flying over here in the fall, but shooting one is a very rare occurrence. My "bag" for the day consisted of, besides the goose, three ducks. TIM. BERKDOOLE.

The bird killed by our correspondent was of about the average weight.

**A CURIOSITY.**—The large gun which is elsewhere offered for sale by Mr. Wm. R. Schaefer, of Boston, has a history, and we are glad to be able to chronicle its purchase to the gun along with it. If we remember rightly, this small cannon was imported for use on Chesapeake Bay, but its terrific echoes awoke the righteous wrath of the sportsmen of that region, and the gun was incontinently stormed, captured and sent out of the country. Eventually it found its way to the Hub, and has there long been an object of open-mouthed wonder to the modern Athenians. If some of our wild-goose-plugged friends of the Pacific Coast want to preserve their crops we would recommend Mr. Schaefer's punt gun. The great punt would make an interesting ornament for a gun club room.

**MARYLAND.—Dorsey, Del., Nov. 4.**—W. G. Smith, trapper at K-9 Kennels, has just returned from a ten-days' hunt in Queen Anne County, Md. He reports an abundance of quails and a good number of woodcocks. Knowing the country as he does we are not surprised at his success in finding so many of the latter. For comrades and co-workers he had "Lothair," of Orange Valley, N. J., and "Fritz," of Cumberland, Md. Owing to an unusually large crop of acorns, among which is the pin oak variety, a choice article of food, quail were found more frequently in the woods than in the open. The rain which is now commencing may drive them out to feed. E. V. C.

**HAMMERLESS GUNS.—Boston, Nov. 4.**—I am about to purchase a fine breech loading shot gun, ten pounds, ten gauge, but an undecided whether to get one with or without hammerless. The mechanism of the hammerless seems simple and strong, and easier to keep free from rust, but I have never seen one in use, and do not know how they are liked. Again the action bed seems short on all that I have seen, and I should think they would be liable to get shaky. What do you think of them? Will some of the readers of FOREST AND STREAM who are using the hammerless give me their opinion of them through your columns? A. B. C.

We should be pleased to hear from those who have used the hammerless gun.

**OHIO QUAIL SHOOTING.—Wauseon, O., Nov. 3.**—I think your correspondents are mistaken when they assert that in Ohio quail cannot be killed before Nov. 15. The law of 1870 to which they refer was passed prior to the code. The code superseded—codified all laws in force January 1, 1880. Our game law in the code supersedes the law of 1870, and repeals that law by implication. If the law of 1870 is in force, then, after Nov. 15, then there is no close season, and quail may be killed all the year round as that law contains no prohibition after that date. The judge of our courts concurs with me in this view.

Quail shooting is fair, and some woodcock yet linger with us. H.

**SPORT ABOUT NEWARK.**—A local paper thus sums up the reports of the opening of the New Jersey game season there. There were four almost and in large bodies, the birds well-grown and strong of wing. Quite a number of reports were reported in Essex and Union counties. Two gentlemen from this city killed a dozen on Tuesday between Elizabeth and Roselle, and said that they left plenty for breeding purposes. The grouse were unusually plenty in their mountain haunts. Woodcock are very scarce and no good bags have been heard of this fall, but the prospects are that the recent rains and mild weather may yet furnish some sport with these highly prized birds. Rabbits, our only ground game, have here out the promise held by the favorable season as they were not found to be any more plentiful than usual.

**AN EARNEST WORKER.—New York, Nov. 1.**—*Editor Forest and Stream:* The readers of FOREST AND STREAM will have noticed the article in your issue of Oct. 28, by W. Holberton, on "Sabbath Marauders" at Pascack, N. J. This is by no means the first evidence brought to my notice that Mr. H. is interesting himself to prevent the illegal depletion of game in this section of his vicinity. We have plenty of sportsmen who have time and money to spare for association, and expended in regular meetings, big tag, trap-shooting, grand supports, etc., etc., but here is a man disposed to do it little actual work. I hope that not sportsmen alone, but all who feel an interest in the preservation of the feathered tribe in this section from the mercenary and wicked assaults of pot hunters and wanton butchers will lend him a hand. And as "fine words butter no parsnips," let that hand transmit a \$5 note for his campaign fund. H. H. THOMPSON.

**QUAIL IN NEW JERSEY.—New York, Nov. 5.**—Our efforts to stop shooting at Pascack, N. J., before the law was off were entirely successful, and the parties have not put in an appearance since. I regret to say, though, that during two days' shooting (Nov. 1 and 2) in Jersey, I heard but one story from farmers and others, and that was that there had been quail shooting going on for two weeks before the 1st. The wildness of the quail and small size of the beaves amply proved this fact. Some beaves would not let the dogs come within twenty yards of them. They were quite plenty early in the season, but the "woodcock shooting" thinned them out, so that there are not enough left at this early day to make it worth while going after them. W. HOLBERTON.

**QUAIL IN INDIANA.—Coeledeale, Nov. 5.**—Our prospects for small game—the only kind which we have—are indeed flattering. Quail were perhaps never so plenty. The season this year was particularly suited to them, being dry during their nesting and hatching time, and they are now well grown, strong and ready for dog and gun. Although our law has been off for a few days, I have as yet to see my first dead quail; nor have I heard any shooting. By rising about day-light any morning, I can course perhaps a dozen covies by their calling, and have in the last few days seen two or three covies a hundred yards of the house. I know of no place in Central Indiana where devotees of the gun can secure so good sport as here. Should sportsmen from abroad desire to make a call we will do everything we can to make their stay pleasant and insure plenty of sport. Water-fowl have as yet given us the go-by, but they tarry long when they do come. Black bass, since the cool days have set in, have been doing good work taking the minnow, for you must know that the fly is as yet unknown. LA BELLE.

**THE BLAIR COUNTY METHOD.**—A young man in Blair County, Pennsylvania, has discovered an ingenious and successful way to capture squirrels, dead or alive, without either gun or ammunition. His outfit consists of a set of climbers, such as are used by telegraph repairers, a sheath knife, a pack of fire-crackers, box of matches and a dog. The dog holds the game. The young man puts on his climbers, and goes up to the hole in the tree, lights a fire-cracker and drops it into the hole. When it explodes, the frightened squirrel rushes out into a bag held over the hole, or if he wishes to kill it he strikes its head off with the sheath knife; if he misses, the dog soon finishes it. By this novel contrivance he often brings in from ten to twenty squirrels a day. Large game is captured in the same way.—E.

**CONNECTICUT.—Putnam, Nov. 6.**—Sportsmen of this section (Windham County) report quail and woodcock more plenty since the light rains, and it is considered good timber, at this time, especially in the runs and small timber.

The hunting of hares does not compel one to take long walks through thick bushes, which New England bird-shooters have to take, but one can take his little pack into ground

where hares live, and sit down on some log or stump commanding a runway and listen to the industrious little hounds until their near approach warns him to be on guard and not let the little quarry steal by unseen and unshot at.

The writer is fortunate in having both varieties of the hare within easy reach, and they can be hunted in winter when pointer and setter are useless; and many a day the coming winter will my pack of beagles make the woods ring with their noise as they follow the great white hare in his ghost-like flight.

N. ELWOOD.

## THE CARE OF DOGS.

### CHAPTER II.

HAVING provided a proper kennel, and indicated the general arrangement of its occupants, let us give them a "square meal."

Certainly everybody knows just what is best, and four individuals out of five will disagree as to bill of fare. How is that? Just this way. No. 1 keeps a dog, No. 2, a brace, No. 3, four or five, and No. 4, twenty or thirty. No. 1 advocates table scraps; No. 2, Spratt's biscuit, with milk, or soup made of bones from the butcher's shop; No. 3, oatmeal alternated with wholemeal and corn meal mush; No. 4, corn meal mush, with meat and vegetable soup occasionally. All are well enough in their places, but is it not evident that each man speaks for his own particular case, without thought of the difference between it and the others. Would it not seem ridiculous to tell a man to feed his stock of twenty dogs on table scraps or Spratt's biscuits exclusively?

I take for my starting point a kennel of from sixteen to twenty, because you will get my experience with a kennel of twenty as healthily and fine-looking dogs as one would care to see (twenty is the average number, dogs coming and going continually), out of which I have not lost a single dog this year, nor is there a sick one on the place at time of writing (Nov. 3, 1880).

In feeding dogs it is an advantage to change the food quite often, thereby giving a relish and keeping up good appetites; always bearing in mind that in most cases food can be made to answer the purpose of medicines.

Mush once or twice a week in warm weather, remembering not to cook at one time more than enough to feed twice, as it soon begins to ferment unless kept in a refrigerator. A good mush for all seasons, but especially for summer, is made as follows:

1 beef head or 2 large beef shins, 2 heads of cabbage, or 1 peck of turnip or potatoes, 5 onions, 1 teacupful of salt, 1 ounce black pepper. Cut the vegetables into fine pieces, remove as much meat as possible from the bones, chop it fine and crack the bone. Throw all into an iron kettle and add 7 buckets (8 quarts) of water. Boil one hour and remove the bones. Thicken to the consistency of cold soft soap with the following mixture: Corn meal 1 bushel, oat meal 1 peck, wheat bran 2 pecks. Stir in while the soup is boiling and let it continue to boil three hours longer. Do not let it scorch. Feed cold.

A good winter food is made thus: Put into the iron pot 1 peck of hominy, pour on it 4 buckets of water, and boil 1 hour. Chop up 4 lbs. fat pork (fresh) and 2 pecks of potatoes (skins on), put them into the pot and allow water to cover them, boil one-half hour and then stir in a handful of salt, the same of black pepper, and sufficient coarse wheat bran to make it stiff. Boil until hominy and potatoes will mash with a spoon, and feed moderately hot, say "pretty warm."

Plain corn meal mush, with meat fibrous or cracklin cooked in it when the latter article is not burned—as is often the case when it is not convenient to examine before purchasing—is very wholesome; but where skin diseases are concerned, avoid fat or cracklin, which contains more or less. Use in its place lean meat, neck pieces or other cheap parts. Better use no meat than fat. Feed cold.

As a staple article for all seasons I would recommend baked corn bread with cooked meat cut fine and stirred in before baking. The meal should be mixed with cold water, seasoned with pepper and salt, and baked (for a loaf two inches thick) one hour in a hot oven, turning the loaf when the top is browned, if bottom does not brown well. If there is any kind of surfeit, leave out the meal, giving plain corn bread alternated with well cooked vegetables, and where convenient, an occasional feed of fried fish. Feed cold. Except in the case of very young pups, do not give any fish bones.

Where dogs put out and come in with wet fur, give occasionally a raw, ripe tomato, or two small white potatoes between meals.

Soup once or twice a week in cold weather is good; but soup in warm weather is a nuisance. It often sickens a dog and causes him to lose his appetite; easily spoils or sours by keeping over night, and, if fed in that state brings on diarrhoea.

Bones are of more importance than most persons think. Each dog should have a bone to gnaw, and a few small or thin enough for him to grind and swallow, at least once a week. As a mechanical agent they cleanse the teeth, strengthen the jaws and harden the gums. Taken into the stomach they contribute a large amount of phosphorus and lime to the bones, muscle and brain, and assist wonderfully in causing worms to loose their hold upon the intestines and expelling them from the bowels. The exercise and enjoyment which a dog derives from gnawing a bone are very beneficial to his health.

Fresh water, cold and clear, is one of the most important items. It should be changed at least three times a day in summer, and once a day in winter, rinsing out or scrubbing the buckets each time. Warm, dirty, stinky water is almost as injurious to a dog as it is nauseous to a person. A man who neglects to keep up a constant supply of clean, fresh water is no more fit to have charge of a kennel than a monkey is to run a barber shop.

Dogs should be chained up at feeding, in order to see how each individual's appetite is, and to prevent fighting and stealing from the weaker or timid dogs' share.

Do not place the food vessel too far from the chained dog, and cause him to choke himself.

The quantity of food given to each, should be gauged by his or her size, condition, etc.; large dogs, and thin or poor ones needing an extra allowance. Is it often necessary to use a little petting and coaxing with choice bits fed him from the hand where the dog is off his appetite or naturally timid in company; and sometimes in the latter case, the only plan is to move him off by himself at feeding time and allow him plenty of time to eat.

Care should be used to clear up all scrap which may be left, and no food allowed to remain about the beds or boxes. It will prevent unpleasant odor, and teaches a dog to eat systematically.

EVERETT VOX CUTLER.

## CURRENT DOG STORIES.

V. B. M. Cobb, the possessor of extensive pastoral interests in this section, has a shepherd dog that discounts the majority of the canine family for faithfulness and studied care to please a master. The dog is seen, like no higher animal to set a task to gratify her master, and so sensitive is she that any manifestation of displeasure on her master's part at her behavior appears to amuse her exceedingly. About six weeks ago Mr. Cobb left for California, leaving this dog with others in the care of the herder. He also turned his mind out on the range to pasture at leisure until he returned. When his sheep were gathered about the camp at night the dog discovered that her master was absent, and seemingly over this fact she grew very anxious and uneasy. The herder observed this restlessness on the part of the dog, but supposed that she would be all right next morning. When morning came, however, the dog was gone. A few days subsequently the herder discovered her on the range with the male and succeeded in inducing her to follow him to camp, where he fed her. She again disappeared. Mr. Cobb was absent about five weeks, and when he returned he repaired to the range to get his milk, which was also a dutiful animal, and to his amazement and relief he found the faithful dog in company with his faithful donkey far out on the range, apparently contented and happy companions. At the sight of her master, however, the dog became perfectly frantic with ecstasy and manifested her maddened rapture by actions that were as easily comprehended by him as though they had been spoken in words.—*State Line (Cal.) Herald.*

VI. Animal instinct of a very high order was exhibited at the Bulldog ranch last Sunday. The dog, named "Bully," was there with a fine pointer dog. All hands were seated at the dinner table, and at once the dog went up to his master and commenced whining. The attention of the master was attracted to the dog and turning around he asked what he wanted. The dog reached up and dropped a gold ring in his hand that he picked up somewhere. Dr. Meyer recognized it as one that had dropped from his vest, but knew nothing of the loss until the dog found it.—*Dendwood (Iak.) Times.*

VII. As an evidence that whisky is an infallible antidote against poison, we will state that Mr. J. W. Jackson, while out on the prairie some few days ago with his fine-blooded hunting dogs, had one of them bitten by an enormous moccasin snake. The reptile fastened his fangs on the edge of the dog's tongue, from which a perfect stream of blood issued. Such was the force of the virus that the wound inflicted became instantly black, and the dog's tongue and lower jaw had commenced swelling rapidly and alarmingly. The owner, having with him a flask of whisky, lost no time in pouring down the animal's throat about one-half of it. As soon as the whisky reached the dog he lay stretched out as dead, but he was only drunk, as he soon revived from his stupor and was seemingly as well as ever. The place struck by the snake rotted and fell out.—*St. Laundry Democrat.*

VIII. Last evening, as the through mail on the Baltimore and Ohio Road was passing Alpsville, a dog strayed across the track. The pilot of the engine, and the engineer, both of whom were aware that it had been ground up by the train. When the engine reached the city the fireman was surprised to find the dog seated on the ash-pan under the furnace. The dog did not seem to have been severely injured by the pilot, and the train was burnt from its back during the long ride of twenty miles on the ash-pan. This morning the canine appeared quite frisky, and was sent back to its owner at Alpsville.—*Express.*

IX. Policeman Charles Egolf, of the Twenty-second district, who patrolled that dismal part of the Twenty-second ward lying around Nineteenth street and Indiana avenue demonstrated "Sugar" is generally accompanied by the station house bloodhound "Nip." This was an advantage to him on Friday night. Egolf found John Brannan beating his wife about 10 o'clock, and attempted to arrest him. Brannan knocked Egolf down with a brick. A party of roughs gathered to Brannan's assistance and in a trace Egolf was down and being vigorously beaten. Then the bloodhound came into play, like another dog of Montargis and other celebrated hounds of olden times. He rushed into the crowd, bit right and left and kept the assailants at bay until the police came. He then ran with Brannan with a blackjack. He speedily subdued Brannan and conducted him to the police station, his four-legged auxiliary jumping along on three feet and with a couple of broken ribs. Egolf felt fainting upon the floor and when the police came he found his head fractured, but not dangerously, and that his face was badly cut. Brannan appeared to have been through a sausage machine, he was so gashed up from Egolf's blackjack. Yesterday Brannan was given a hearing by Magistrate Severn and committed in default of \$1,000 bail.—*Philadelphia Times.*

A BAD BIRD.—The following story comes to us well authenticated: At a certain club house in Boston there was kept in the billiard room a parrot which was so tame and such a favorite that it was not confined to its cage, but was allowed the liberty of the room, and was often seen perched upon the furniture or wandering about the floor. On one occasion, when the bird was seated in one corner of the room, a gentleman, a Mr. B., entered, followed by his dog, whether a pointer or a setter we do not know. The dog after a few moments winced the parrot, drew on it, and finally stood fast. The bird, which had been up to this time apparently oblivious of the presence of the canine, now turned its head slowly and in tones expressive of the utmost contempt said, "Go home, you darned fool." The dog started, looked, and then turning tail, slunk out of the room. It is said that although up to this time the animal had been a splendid hunter, he would thenceforth never point a bird.

GUESTS EXPECTED AT VINCENNES.—The following gentlemen are expected at Vincennes during the trials: Mr. Luther Adams, Boston; Messrs. J. W. Munson, St. Louis; D. Sanborn and A. H. Moore and party, Phila.; C. H. Raymond and party and Chas. De Ronge, New York; James Moore, Toledo; J. H. Dew, Harry Bishop, E. C. Sterling, St. Louis; H. L. Smith and Brother, Strathroy, Ont.; Chas. H. Turner, St. Louis; Dr. McDermott, Cincinnati; also a number of prominent sportsmen from Boston, Chicago, Pittsburgh, Toledo, St. Louis, Dayton and Cleveland.

NATIONAL AMERICAN FIELD TRIALS' CLUB MEETING.—The annual meeting of this organization will be held at University Hall, Vincennes, Indiana, on Monday evening, November 15, at 8 o'clock.

THE NATIONAL TRIALS—VINCENNES, Ind., Nov. 6.—Already all the dogs in the Grand Hotel, which is one block away from University Hall, are in the hall, and the dogs are being engaged, and the other hotels, the La Platte, Union Depot and Central are certain to have their quota of sportsmen. Mr. H. M. Short, who handled several dogs at the late Penna.

State Field Trials, is seven miles away from here having excellent sport. Mr. C. B. Whitford is also in the neighborhood getting his dogs in trim.

EASTERN FIELD TRIALS.—We are informed on the authority of Dr. H. F. Aton, President of the E. F. T. Club, that there is an abundance of quail on Robin's Island, sufficient to ensure a successful meeting whether others are obtained or not. A meeting of the club will be held this afternoon at 3:30 P. M.

SOME MASSACHUSETTS DOGS.—Ashfield, Mass., Nov. 5, 1880.—*Editor Forest and Stream:* I have been shooting this fall over Cloudsired by Afton, and litter sister to S. T. Hammond's Thistle, and owned by R. E. Sabin, of West Springfield, Mass. She exhibits fine nose, and great speed and endurance for a pup of seventeen months. Must also make mention of two or three other of my particular "pets." First comes Rex, a pure Laverack, one year old, by Lathrop's Dick, out of Lathrop's Luna. He is owned by F. H. Fuller, of Springfield, Mass., who has also lately purchased a son. Rex is a king among pups, and if he is kept to the "scratch" as he has started he will give the "cracks" cause to look to their laurels at no very distant day. Next comes Doctor, a six months old pointer pup out of Lathrop's Kate, and a remarkably promising dog every way for one of his age. He is owned by E. H. Lathrop, Esq., of Springfield, Mass.

By the way, did you ever hear a dog talk? I have an English setter owned by G. W. Gunn, of Springfield, Mass., who will talk and hold a big grouse in his mouth at the same time. His name is Lark, and I have dubbed him "Old Housery" from his quaint, honest ways, though he is but a pup. I was out with him Wednesday when he came to a point by a hemlock thicket in the alders I passed quietly around to the other side and flushed a grouse and shot it. I sent him after it, and he had just picked it up and taken a few steps toward me when he suddenly stopped and made a rigid point off to the right. As there was no mistaking the point I let him hold it a little, and then took a few steps in that direction, when I flushed a grouse which rose above the bushes and passed directly over Lark's head, and when it was about forty yards distant it passed a little opening, and I cut it down. Lark stood staunch as a rock, but turned his head and watched the bird until it fell, when he gave a perceptible start, and whined a few times though he did not stir from his tracks or offer to drop the bird in his mouth. I let him stand a little, and then ordered "fetch," when he came in promptly with his bird, but several times on the way he turned his head toward the fallen bird, and whined, saying in the purest dog dialect, "Of course I should obey orders, but I am most awfully afraid that we shall lose our bird." However, I had him come in and sit up and hold his bird about the usual length of time, and then allowed him to retrieve the other bird, which he joyfully did. When remonstrating with me the expression of anxiety depicted on his countenance was ludicrous in the extreme, and at the same time very flattering to the dog's future prospects. It has been very dry here until lately. However, by plenty of hard work I have secured fair bags of woodcock and grouse the entire season. Grouse are plenter than last year though they have begun to packs which of course make the day's bags more variable than when they are scattered. The shooting, rather, improves as the weather drives them out into the sun. RUFFED GROUSE.

WHAT IS A COCKER?—*Editor Forest and Stream:* I am much pleased indeed to see that Mr. G. D. Macdonald has taken a step in advance of other cocker spaniel breeders in his endeavor to get at a standard by which they may be judged and bred up to. I would be very sorry if his very laudable attempt should be frustrated by breeders themselves. Let our breeders take the responsibility of showing what a cocker should be like and back up their opinions by showing wherein their ideal spaniel is superior to all others, not by pitching into each other and their dogs. It is all moonshine, in my opinion, to say that one man's dogs are half King Charles and another man's English water spaniels (if there is such a breed). We will never come to anything definite in this way. Let them preface their remarks by saying that the modern cocker spaniel is a "mongrel," which no one can deny. There is a line between almost every breed of field spaniel in them except the clumber, consequently we have the various colors—liver and white, liver and tan, liver, black and tan, black and white, black. It is a well-known fact that if the lemon and white is crossed by any other breed of spaniel the lemon color is lost and that liver color takes its place. The old Welsh cocker, lemon and white, is no doubt the foundation of the modern cocker, but as we rarely ever get that color it is a sure indication of a cross.

I have written this to endeavor to show that because a cocker spaniel is not one color or weight it does not necessarily follow that it is not a cocker. Wish Mr. Macdonald to write, and I place myself in the same line, to know what the various breeders consider the very best style of dog of this particular modern breed. Hugh Dalziel in his work gives two classes, the black cocker and the cocker. I think he is quite right; the black cocker is a much larger dog than what is now almost universally conceded to be the size of the modern cocker.

To repeat myself, let the various breeders and fanciers of modern cockers go to work, and describe in every particular, give the weight and measurements of the breed, length of body, height at shoulder, length of ear, position, size and shape of eye, description and character of hair, and all other points necessary to make up a standard. Then I would suggest that the Kennel Editor or other impartial authority should analyze what has been written and give the result, for we may be sure that no two writers will agree on this important subject.

I will not soon future time give what I consider the proper size and shape of the cocker, although not myself a breeder I take a great interest in the merry fellows, be they sixteen or forty pounds.

London, Ontario, Nov. 7.

M. B.

THE DOG-DEALING ENGLISH CLERIC.—The dog-dealing clergyman is a type of the amateur jobber. He often breeds some rather uncommon kind of dog, possibly a species of wolf-hound, the progenitors of which he purchased during his travels in the East, perhaps at an Armenian convent. He invites inspection of these interesting animals, and the intending purchaser makes a pilgrimage to the hermitage of the clerical breeder. This he finds to be an unusually snug country rectory, looking the perfection of all that can possibly be desired in a well-kept parsonage. Pictures of the Holy Land hang on the walls of the drawing-room, and an oak *prie-dieu*, in a little recess lighted by a stained glass window betokens the devotional habits of the family. The divots

—One of the firm of John H. Pray, Sons & Co., wholesale and retail carpet dealers, Boston, Mass., is, or claims to be, a sportsman, and he will at all times take great pleasure in doing a favor for a fellow sportsman in want of any kind or grade of carpeting, rugs, etc., etc. Correspond with the house, or call and see him, and see if he means what he says.—*Adc.*

GUNPOWDER!  
Dupont's Rifle, Sporting and  
Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

**Dupont's Diamond Grain.**—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1½ canisters.

**Dupont's Eagle Ducking.**—Nos. 1 (coarse) to 4 (fine) burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1½ and 4½ canisters and 6½ and 12½ kegs.

**Dupont's Choice Bore.**—Specially adapted for "Cluck Bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 1 and No. 5, No. 1 being the coarsest. Packed in 6½ lb kegs and 1½ canisters.

**Dupont's Eagle Rifle.**—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1½ canisters and 6½ lb kegs.

**Dupont's Rifle Pk.**—"Sea Shooting."—FFG, and FFG. The FFG for long-range rifle shooting, the FFG and FFG for general use, burning strong and moist. Packed in ½, 1½ and 4½ canisters, 6½, 12½ and 25 lb kegs. FFG coarse, FFG fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND**, 70 Wall Street, N. Y. N. B.—Use none but DUPONT'S FFG or FFG for long-range rifle shooting.

The Hazard Powder Co.,  
MANUFACTURERS OF  
GUNPOWDER.

**Hazard's "Electric Powder."**  
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

**Hazard's "American Sporting."**  
Nos. 1 (fine) to 6 (coarse). In 1½, canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

**Hazard's "Duck Shooting."**  
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

**Hazard's "Kentucky Rifle."**  
FFG FFG, and "Sea Shooting" FFG in kegs of 5, 12½, and 25 lbs. and canisters of ½, 1½, 4½, 6½, 12½ and 25 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FFG is the standard Rifle Powder of the country.

**Superior Mining and Blasting Powder.**  
GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

## FOREST AND STREAM.

NEW YORK, THURSDAY, NOVEMBER 18, 1880.

—This is an excellent time to call the attention of your friends to the merits of the FOREST AND STREAM. We shall be happy to supply specimen copies of the paper to any addresses which may be sent us for that purpose.

NEXT week the FOREST AND STREAM will go to press a day earlier than usual. Correspondents will please bear this in mind.

THE LONDON FIELD'S list shows that there are in the British Islands to-day between three and four hundred packs of hunting hounds, and the indications are that the chase is assuming each year greater proportions. Some of the English packs have been in existence no one knows just how long, and it is claimed by one hunt that their hounds are lineal descendants of the dogs introduced from Normandy by William the Conqueror.

STILL REVERBERATING.—Perhaps no other article ever published in an American sporting paper—certainly no one ever before printed in the FOREST AND STREAM—had such a widespread influence as did the discussion, in our issue of Sept. 28, of the "Dittmar Sporting Powder." And we very much doubt if any other article published in any sporting paper was ever received with such a cordial and decided indorsement from its readers. We stopped publishing the letters of our friends on this subject some time ago, but hardly a mail comes to us that does not bring words of approval and appreciation. The echoes are still reverberating. To the writers, one and all, we beg leave to acknowledge our satisfaction at knowing that the FOREST AND STREAM has won their increased respect, and to express the hope that our future may be attended with equal satisfaction.

## MANSLAUGHTER ON THE RANGE.

OUR readers will notice in the rifle columns an account from a Prince Edward's Island correspondent of another of those so-called accidents on the range, which are becoming altogether too frequent. This affair does not differ materially from the usual run of such killings. It may be taken indeed as a typical one and a study of it will show that these mis-called accidents should be treated and punished as cases of manslaughter. It is entirely possible to so construct a target with its accompanying arrangements of marking that it will be impossible for the flying bullet to hit the marker. This being the fact, any contrivance of marking butt by which a man's life is sacrificed should be regarded as a man-trap and the contrivers and controllers of the engine of death held to a strict accountability. It is no answer to say that had sufficient care been exercised here no accident would have taken place; the loop-hole for just such an accident was left open, and as it is entirely inexcusable that such a contingency should exist, so the results should meet with no cloaking over under the title of a mishap.

If a man should construct a boiler, and conclude to make up for the absence of a safety valve by enjoining extra vigilance upon the engineer, he would be held as liable for whatever damage might result from the explosion of that boiler. He is bound to provide the best appliances known for the purpose, and he resorts to any half-way measures and mean pinch-penny and slovenly devices at his own risk. He invites disaster, and when it comes he should be prepared to meet the legal penalties of his carelessness. This reasoning applies to the rifle range, where an association, a club, a military organization or it may be a private proprietor by a faulty construction of butt invites the killing of an employee. Wimbledon went on for years without a single death from gun shot, though bullets by the million went whizzing over the range. Creedmoor has yet to have recorded her first contribution to the death list. Meantime with two such examples of what can be done by proper precautions, we are called upon every now and then to record the striking down of some hard working marker on some one of the miserably appointed and wretchedly contrived ranges scattered here and there over the country. A range may be small, but it is always large enough to serve as a slaughter pen, if proper safeguards are not thrown about the practice. At Creedmoor the most careless marker cannot by any possibility put himself before the target while the firing is going on. He is placed in a pit and stays there, and at most can only receive flesh wounds from the spattering of the lead after striking the target's face. In addition to being safe it is a really very expeditious way of signalling the location of hits; on the other hand the little ranges are generally found to consist of a heap of earth near the target, behind which very secure breast work the marker retires after signalling the shot. There is a certain time of exposure, and a period of occultation of the marker so far as the firing point is concerned. Now if there is a certainty that the delivery of a shot and the exposure shall not be simultaneous, all is well, but the only way of securing their proper alternations is the waving of small flags, or merely the exhibition of them. By the doctrine of chances the time must come when the marker will catch the coming bullet in some portion of his body. This system of marking invites just such a climax; and while that possibility remains the system should find no use on the rifle ranges. When, by the application of vigorous legal definitions, the range officer who permits such an apology for a marking butt to remain is made to feel after one of these accidents that he has the blood of a fellow being on his hands, perhaps something will be done to remedy it. The incarceration of a few rifle-range magnates to answer a charge of manslaughter might have a healthy deterrent effect on the managers of other ranges and lead to an over-hauling of the arrangements on many a shooting ground where affairs are conducted in this happy-go-lucky, slipshod murderous fashion.

If the progress of modern rifle-practice in this country is to be punctuated in this fashion by lifeless markers, it is well that the thing should be known generally. But we object against any such line of murders, for they will be little else after the many warnings which have been given on this point. They all lead to one simple conclusion: That any system of marking that permits any exposure of the marker to the pathway of bullets must lead sooner or later to the

striking of one of these employees. That risk can be blotted out by the use of a properly-constructed range, and any shooting ground not so arranged ought to be closed at once, and not another shot fired upon it until the possibility of an accident has been entirely removed. In the present case a complainant jury have made haste to lay the blame on the dead man; and he, too, in the brief interval between the receiving of his wound and his death confessed that he was to blame. He probably thought so, but the real one to blame is the man or set of men who set this place up as a range, and probably boasted of it as such when in reality it was nothing but a lottery with death, with now and then a blank-drawing in the shape of a slain marker. Rifles and guns are sufficiently dangerous to make the best of precautions necessary for their proper and complete enjoyment. The records of the large, well-appointed ranges prove that it is entirely possible to have rifle practice even on the largest scale without accompanying slaughter, and the little pest-holes of ranges that do not present these conditions should be blotted out at once.

## INDIAN BURIAL CUSTOMS.

MANY influences have of late years conspired to give a decided impulse to the study of anthropology, and students of the subject have not been slow to recognize the magnitude and importance of the field open to them on this Continent. The special task of stimulating and directing researches into the customs and social life of the Indian tribes has been assumed by the Bureau of Ethnology of the Smithsonian Institution, a most wise provision, whereby the labors of individuals, which would otherwise be desultory, or at least incomplete, are combined into a systematic and intelligible whole.

At present we have as the result of the work of the Bureau a series of introductory volumes, the direct purpose of which is to serve as guides for further prosecution of each division of this special anthropological observation and research. The first printed was the "Introduction to the Study of Indian Languages," by Maj. J. W. Powell; the second, an "Introduction to the Study of Sign Language among the North American Indians," by Col. Garrick Mallery, and the third, which is now before us, is an "Introduction to the Study of Mortuary Customs among the North American Indians," by Dr. H. C. Yarrow. Other volumes to follow will treat respectively of Medical Practices, Mythology and Sociology.

None of these branches of the subject possess a deeper interest than the one to which Dr. Yarrow's volume is devoted, for aside from the attention with which we cannot fail to regard the mortuary rites of any people, these customs are, more than all others, significant also of the modes of thought of those who practice them, and of their belief respecting the questions which are of the deepest human import. The way in which these savages, who went before us on this Continent, regarded death, the notions they had respecting departed spirits, and the solution they gave of the mystery of the future—all these are told in their manner of disposing of their dead; and through these we may determine the motives and beliefs which governed their lives. In his sepulchres and tombs the American aborigine has left us the key to his life and character.

In the final work, of which the present volume is the introduction, it is proposed to collate all the trustworthy information contained in several hundred of these volumes. In addition to this material, Dr. Yarrow has, by means of circular letters, sought to gather all the results of present study among the various tribes of the West, and of exploration among the remains left by them in other parts of the country; and the pages of his Introduction give ample evidence that the author has been fortunate in securing the intelligent co-operation of those who enjoy the best opportunities for collecting data.

For the general purposes of the work at its present stage Dr. Yarrow has divided the different modes of sepulture practiced by the Indian tribes into the provisional classes of (1) inhumation in cists, pits, graves, caves and mounds; (2) cremation; (3) embalmment or mummifying; (4) aerial sepulture on scaffolds or in trees, and (5) aquatic burial beneath the waves or in canoes which are turned adrift. The inquiry also embraces all the various rites pertaining to each of these customs, the mourning observances, feasts, food, dances, songs, games, fires and other ceremonies; also the superstitions connected with or inspiring each.

Concerning each mode of burial, and indeed the subject in general, the author has collected for his introductory work an immense amount of information which gives promise of the great value of the final volume and its interest to the general reader as well as to the special student in this particular field.

The purpose at present we are told is "to make a purely objective study of the Indians, and as far as possible to leave the record unmarred by vain subjective speculations;" and hence we are to look for plain recitals of facts, and not for generalizations drawn from the facts. But, as we have said, the chief interest with which we regard the mortuary customs of tribes and races centres in the story they tell us of the beliefs which prompted them. The ultimate object of the study of the subject reaches beyond the Indian's material disposition of his dead and aspires to determine the mental and moral ideas which inspired his life and shaped his character. To rightly draw these conclusions must be the task of those who shall have for their guidance a most comprehensive and authentic collection of facts.

The task assumed by Dr. Yarrow is a preliminary one—it is the foundation; it is therefore most important, and the character of this introductory volume now put forth is a sufficient guarantee that the work is in able hands.

### NEGLECTED FISHES.

THERE are tons upon tons of good food thrown away within a hundred miles of New York through senseless prejudice, and hundreds of families in the city suffering for want of something to appease their hunger.

This food is mainly fish, against which nothing can be said except that it is not customary to eat it, and so it never becomes customary. A society exists in New York composed of gentlemen interested in fishculture, and those who approve of that excellent work, which has for its object the eating of the class of food to which we refer. They had two or three meetings, but have not been heard from lately. They called themselves the Ichthyophagists, and whether the name was a greater burden than they could bear or not we do not know; but their object was a noble one, taking upon themselves the dangers of nightmare by following a course of *Euglenophagus littoralis* with fried *Branciotoma caribæum* and boiled *Linulus polyphemus*. Think of it! Not only these evils may occur to these philanthropists, but they are also exposed to derangement of the jaw in pronouncing the names, which may result in loss of molars or at least further torture at the hands of the painful dentists.

We are moved to these remarks from having recently dined upon the "wing" of a skate, a fish commonly eaten in Europe, but cast aside by our people for no good reason. It was broiled and was truly good. The opportunity occurred while inspecting a pound net on Long Island in company with the landlord of a hotel, and we took out a large skate from the net for anatomical purposes and then proposed to eat it. The table contained fresh roast pork, roast beef and roast duck. We tasted lightly of the latter, but made the entire dinner on the skate.

These foolish prejudices are found everywhere. In one place it is against sturgeon, lampreys, turtles, eels, frogs, or other aquatic animal which is eaten in other parts as a delicacy. The squid is eaten in some countries, but our fishermen won't even try it, although it is held in high esteem at some New York hotels, chiefly Spanish and Italian. In speaking on this subject the Duke of Argyll, in a late number of the *Contemporary Review*, says of the markets of Munich: "The hinder legs of frogs, nailed upon triangular pieces of wood, and a large piece of snail (*Helix*), with the aperture closed, apparently by a sort of operculum of clay, seem to be a well recognized article of human food." Further on he says: "In Munich frog legs are much used, and not only over the whole of the south of Europe, but over the United States. In New York they are among the established dishes of the breakfast table."

The squid, *Loligo*, to which we referred, is only used as a bait with us, but the Duke has seen them eaten raw. He tells us thus: "Seeing a little squid taken from a net some years ago at Mentone I asked one of the fishermen whether it was good to eat. 'Ecco!' was his reply; and, suiting the action to the word, he popped the poor squid alive into his mouth, and the beautiful eyes of the little creature were seen gleaming with an imploring look from the closing cavern of the Italian's jaws. This is rather an extreme case, but well cooked with vegetables the gristly substance of the cuticles is a wholesome and excellent article of food." And while we think it possible that it may be an excellent dish if properly cooked, with or without the ink-bag, we would hesitate at a raw one. They are sold occasionally in New York at \$1 to \$1.50 per dozen, but we do not know of Americans who eat them.

The main obstacle to introducing skates, sculpins, gurnards and other strange fishes, which are thrown from the nets by the ton, into our markets at a price which would induce poor people to eat them, is the freight; and it seems to us that an opening for a lucrative business could be made by some enterprising fish-dealer, who would take these fish from the fishermen at a low figure and establish a market in the poorer quarter of the city. He could most likely get favorable terms from the railroads in consideration of the fact that these fishes pay no freight whatever now. The man who will do

this, and introduce good and cheap food to the million who do not ask nor expect salmon, Spanish mackerel, brook trout, nor even shad, when at its cheapest, will do a good thing for both humanity and himself, and will be more deserving of a statue in Central Park than some men whose effigies have been mentioned as deserving that honor.

Let us have skate.

THE WICKERSHEIMER FLUID.—The publication of the formula for making this preserving fluid, which we gave in our last issue, has brought us many letters of thanks. An old subscriber writes: "The publication of the recipe of this famous fluid is alone worth the price of many subscriptions. I have no doubt that if some private individual had the formula before it was published, he could have made thousands of dollars while it remained a secret. We have long needed such a preserver, and now that we have it we will not only prize it but also the paper which gave it to us."

Our esteemed correspondent, Dr. Sterling, writing from Cleveland, says:

"I am glad to see your article on Wickersheimer's fluid. The man should have a fortune on it, and a monument, too. I have experimented, and find it is all we wanted. I know it will produce a revolution in the preservation of perishable materials."

VENOR, the weather man, has almost completed the preparation of his almanac for 1881. This seems a little early for even Venor to talk about next year's weather; but we presume that he knows what he is about; and then, for that matter, we should have faith in his predictions for five years ahead. We believe in Venor, and there are 100,000 others who believe in him enough to read his almanac.

ANONYMOUS letters do not receive attention at this office. If this is remembered, much time will be saved to those curious individuals who pen them.

## The Sportsman Tourist.

### ROUGH NOTES FROM THE WOODS.

A CANOE TRIP TO BLUE MOUNTAIN AND THE RAQUETTE WATERS—STEAMERS AND THE WHISTLES THEREOF—GUIDES—THEIR BOATS AND WAYS—COMFORTS OF THE CAREYING SYSTEM; AND A WORD ABOUT THE LAKES.

—Yes. Let us leave the hot pavements, the baking, blistering walls, and sweltering sleeping, or sleepless, rooms. Let us, I God's name, take to the cool waters and calm shades of the forest.

For brick and mortar bred filth and crime,

And a pulse of evil that throbs and beats;

And men are withered before their prime

By the curse passed in with the lanes and streets.

And lungs are smothered, and shoulders bowed,

In the poisonous reek of mill and mine,

And death stalks in on the struggling crowd,

But he shuts the shadow of fire and pine.

IT was on the morning of the last 7th of August that ever was when I started for Third Lake to fish for salmon, as lake trout are invariably called here. The weather could not have been fairer. I had a blanket roll at Sam Dumkin's camp, consisting of gum coat, blanket, pocket hatchet and revolver. It was a good time to get the traps. Fourth Lake is at times rough. Now it was smooth. Sam is one of the oldest guides in the wilderness, and of course we had a chatty sort of a visit, which made me a little late in paddling out for the Third Lake.

Now, a short mile below Dumkin's camp is the cold-spring, or Snyder camp, which I had a standing invitation to visit. As I was passing Mr. M. the head man of the camp, halted me with a cordial invitation to land. I did. Found the cold-spring camp rather a tight-acted affair for a forest residence. There was an ice-house, a good boat-house and a log-house that would be a palace to an early settler. They had a guide who, like most guides, was an excellent cook, and of course I was not to be left until after dinner. I wish to record the fact that the lake is a most beautiful place. In the wilderness was at that camp. They were also capable of a glass of good wine, and people of culture, withal. What wonder if it was 4 p. m. when I said good-bye, and paddled out into the Fourth?

Then it struck me that I had a seven-mile start toward Blue Mountain Lake, with such weather as I might not get again in a month. True, I had no supplies, but they could be had at Arnold's, some two miles above, and I struck across and up the lake to Arnold's place, had a delicious lunch, and rearranged my dulle for a trip, and paddled out for a log camp. I knew of at the foot of the Fifth Lake. It was getting dusk when I struck the inlet, and by the time I reached the camp it was nearly dark; but I found the camp in good condition. There was fresh browse and plenty of dry birch wood, with a roof invulnerable to rain. I had no tea or coffee, or any sort of dish, but I foraged an old tomato can and made a pot of hemlock tea, had a glorious fire, and a night just such as a woodsman loves. There was no soul within miles of me, and the shriek of the steam whistle was afar off, beyond the keenest carshout. The owls were plentiful than usual, and in exceptionally good voice, while a loon, just above in the Fifth, kept up his strange wild cry at intervals through the night.

At daylight I repeated the dose of hemlock tea, finished the little lunch I had left, and paddled on the Fifth Lake, which is only a frog pond of some ten acres.

From Fifth to Sixth Lake there is a carry of three-quarters of a mile, which rather turned my hair, for it was a warm morning; but from Sixth to Seventh it is clear paddling. From Seventh to Eighth is a still carry of one mile and twenty

rods, according to the best informed guides, and before I got over this I was pretty well winded.

At the landing on the Eighth I met a young man, one of a party of two engaged on the Adirondack survey, and who very cordially invited me to his camp for dinner. I was well. Like Falstaff when he took a foot command, I was "heinously unprovided," and I felt too weak and tired to make the tedious carry from Eighth Lake to Brown's Tract Inlet without food and rest. I found the two young men camped in a shanty tent on the south side of a point which makes out from the mainland, and their landings so hidden that they were not likely to be bored with visitors. Stayed with them two hours and then, having had also some food on pork and beans, and paddled around the point to the ferry, and feeling very well competent to make it. To a strong, well man it might have been a trifle. To me it was most exhausting. I arrived at the landing on the inlet so tired and beaten that I lay down on the leaves for more than an hour before launching out. I found the inlet to be modeled after the letter L, with an occasional oxbow thrown in for variety, and a dull, sluggish stream, deep and dark, fringed with aquatic plants, shrubs and dank cold grass, with not a place in its course of four miles where I would like to venture a landing. At last the broad Raquette lay before me, dotted with green islands, and with its quaint bays, points, headlands and islands so mixed and mingled to the eye that although my directions had been laid I was puzzled just which way to steer. My destination was Enn Bennett's, and I was to turn a green island which lay to the left, when I was assured they should see his landing with a flagstaff and flag, which on the larger lakes is the usual sign of a forest hostlerie. I saw no flag, but after off was what looked to be a new building, and from thence came a sound as of one who drives nails into resonant boards. As I live it turned out to be a new church in the course of erection on an island. Just where the congregation is to be seated I can't say, but preachers are plenty enough here in the summer, and perhaps it is well that they should have a regular house of worship somewhere in the woods in order to keep their hands in while doing the wilderness. At length, after much desultory paddling, I sighted Bennett's flag and made my best time for the landing. It was time; the wind was rising, and Raquette Lake can get too rough for a ten foot canoe very easily. I was surprised to find Bennett's steamer from I can't say, but I can't say, that they should class house in larger towns on the direct line of railroad travel. Table, beds and rooms were furnished forth in a manner that left little to be desired, and when it is remembered that all supplies must be brought by a long and expensive route from the eastern side of the wilderness his terms seemed very reasonable. Two dollars per day, or ten to twelve dollars per week, are Ed's figures, and having been a guide for years he knows just what the tourist requires better than a greenhorn.

But alas! for the romance of paddling through the forest, alone in an eighteen-pound canoe.

Before I was half rested my ears were pained, my soul was sick with the shriek of the steam whistle, and a small steamer rounded to and made the landing after the manner of small steamers outside the Adirondacks.

The little canoe serves as a letter of introduction all through the woods, and I soon struck up an acquaintance with the pilot of the steamer—she wasn't large enough to sport a captain, who said, "You don't want to paddle that creakle-heck over this lake. Put her on deck and come with us." And did. I was very tired and far from strong. It seemed silly to do so much hard work needlessly, and I went the rounds on the little steamer which was pronounced the name. Across the lake we made another landing—Kenwell's—where we found the other hotel, new, neat, well found and moderate in price. Kenwell's terms are \$1.50 per day, \$7 to \$8 per week, and his place is very pleasantly located. From Kenwell's to the Forked Lake House landing, and here I struck tourists and guides in force. Leavitt was full of overworking. I could find a place to sleep after some managing, and the table was excellent, but people were becoming too numerous, and I had a suspicion that I had left the wilder part of the wilderness behind me when I left the Eighth Lake. Game and fish were by no means plenty. The Forked Lake House had a corps of guides employed, but they could not keep the house in fish or venison. I did not take either after leaving the Fulton Chain. All the same every tourist had his breech-loading battery, and a full supply of rods, reels and lures, which is a great comfort to the average tourist, and I had a suspicion that I had left the wilder part of the wilderness behind me when I left the Eighth Lake. Game and fish were by no means plenty. The Forked Lake House had a corps of guides employed, but they could not keep the house in fish or venison. I did not take either after leaving the Fulton Chain. guides at 11 p. m. took their blankets and went out to seek a spot to camp in for the night. And little more than eight years ago there stood a bark shanty just above, the only sign of human habitation on Blue Mountain Lake. Speaking of this rush to the Northern Wilderness in '79, Colvin says: "Where one came last year ten come this, a hundred the next." He is just well right. You meet them everywhere. They permeate every accessible lake and stream, and it is hard to say what lake and stream are inaccessible. You meet them in the most out of the way places, just where you expected to be alone, and always with breech-loader and fly rod which they hang to like grim death. Said an old guide to me, "If they averaged one deer to three guns there wouldn't be a deer left in the wilderness at the end of three years." Said another guide, one of the oldest and best, "What few deer are killed here had better be killed by parties who employ us; it encourages them to come again." And P. Jones, guide to the Stickney camp and one of the most intelligent, spoke as follows: "We don't kill many deer ourselves, or to catch too many trout. Just enough for use. When we hunt for market we go to Michigan on the An Sable. Killed twenty-five there last fall, and am going again when the guiding season is over. The deer in these woods are worth more to us guides alive than dead. They are worth fifty dollars a head as they run." That is about the view taken of fishing and hunting by the average guide in the north woods.

As I had come to do the lake and mountain I concluded to go through. Climbed Blue Mountain on a hot August morning and on arriving at the summit found Colvin's look-out ladder, made by nailing cross strips to the trunks of two spruce trees. It was rather an old affair and looked shaky, but I went up and took in the view, which was really extensive and fine; and then I followed the trail which leads to the signal on the highest point of the mountain, climbed the signal, and tried to make out the 28 lakes I had been told I should see, but could only make out about half of them. As to mountain peaks the number was rather confusing, but satisfying. They run together and are made by each other in the manner to throw an ordinary mind into a state of temporary imbecility.

I could hardly discern Marcy, and I thought I identified Mounts Haystack and Skylight. But they rise in such immovable and unknowable billows, peaks, points and ridges, that the mind—at least my mind—can retain only a confused recollection of them. It had been hot work making the ascent. It was cold and windy on the summit of the mountain, and the immediate surroundings were cheerless and bleak. One could see the water in the lake in 1879, to give an outlook for the signals of the survey, and the dead, decaying trees, lying just as they fell, were not pleasant to look upon.

There was an excellent bark shanty between the spruce ladder and the signal, and in a swampy depression near the summit, and under the edge of a boulder, I found a pool of cold spring water which rendered the bottle of water I had brought from the hotel quite superfluous. (N. B. When you climb Blue Mountain it is not necessary to carry up a bottle of water.)

I had done the mountain, and it seemed the proper thing to do the lake. I did it. I paddled in and around among the islands, landed up and launched out again, greatly to the delight of the youngsters, who were there in force with parents or chaperones, who were exceedingly taken with the little boat, and then I boldly placed her on the deck of the round-stemmed little packet and paddled by steam to Ed. Bennett's landing on the Rapquette. And then it came down to the double blade again. After a night's rest and an excellent breakfast I started out to cross the lake, and rather got down on my muscle, for the wind was ahead and rising. By the time I got into smooth water at the mouth of Brown's Tract Inlet it was getting rough, and I was glad to be in the tortuous but safe inlet once more. A tedious paddle of four miles, a weary carry of one and a half, brought me to the Eighth Lake. Wind ahead and hard traveling. Another tiresome carry of a mile and over and I was on the Seventh, with the wind strong and the second lake of the chain to cross. I was a long time making it, and was almost too tired to make the next carry from Fifth to Sixth, but I finally shouldered the canoe and made the distance slowly and wearily to the Fifth, which at least ended carrying for that day. It was well that the wind went down with the sun or I could not have made the rough and stormy Fourth, which often drives the best guide boats to land. As it was the canoe pitched and danced about quite lively, and it was nearly dark when I landed at Ed. Arnold's, on the south shore of the Fourth.

Fourthly, by the way, I had a large lake of the chain, and is famed for its lake trout. Arnold's is a central point for catching them, and he is an experienced guide. His terms are low, \$4 per day, or even less by the week. He has buoys at the best points near the house, at which you can fish as much as you please, and you are supposed to bring your fish to the house. A night's rest at Arnold's, a pleasant canoe ride down the Fourth, through the placid Third, by the Eagle's Nest into the Second, by the Stickney camp into the First, with its dead timber and long narrow outlet, and at 9 a. m. I landed in at the Forge House, hauling well pleased with my Blue Mountain trip, but with no idea of repeating it this season. I can do better.

NESMUK.

#### SUMMER SPORT IN ALASKA.

STKA, Aug. 2, 1880.

TWO-THIRDS of another summer had passed away, and for our Almanacs we would hardly realize it, for our mountain tops are still snow-clad and our winter clothing in demand. Since early spring when the ducks and beach birds swarmed in countless numbers representative to their flight northward our guns have lain idle. Now and then an Indian, undeterred by any scruples, has slain a mallard or buffle-head, which are, I believe, the only true ducks which nest in this vicinity, and an occasional grouse or ptarmigan, whose bare breasts showed that its duty to posterity was being performed when killed, have been all the feathered game obtainable for the table. But we have shot quite a number of odd-looking fowl which comes Key identifies as puffin, auk, guillemot, grebe and divers, and of each genus several species. I find in my note-book the names and dates of killing of Northern diver, red-throated diver, Western grebe, horned puffin, tufted puffin, horned-bill and knob-billed Aleutian auk, marbled, sooty, and pigeon guillemots and divers other shags, coots etc., etc. Venison has been plentiful and good, and improving weekly as family duties and cares have grown lighter and the grass more plentiful.

Fish of several varieties have been plentiful, and we have and better sport trout fishing than we did last summer, when by this time we were sated with the work of hauling out bushels of fish that were to be captured by the veriest tyro,

with the rudest gear. This year they have been far less plentiful, and a good basketful is not a certainty.

The cause is one worth noting; it is simply the immense body of snow still resting on the mountains, which has kept the creeks high with snow water, and the temperature as a consequence low. The salmon trout (*Salmo spectabilis*) still lie outside in the warm, salt water, running in for a brief space each flood tide, and finding no salmon rise for as yet the salmon have not taken to the streams) soon returning to the warmer salt water.

Thus the element of chance has entered into the problem, and the fishing has assumed more the character of sport; the more so as although we are pretty sure that each flood tide will bring the trout into the streams, we have no way of finding out, except by actual trial, just how far they will run up, or where we will find them, or when they will run in.

The salmon have been cruising around as usual, but except the first run early in June none have gone into the streams. They appear for a few days and the channels are lively with them, and the pursuing porpoises then they disappear, and for several days none are visible.

There have been five varieties which I know of up to the present date, and just now a run is in, which is composed of two kinds—viz.: the lump-backed—(*Gorbusha* (Russian name), a fish of very little value except for smoking, and the *Kikoo*, a very fair table fish and valuable for canning. Among some three hundred brought in by our boat this afternoon the two varieties mentioned were about equally distributed, and there was one only of a variety, the Russian name of which is *Keschik*. This fish is considered to be the best of all, and is the last kind which run, it not being due before the middle of August. It differs from the *Kikoo* and other good salmon in this, that the tail is nearly square, the scales a little larger and the roof of the mouth is black. I bought this fish for two bits, buying at the same time for use as halibut, bait three of the *gorbushas* for the same sum.

The loss of the creeks has been our gain, for having no other occupation for their time, the salmon have amused themselves at our expense, in taking our spoons while trolling for a fish which has been very plentiful, and which until Dr. Bean came among us we called black sea bass, but which now we who are better taught denominate the *Uthra*. Of these there are two species—viz.: the *Constativatus* and the *Decogrammus*. We get them weighing from one up to eight and ten pounds, and as the efforts of a ten-pounder to get clear are about equal to those of a half-pound red black bass or trout, we have taken no particular pains either in providing very strong gear, or in handling.

Which, however, one day an eighteen pound salmon took hold of a bass spoon, fortunately attached to a good line and trolling rod, handled by a young gentleman from San Francisco, Mr. Ben Woodworth, now spending a month with us, who under such circumstances thoroughly understands his duties, and therefore landed his fish, and when the next day, an eight pounder took the same liberty with a beautiful little spoon attached to a line made fast to a belying cleat, and was hauled in hand over hand by a lady and her husband, both perfect tyros in the gentle art, and who from the description of eye witnesses, exhausted nearly every source which would ordinarily prove sufficient to get rid of even a bunch of kelp, but in spite of which the fish was saved, and hauled into the boat without the aid of gaff or exhaustion, we concluded it was worth while to fit out for salmon.

I of course had not wasted a minute in getting to work, and, fortunately for my reputation as a fisherman, my fifteen-pounder was safely in the boat nearly an hour ahead of the feet of my party, the last of August.

Then everybody went at it. I had five spoons, which had done good service at Alexandria's Bay, Piseco, and Lake Ontario.

I loaned three, and with the result usual under such circumstances—all of the three were appropriated by salmon, which in contests of strength had got the best of the fishermen. I then lost another myself, and on my only one left no salmon will strike. No lines will express my feelings more vividly than those from the "Ancient Mariner."

"Water walk everywhere,  
"And a dry and dark."

which with slight verbal changes will fit.

I have tried small trout string on large Limerick bass hooks, after a fashion I learned at the Galloupes, by which a curve, which secures spinning, can be obtained. These work well enough in getting strikes, but the double guts twist up so hard that at each strike the snells snap and I lose my fish and hook also.

I spoke of purchasing salmon to use as bait for halibut. This may sound odd to you East, somewhat equivalent perhaps to using cod for procurement of copper; but in Alaska it is different. Fresh haddock or mackerel is not better bait for fish of all kinds than fresh salmon, and there is nothing cheaper than salmon here.

Within a radius of five miles from the ship there are quite a number of sand banks on which halibut, are plentiful, and other rocky patches, where immense rock cod (I caught one weighing twenty-three pounds), Norway haddocks and other large fish abound, and the only drawback to good fishing being the usual one, a superabundance of dog-fish, who don't seem to be at all particular, haunting the resorts of all sorts of fish.

The halibut of Alaska are bound to help develop the country. They are plentiful and of excellent quality, and we get them in from five to forty fathoms water.

The schooner General Miller, Capt. Morrissey, 100 tons capacity, left San Francisco, June 13, to search for halibut. Tied thoroughly (Queen Charlotte Sound, Dixon Entrance, Chatham Straits and various other places en route here unsuccessfully. July 5, in sight from this ship, she began to take in fish in large quantities, and on the 21st when I boarded her she had with three of her six dories (a new boat in this locality) taken about seven tons. With her other dories, three in number, the time was occupied in seining salmon for bait.

As a ten-pound salmon can be bought for five cents, and caught perhaps for less than a cent, and as one such fish will cut up into about thirty bait, which will probably catch not less than 500 pounds of halibut, it is evident that the cost of bait is a smaller item in proportion to the returns than is the cost of bait on our Eastern banks.

The schooner has just come in from ten-days' cruise among the outside banks, during which her catch has averaged over 7,000 lbs. per day, and she is now over a third loaded with every prospect of filling up during August, which is always a calm, pleasant month here.

The salt used is procured in San Francisco, at \$16 per ton, and is manufactured at Redwood City from sea water. We all got the halibut fever, and have had lots of fun, hard work and excitement. My biggest so far weighed 150 lbs., and

was 5 ft. 8 in. long. I had a log of wood slung with spans attached to the end of fifty fathoms cod line, and it was very exhilarating to see that log go diving under at about ten knots an hour.

I learn that within a short distance the halibut are far more plentiful than here. So there can be no question but that in time the business will be well followed up, that is if this present venture proves a good market, which, as most all South Americans like salt fish, I fancy it will.

Mining enterprises have received little attention this year. The snow has postponed everything. We live in hopes.  
PISCO.

#### NOVEMBER.

NOVEMBER'S frosty days are here,  
With faded grass and foliage here;  
The tufted woodland tops are brown,  
The oak tree wears a yellow crown.

The landscape far and near  
Is painted with a russet hue;  
The distant hills, crevice so blue,  
Bedden by autumn's lavish brush,  
Glow with an evanescent blush  
Enchanting to the view.

The brooks that thro' the meadows sweep,  
Or thro' the tangled thickets creep,  
No longer flash and gleam;  
For dead leaves fill the woodland walks;  
The wild flowers droop their wither'd stalks  
And choke and stain the stream.

The mill-pond where the wood-ducks swim,  
Swoll'n by fall rains to the brim,  
Pour o'er the mill-dam's mossy stone  
A tide that makes the old wheel groan,  
Revolving on its beam.

The angler no more piles his craft  
In slantly boat or anchored raft  
By brook or pond or bay;

But now it is the joyous time,  
When crisp grass is white with rime;—  
'Tis the sportsman's day!  
The brown quail fill the stubble field;  
In the bare woods, but half conceal'd,  
The partridge is his prey.

And where the salty marshes spread  
The bay-snipe coveys overhead;  
And where the breezy bays expand,  
In shallow cove, by shelly strand,  
The honking, quacking wild fowl poise,  
And yield the gunner endless joys.

Shelter Island, Nov. 7.

ISAAC McLELLAN.

#### TRIGGER AND REEL ON MARTHA'S VINEYARD.

WHILE such a vast number of the countless resorts for the sportsman with their manifold allurements have been so closely, and I doubt not faithfully, described in the columns of the FOREST AND STREAM, I have never seen during the time I have been a reader of that journal even an allusion, if I may be allowed to except a single hotel advertisement, to the by far more than ordinary facilities for healthful and sportive recreation offered to visitors of the rod and gun by the interior and southern and western shores of the "far famed lake" of Martha's Vineyard, which though situated within easy access of the fraternity from nearly every city of the Eastern and Middle States is as yet well nigh a terra incognita to the sportsman from those districts.

The island of Martha's Vineyard, situated as it is in a position peculiarly adapted for the purpose, forms a sort of *medius res*, or middle ground, for large flocks of Canada honkers and immense numbers of widgeon, teal, bluebills, sheldrakes and whistlers, with an occasional mallard more sturdy and nomadic than its wont. In times past mallard were found here in abundance, but with the genesis of "bottom action shooting irons," as those not fortunate enough to be the owner of a breech loader sarcastically term that useful innovation upon the "Queen's Arms," the last named has almost entirely disappeared, and during the spring and autumn flights of these birds it is in the sheltered bays and lagoons of this island, before the advent of the summer visitor, and after the exodus of the camp meeting pilgrims, for which latter this is a veritable Mecca, may rest in comparative security from the labors of their wearisome march from Northern or Southern fields, and with but little fear of that ubiquitous pest, the pot-hunter, plume themselves for the homeward run. This is in no wise a paradise for the before-named pot-hunter. He would either starve here, or what is more probable, would spend a considerable portion of his time within the walls of the county jail; for although there is no regularly organized sporting association here, which is a matter to be greatly regretted, yet the many old customs which are religiously observed by them, and which if prevailing in other districts would almost entirely obviate all necessity for legislative interference to protect the game from annihilation. They are also scrupulously exacting in obedience to the game laws; they neither infringe upon them themselves nor allow others to do so, and we betide the unfortunate whose aversive tempts him to pull trigger upon an unsuspecting feather out of season.

But for a sportsman, whose nature would revolt at the idea of practicing the nefarious slaughter so easily accomplished with the battery and its swiftness, who is willing to give the birds a fair chance of retaining their liberty, the sport is abundant and well worth a trial; and any son of Nimrod possessed of a good gun, a sharp eye and moderately controllable temper, can reap here as large a crop of pleasure and ruddiness as anywhere upon the Atlantic coast. The large ponds and coves which abound here and in close conjunction are favorite resorts for the different species of ducks of which I have spoken, as well as of large numbers of the dusky—or what is more commonly known as the black duck—which, unlike the others, make this a permanent abiding place. But he must be gifted with the craft and patience so necessary to entitle him to the dignity of being a sportsman to bring this wary bird to bag; for he is "to the manner born," and in diplomatic parlance is "up to snuff." In the proper seasons the *Anser canadensis*, the bare mention of whose name must make the pulse of all true sportsmen thrill with exciting desire, is to be found here in quite large numbers and

fairly easy to secure. Although this locality, isolated as it is, includes a territory of but small compass, and is stationed like an advance post upon the very border of the restless Atlantic, there are many other varieties besides migrating sea-fowl.

No other portion of Massachusetts, and I know not if in any of the Eastern States besides, can be found the gamy and toothsome prairie chicken, which abound here in quite large numbers and retain the primitive purity of its Western fellow. Many have supposed this to be the ordinary prairie, so common throughout the sections of this and other New England States; but examination has proven beyond question that this "heath hen," as it is called here, is the veritable pinnated goose of the prairies, but in what manner they came to locate here in preference to any other portion of the Old Colony is not known. However, they are quite abundant and extremely tame, and being well protected during the greater part of the year by a special law, they are allowed to breed in security, and their ranks are but slightly thinned during the "off months."

Here also are quite large numbers of quail, which during the season form one of the most pleasing subjects for the sportsman's cunning. Although the winter here is short, yet they are sometimes very scarce, which, coupled with scarcity of food and the destructive foraging of hunting felines, of which there are hordes here, tend to reduce their numbers very materially.

In their season, plover, willet, rail, snipe and most of the shore birds generally found along our sea-board, are to be had in abundance, and the immense flocks of coots, which lie just off these shores, afford very exciting sport to those who are willing to risk wet jacket or a cold bath; the small dories used by those who make it a business to go after these fowl. The gunner finds no difficulty in approaching within shot of them, and if after several shots have been fired they show signs of uneasiness, or an inclination to seek less disturbed waters, it is only necessary to wave a red handkerchief, or any other piece of red cloth, in the air, attached either to a tiller or gun stick to bring them back at once to gratify their eager curiosity and learn what is the cause of the noise and the waving of a strange chapter of amazement and mishaps at first. If the sea is somewhat rough and the small boat a little unsteady, the young man who can show a score at his sporting club is well calculated to excite the envy of even veteran marksmen, if he has even been out after coots before in an open dory, will be very apt, immediately after pulling the trigger, of what has always before proven his trusty choke bore perhaps, and with his imagination fired with the certainty of bagging at least four or five fowl, to be so founded in seeing the crest of the oncoming wave not two feet from the bows, blown into watery ribbons after receiving the entire charge; but practice and perseverance in this as in other cases bring about better results, so that in a short time the tyro learns to his profit that it is better to fire when mounting on the crest than to shoot through a following sea, while the small boat in which he is pitching in the trough. It is but little use to endeavor to pick up crippled coots; either they must be shot dead at the first fire, or the gunner must wait for another chance. A wounded or wing-broken coot no sooner strikes the water than under he goes and is lost to all sight, and it takes a very keen eye to discern the tip end of his bill above the surface, an eighth of a mile nearly away, when he rises for breath, and a very quick hand to send the shot into the back of his head before he dives again, to add that duck to the day's string.

But I have digressed from my purpose, and instead of describing the shore game of this island have returned to the sea fowl found on these shores. I must not forget to mention the raccoon as one of the game subjects of Martha's Vineyard. Upon being informed of the presence of these animals here I must own that it was not until after I had received conclusive evidence of that fact before my incredulity was overcome. Nevertheless, there are "coons" here and in plenty, and so annoying and destructive are they that "coons" and black-birds are but some of the objects of the sportsman's dread, for the safety of his country. There are but little hunted, because of the scarcity of dogs suitable for that purpose; but with a good "coon" dog, and I must not forget to say with sufficient previous experience to enter into the hunt with open eyes, but few localities can afford better facilities for this historic pastime of "coon" hunting than this very island. And for those who despise not little things, there is as fine rabbit shooting here in winter as any man of moderate means can desire. Thus far I have said of this island, and have not mentioned the strong character of Martha's Vineyard to the fur and feather of the island, but in my next paper disciplines of the rod and line, which can be used to such varied advantage as is offered by few resorts, shall receive their need of information.

E. A. D.

#### TENNESSEE HUNTING GROUNDS.

IN a former article I briefly mentioned some of the geographical features of the Cumberland table land, which is situated mostly in the north middle part of Tennessee. This table land has an elevation of 1,000 feet above the valley of East Tennessee, and its area is about 5,000 square miles. The main rim is bounded by a continuous line of rocky bluffs, which break off abruptly, forming a barrier which in most places is impassable for man or beast. The western edge is more rugged, and notched by deep, narrow valleys and gorges at irregular distances, and separated by huge towering cliffs that rise in massive grandeur far above the average level of the table land. This broad and extensive plateau extends from northeast to southwest about 100 miles and has an average width of fifty miles. The C. S. R. R. crosses the northeastern part, thence following down the Big Emory River into the Tennessee Valley. The prevailing timber is oak, of which there are several varieties. The woods are open except occasional thickets, and during the summer the whole country is covered with a thin growth of wild grass.

Here, if history is correct, was once a noted buffalo range. In Heywood's "Early History of Tennessee" he says that when the first settlers came to the bluff, in 1779, nothing was presented to the eye but one large plain of woods and cane frequented by buffaloes, elk, deer, wolves, foxes, panthers and other animals suited to the climate. The lands adjacent to the French Lick was a large open space, frequented and trodden by buffaloes, whose large paths led to and from all parts of the country and there concentrated. He says that here were evidences as everywhere else of having been inhabited many centuries before by a numerous population. The springs are the appearance of walls inclosing ancient habitations, the foundations of which were visible wherever the earth was cleared and cultivated, and to these walls entrenchments were sometimes added.

Mr. J. G. M. Ramsey, in his "Pioneer History of Tennessee," says: "The woods abounded in game, and the hunters procured a full supply of meat for the inhabitants by killing, bears, buffaloes and deer, and that a party of twenty men went out on the Cumberland as high as Flinn's Creek, and returned in canoes with their meat in the winter; that in their hunting excursion they killed 105 bears, 75 buffaloes and more than 80 deer, and that this source of supplies furnished most of the families at the Bluff with meat during the winter."

Caney Fork is made up of numerous small streams, which drain a portion of the table land, and after running zig-zag courses between outlying ridges, and through a rich forage valley, which has been sparsely settled more than fifty years, the waters remain here still and are frequently caught during the winter months. Otters are found in most of the smaller streams; also raccoons and mink; but the latter are not plenty, and the fur is rather of a poor quality, and I have seen no real prime furs here. Wild turkeys and quail are found more or less through the length and breadth of the State.

#### Piney Balls, Tenn.

I have so frequently noticed inquiries made in the *FOREST AND STREAM* as to where good hunting and fishing could be had, I fancy that an answer from me would be opportune. Tennessee is the place; it is easy of access, thickly populated by a most hospitable people, has a temperate climate, and as many varieties of game and fish and more of them than any other State in the Union. In the mountains black bear are numerous, in the middle and western counties deer and turkeys are abundant, millions of quail, while Redfoot Lake, ducks, geese and swan can be slaughtered by the wagon load. The greatest trouble the huntsman would encounter would be the *embarras de choix*. The following letter to Col. Geo. P. Akers from the famous old sportsman, Matt McKinney, gives a fair evidence of the above assertion.

A turkey hunt to be supplemented with a fine old "buck" is not met with frequently, especially in a country where every thicket has its covey of quail and its trees made mazy by the chaotic growth of vines. When the weather is fine the sun is illuminated by one of our almost tropical moon-lights, the wily Kentucky can be chased or the sly "prussum" may be hunted. Satiated with these sports, at each few miles streams filled with the finest fish, such as bass, perch, suckers and catfish, are met with, and from which the expert disciple of Sir Isaac can derive the most delightful pleasure. The beauty of this section is the climate and the comforts which the sportsman can enjoy. The birds are abundant within a few miles of this city, and a good fox chase can be had within the same distance. For the larger game more remote places must be visited, but in no case a very great way from telegraphic communication. There is scarcely a farmer who will not provide comfortable back, wagons and horses, and in most instances be glad to join in the chase or fishing near his place. Or if the party prefer camping out, as the sportsman said in the *FOREST AND STREAM*, they can do so comfortably with their own hunters. Parties coming this way had better bring their own dogs and equipments, although we can boast of as finely bred and well trained dogs as are in the country, and several of our hardware merchants keep on hand good stocks of fishing tackle; and we have also a gunsmith, who can furnish ammunition and all the paraphernalia which may be required. I mention no names, but simply the fact, so that unnecessary preparations may be avoided by the gentlemen who will be induced to visit the "hunting State."

Nashville, Tenn.

The letter referred to is as follows: I have been idle all this fall and I have put in my time hunting and fishing pretty well. Last week, having grown a little weary of the monotony of this side of the river, I proposed to Major Bingham and went out to the Cumberland at Rock Castle and out in the bottom and killed a wagon load of turkeys. He agreed to it forthwith. So early next morning I heard Bingham's horn, and a yell from Tom and Jim, his two famous old deerhounds, told the story at once that his cartridges were not all charged with turkey shot. He had sent up to the Springs for his son By; and off we went.

Well, we crossed the river at eight o'clock and landed at old Sam Waters', about three miles above the Barbours place, about nine. Old Sam was adjusting the sights of his rifle. I never saw such a turkey sign in my life. By ten we had our horses and were out for a hunt. I did manage to kill one stray turkey, but saw very soon from the motions of Bingham and old Sam that devilish little turkey hunting would do them. In about half an hour a yell from the two hounds and a scream from old Sam confirmed me.

A large old buck was up, and away they went, Bingham and old Sam with them. The wood-choppers had fortunately scattered a flock of turkeys, and the old fellows were following the Buck. By and by I succeeded in bagging two more following the Buck. By and by we were off, with those two old hunters. In about three hours they returned, having stopped the dogs at the celebrated old Post Oak stand, between Skinner's and the old Colley Place. But nothing daunted, in they went again through the same drive, and with about the same success only. This time he made for the Cumberland instead of the Tennessee, and old Sam got a shot about a quarter before he took water in the mouth of Crooked Creek. By and by we were off, with those two old hunters. In the woods, that was a dull prospect for turkey hunting. But we talked the matter over that night, and they both agreed to do better next morning. By sunrise the horses were saddled, and a blast from Bingham's horn was the signal to be off. We hadn't gone a quarter before, under the pretence of a turkey hunt, I saw the old hunters meant the same programme as the day before. So I placed By at the old well, and I took up position at the deep cut on the old railroad track. In about twenty minutes,

sure enough the dogs and old Sam and the major were all booming. They were gone up the river out of hearing for about an hour. But we held our places, and here they came. About the old Wm. House I heard the dogs separate. Tom put one through about 300 yards below By, and I could hear Jim coming like a locomotive directly for my stand. I could see in a twinkling that I "held the ago" on him; and sure enough here he came, a four point buck. Two shots in quick succession as he crossed the railroad track, my Barlow in his throat, Jim abode of his quarters, and the jig was up. We landed with him and three turkeys in Walcott's dory about in the afternoon. Wharton's hunt comes off immediately after the election. I am going to slip over again next week. I don't think I can go in their regular hunt, but will be slipping round on the outskirts.

## Natural History.

### OUR WATERFOWL.

#### II.

PRE-EMINENT among our waterfowl stand the Swans.

Their very name has become synonymous with grace and purity of coloring, and a wild swan is certainly one of the most beautiful, as it is one of the most majestic, of birds. The sportsman, however, usually regards his game from a practical rather than an aesthetic point of view; but viewed in this light these birds are no less interesting. We know of no game that will cause the blood of the man who uses the shot-gun to course through his veins with more rapid flow; and the prospect of getting a shot at a swan is worth almost any amount of crawling through mud and wet. They are very wary birds, and besides, even after one has come within gunshot of them he is by no means sure of his game. They are so large and so well protected by feathers that unless they are struck in the head, neck, or wings they are very likely to escape the disappointed gunner. If wounded only, their tenacity of life is great, and their strength is such that they will fly or swim for a long time after having received a fatal wound. Although swans appear to little advantage on dry land they move through the air or over the water with great swiftness. It would scarcely seem possible that such great birds could fly with the enormous speed which they attain. It is, however, a matter of some difficulty for them to rise from the water, and they are obliged to fly and run along its surface for some distance before they can fairly take to wing. On some of the small alkaline lakes of Nebraska, where *Cygnus americanus* certainly breeds, and perhaps also *C. buccinator*, we have seen them fly several times around the lake, the repeated striking of their wings against the water sounding like a rapid succession of pistol shots. Once under way, however, their powerful wings bear them along with astonishing speed, and it is necessary for the gunner to aim well ahead of his birds if he is to bring them to bag. Their progress through the water is so swift that they can without difficulty outstrip a boat propelled only by a single oarsman. Audubon testifies to this, and mentions that he frequently pursued the Trumpeter swan in canoes without being able to approach near enough to it either to shoot or to force it to take to wing. He also quotes from a letter received from Dr. Sharpless, the following statement with regard to the American Swan: "A gentleman who resides on the Chesapeake, near Brush River, informed me that a few years since he had wounded a swan, and afterward cured and tamed it. To prevent it from flying away he clipped its wing, but it occasionally escaped to the water, where he had often followed it for several miles, with two rowers, before he could catch it."

The range of the Trumpeter Swan appears to be restricted to the western portion of North America, and ornithologists generally speak of it as not being found east of the Mississippi River, though it is included in some lists of birds of the more eastern States, on evidence, however, which is not altogether satisfactory. The supposed *Cygnus pascoi*, which is quoted by Dr. Coues as belonging to this species, was taken in Canada.

*Cygnus americanus* is found throughout the United States, although on the Atlantic coast it does not appear to be common either in New England or south of South Carolina. The centre of its abundance on this coast would seem to be the Chesapeake Bay and the Virginia coast generally. In the west these birds occur in small numbers during the summer, and we have found them breeding in small alkaline lakes about fifty miles north of North Platte, Nebraska. It is only during the migrations, however, and in winter that they are found within our boundaries in any considerable numbers. They breed, however, in Alaska, according to Mr. Dall, where also the Trumpeter is found in summer.

As these articles do not pretend to have any other purpose than to teach the sportsman how he may without difficulty distinguish one species of water-fowl from another, any extended remarks on the habits of the different species would be out of place. For a like reason it is unnecessary to give the special character by which the swans are to be distinguished from their nearest allies among the *Anatidae*. No one who shoots one of these birds in this country will be in doubt as to whether or not it is a swan, and it is therefore only necessary to compare the two species.

*Cygnus buccinator*, Richardson. Trumpeter Swan. White bill and feet black. Tail of (usually) twenty-four feathers. Bill longer than head. The nostrils nearer the base than the point of the bill. Usually larger than *C. americanus*.

*Cygnus americanus*, American or Whistling Swan.

Bill and shorter black. The former is yellow spotted near its base, and shorter than the hind. Nostrils about midway between base and tip. Tail of twenty feathers.

The young of both species are gray, and are smaller than the adults. The spot on the bill of *Cygnus americanus* is not always to be found, being often absent in young birds, in which the bill is sometimes flesh colored. The size of the bill, position of the nostrils and number of tail feathers will, however, serve to distinguish the two species.

The geese of North America belong to four genera, one of which, *Deudrocygna*, is quite southern in its distribution, and is scarcely likely to come to the notice of any of our readers, except those of Texas and Southern California. One species, *D. americana*, merely crosses our southern boundary line, while *D. fulva* reaches California, and is stated by Belding to occur as far north as Stockton, Cal. The former species is reported by Dr. Merrill to be extremely abundant in the vicinity of Ft. Brown, Texas, where it is called *pator maizal*, or cornfield duck, from its habit of frequenting such localities. A correspondent of FOREST and STREAM recently gave some account of shooting this species in Texas. The birds included in this genus are duck-like, tree-inhabiting geese, and serve to connect this group with the true ducks.

Typical forms of the three remaining genera of our geese, *Anser*, *Chen* and *Branta*, are to be found generally distributed throughout the United States during the migrations. Of these by far the most abundant and generally known is the common gray or Canada goose, and this is probably the only one which ever breeds with us, all the others proceeding to high latitudes for the purpose of nesting. The peculiar little "wags" *Chen rossii* is more Arctic than any of our geese, and is very rare in collections, but reaches the United States in winter, and has been taken at San Francisco. The Painted Goose, *Phalacrocorax*, is an Alaskan species, and is only found on the northwest coast.

[TO BE CONTINUED.]

#### SNAKE BITES.

Editor Forest and Stream:

Dr. Stradling, surgeon on board the British man-of-war *Elbe*, is credited with having made a very foolish experiment by allowing himself to be bitten, on the 1st of last August, by a rattlesnake (*Crotalus horridus*). The doctor seemed to have provided himself with the usual antidotes, such as ammonia, brandy, escharotics and ligatures, but feeling no immediate bad results from the bite permitted himself to be thrown off his guard and failed to make use of them. After the lapse of some four hours he was found suffering under excessive prostration, and was restored to life again through unwearied exertions, lasting over two or more days.

Such is the account I have just read in a leading American journal, purporting to be taken from an English scientific publication, in which the details of the occurrence are minutely given. It differs materially from another narrative that I have seen in several papers, to the effect that the Quixotic experimenter professed to have discovered and used an infallible remedy against snake bites; did actually resort to it successfully at Rio, and subsequently aboard ship. I refer to this circumstance simply as introductory to an event, *magna pars fui*, which interested me very much at the time, and which seems to me worthy of being generally known.

Intending to spend the summer several years ago in the mountains of Virginia I took with me, to have constantly about me as a precaution against the perilous venom of rattlesnakes, a small vial of ammonia. One day while out shooting with my son, and being a short distance from him, I heard him call several times loudly to his dog, and finally tire his gun.

Instantly I heard the yelp of the dog, a pointer, and the voice of my son urging me to come to him. Hurrying to his assistance, questioning whether he had shot the dog or had himself suffered some injury, I found on my arrival near him that the dog had pointed a copper-head snake (*Crotaphaga contortrix*), or rather two of them, which seemed to be male and female, and had been struck by one of them on the fore leg just above the ankle joint. My son had shot the one he observed with head erect, which probably had inflicted the wound, not seeing the other which was killed a few moments later by a companion.

The poor dog seemed to be suffering great agony, and was struggling about on three legs uttering incessant cries of pain. It was the work of a moment to bring forth my harshest and thoroughly saturate the wound, the situation of which was very apparent from the presence of a drop of blood that stained the hair around it. The relief seemed to be instantaneous. No other cry he uttered, and seemed to experience no ill effect except that the leg and corresponding shoulder swelled to twice their natural size, and remained so for a day or two. Could the remedy have been instantly applied it is quite possible even this result of the wound might not have taken place. Two or three minutes elapsed between the infliction of the bite and the employment of the remedy.

In India it is a common practice, I understand, for the army surgeons to have about them convenient for instant use supplies of *Aqua ammonii* in order to neutralize the poison of the deadly cobra. Why should not sportsmen, and hunters especially, and all other persons according to the measure of their exposure carry with them in their mountain expeditions a small glass stoppered phial filled with the same liquid as a precaution against mischief from the hardly less dangerous copper-head and rattlesnake?

E. G. W.

Cambridge, Md. Nov. 9, 1880.

Does the PANTHER SCREAM?—In FOREST and STREAM for October 14 your correspondent "Ap-wa-cun-na" expresses a doubt of the screaming of the catamount or panther. While I leave it to Mr. Morris to describe the "kind of noise" his animal made, I here leave to say that if the Northern panther is identical with the panther or jaguar so common along the banks of the Amazon and other parts of South America, its vocal powers are decided enough. Its common cry is a loud, snarling yell, increasing in shrillness and volume, and then gradually diminishing in sound. When the opposite sexes meet, they play cat in a manner that makes the surrounding forest pretty musical, as each strain is generally answered

by the whistle of the monkeys and screams of the alarmed parrots. I have no doubt that in such districts as the Adirondacks, etc., where the larger animals have hard time to hold their own against the frequent incursions of hunters and other visitors, they are more silent and hiding in their habits than they are in the jungles and forests of more unfrequented places. Such has been my experience everywhere with wild animals. I believe all the *Panthera* have the same habit of screaming as our domestic cat. I know the South American and African species have. Like the questions, Do snakes hiss? and Will the shark attack a man? I presume there will be plenty of answers in the affirmative to the question, Does the panther scream? PEREGRINE.

There is no doubt that the panther (*Felis concolor*) does scream. Its cry is merely an exaggeration of the voice of the cat. We have frequently heard caged animals of this species give utterance to sounds which were exactly similar to cries heard in the Rocky Mountains and said by old hunters to be made by panthers.

It should perhaps be remembered that the jaguar spoken of by "Peregrine" is not identical with the panther. The latter is found in South America, but is apparently an inhabitant of higher ground than the former, its range including mountains and elevated plains, while the jaguar seems to prefer jungle and river bottom.

RALLIDAE IN KENTUCKY.—Bardonia, Kentucky, Nov. 10.—Editor Forest and Stream: A good many sora rail have been killed in this vicinity this fall, a bird which, so far as I can learn, has never been found here before. In October I also shot two yellow rail (*Porzana noveboracensis*, Cass).

The coot (*Fulica americana*), another bird which seems to be entirely new to this region, has lately been found here. I have only heard of four, and they were all captured alive, as they were apparently unable to fly. Now as they were evidently migrating and must have got here from the North in some way, and couldn't very well come by rail and steam, will you kindly explain how they accomplished the feat? I obtained two of them and have had them in confinement for over three weeks. They thrive well and are becoming quite tame, eating freely from the hand. They appear to be rather omnivorous, their *menu* yesterday consisting of grub-worms, angle-worms, crickets, tomatoes, corn bread, grass and cabbage leaves; the latter they seem to be particularly fond of. Quail are abundant here this season. C. W. B.

It occurs to us after mature consideration that perhaps they flew.

It must be mentioned that most of the members of the rail family live in such localities that the sportsman might not in a long time catch sight of one. Most of the rail fly only when forced to and usually run away through the tangled grass or high and thick reeds so swiftly that they cannot easily be flushed. If it is really the case that they are now but rarely found in Kentucky the fact is an interesting one, and we should be glad to hear more on the subject. It seems likely that the coots in question had been blown out of their course by recent severe storms and this, if true, might account for their inability to fly.

We hope that C. W. B. will advise us of the success which may attend his attempts to domesticate these birds. We believe that they can be domesticated and that they will very likely breed in confinement.

WINTER BIRDS COMING ON.—The appearance of some birds which are with us only during the winter months would seem to hint that cold weather is near at hand. We noticed in Connecticut, Nov. 6, specimens of *Spizella monticola* and *Agelaius phoeniceus*, and in this city near One Hundred and Fifty-seventh street and Eleventh avenue, a specimen of *Loria leucoptera* was seen feeding on the hemlock cones, Nov. 2.

LATE STATE OF SWALLOWS.—Editor Forest and Stream: On the 13th of October, being at Clark's Island, Plymouth, Mass. I observed an immense flock of the white-bellied swallow (*I. bicolor*). It seemed as if all the swallows of the eastern part of the State were collected at a single special point of departure. There were certainly one or two thousand of them covering the haystacks on the marsh, the wild plum bushes and every place available for alighting, even the swaying leaves of the beach-grass. At one time when wheeling about over the water they took a notion to alight on the rigging of the sloop yacht *Siren*—no mean rival, by the way, of the swallow in speed, as your columns have recorded in the two seasons—then at anchor off the island, and shortly every part of standing rigging was occupied, and many not finding foot-room there descended to the boom or rail. They perched with almost mathematical regularity, with intervals of say three inches between every two birds (just enough to avoid interference of the wings in alighting I suppose), presenting a very curious appearance, as if the ropes were regularly studded with large knots. When the skipper went aboard and saw this condition of his decks his remarks indicated that he held swallows in about the same estimation as Dr. Coates does English sparrows. F. C. BROWSE.

Framingham, Mass., Nov. 4, 1880.

The swallows were certainly late, for they usually leave early in September. The species referred to, however, comes first of all our swallows and is the last to leave us.

In connection with this note we may mention that we saw in this city on the evening of October 24 a night hawk. The bird passed close to us and the identification was unmistakable.

HABITS OF THE BEAVER.—Vale, Iowa, Nov. 9.—Editor Forest and Stream: I have just been to the river to visit the beaver dams I mentioned some time ago in FOREST and STREAM. I find they have just completed large new dams, more than twenty rods from a farmhouse which stands on the bank of the river. There are seven dams within three miles of this town. "Nesemuck" terms these beaver semi-domesticated, which may be true; but if beaver are so shy and so dread the presence of man as Nesemuck would have us believe, how did they become semi-domesticated?

While living on Cedar River in this State some twenty

years ago I have known them to be shot and skinned for small stream, which is some 300 feet wide and navigable for small steamers. The country is now thoroughly settled, and has been for years, but there are beaver to be found there yet. They only disappear about as fast as they are caught off. There were no shot near here by a boy only a few days ago. "They have disappeared." E. B. B.

## Fish Culture.

THE CULTURE OF CARP.

THE widespread interest manifested in the culture of this fish since its introduction by the U. S. Fish Commission is so great that we are certain that our readers will find the following letters from Mr. Rixford and Herr von Behr, the well-known President of the Deutsche Fischerei Verein, who has done so much for fish culture in Germany, of great interest.

Although we have many fish which excel the carp as a table fish, yet we believe that its introduction will prove of the greatest value in those portions of the country where the warm waters produce nothing edible, and that we could with more profit dispense with any other fresh water fish, outside of the whitefish of the lakes, than the carp, speaking from the fish culturist's and an economical point of view: for there is no fish which in confined waters will turn out so many pounds of food as the carp, and its food costs little or nothing. Its rate of growth here has exceeded that in its native land, and its introduction into American waters will prove to be worth a vast sum within the next ten years to our hog-eating farmers, who seldom get a fish dinner. With this preface we give the following correspondence:

RIXFORD, SUWANNEE CO., FLA., NOV. 1.

Editor Forest and Stream:

Your favor of the 23d of October covering a very interesting letter from Baron von Behr, came to me in due season. It appears that I am indebted to you for this correspondence, as it was through the medium of the FOREST and STREAM that the Baron's attention was drawn to my letter to Prof. Baird, which you published, and I cheerfully send you a copy of his letter for your use, as well as a copy of my reply, which you can use or not as you deem best.

Geo. C. RIXFORD.

SCHMOLDOW, in Pomerania (Germany), }  
October 4, 1880. }

My dear Mr. Rixford:

It is after having read in FOREST and STREAM of Sept. 16 your letter about carp that I take the liberty of writing you some lines.

I have been receiving such manifold assistance from your countrymen in my fish-cultural interests, that I am glad to be able, perhaps, to assist you, though, of course, Prof. Baird will have furnished you with the most needed hints.

I dare say carp will delight in the climate of Florida. They are a fish liking warmth before all, and therefore retire in my climate (Northern Germany) from October to May, into the deepest possible mud in the ground of our carp lakes, and seem to slumber there in entire apathy. They spawn with us in May, June and July, the special time depending entirely upon the warmth of the water. We are of the opinion that they need for spawning something like 15 deg. Reaumur\*. All this is rather superfluous for you, but now I may be able to give you good hints.

We put branches of different trees—evergreens or others—in the pond a short time before hatching begins, fixing one end of the branch in the soil, and leaving it swing in the pond some inches below the surface. As soon as the carp begin to spawn they fix their glutinous (adhesive) eggs innumerable quantity upon the branches we had put in, but alas! at the same time Mr. and Mrs. Carp begin to eat eagerly their own eggs. It is only in consequence of the immense quantity of eggs they spawn that the carp is as plentiful as it is. But as for your country, which wishes to get quickly great quantities of young carp, you could make no better arrangement than to take out, after seeing the branches covered with eggs, either these branches (transplanting them in a tub of water in order that the eggs do not get dry) and bring them to a neighboring pond, quite empty of other fishes, or take out the old carp altogether from your spawning pond and leave this alone to the young ones, which after a short time will swarm there by many thousands, and very soon begin to take food of any kind, say cooked potatoes or bread. By giving bread constantly my children got our carp so tame they would come and eat bread from their hands. They get very tame indeed.

The best plan is to have many ponds for the carp all of them being arranged in such a way that they can be made entirely dry. That gives you the possibility of having the carp divided according to their ages—say of one, two, three or four years.

At four years they will grow in your climate to about ten pounds easily. You know that in rare cases we have carp of thirty or forty pounds, while it is nothing unusual to have them up to twenty pounds. If you read German, or have anybody who understands this, my language, I could send you by care of Prof. Baird some books about carp, their breeding and nursing. You know that the Greeks (Aristotle), and old Romans knew this. They came from Italy to Germany in the eleventh century—of course by the monks who were the great protectors of fishes.

In the ponds which contain your carp of two, three and four years you will do wisely to keep with them a few voracious fishes as *Esox* (pike), or similar ones. This seems to prevent their desire to spawn, and therefore assists their quick growing. This principle is generally followed wherever we have large carp culture in Germany or Austria (Bohemia). Beware of having other fishes of a similar family in the same pond with your carp—the crossing gives very bad fishes full of bones and of bad taste.

Now this, my letter, may go. If it reaches you I hope you may find it of a little use. I finish as I began. I got such kind assistance from your countrymen that I shall be very glad to be useful to you. Newspapers make now in a few weeks *le tour du monde*. Let everybody try to make use of

\* About 66 degrees Fahrenheit.

them, and be of use through them to mankind. "Good will to Nations" is a beautiful duty. I subscribe myself,

Yon BENE.

President of the German Fisheries Verein.

Rixford, Fla., Nov. 1.

#### Brown son Bob:

MY DEAR SIR:—Your letter under date of the 10th of October, was forwarded to me through the courtesy of the FOREST AND STREAM and reached me in due season. Allow me at the outset to express my hearty thanks for your kindness in writing me, as well as for the valuable information you have given. My carp (which are of the scale variety) continue to thrive splendidly, and are a marvel to all who see them—especially those who saw them when I first procured them in November last, when they were only about three inches long—and who now compare them, and find of them are from fifteen to seventeen inches in length, and six to seven inches in breadth. They show no signs as yet of going into winter quarters, coming for their food regularly, and I hope to be successful in carrying them through the cool weather without their resorting to the old habit. I find our natural ponds are not exactly fitted for them, as they are generally deep, and not easily drawn off, and very visible outlet or inlet. Small fish, such as minnows, and perch, generally inhabit the ponds, but were better destroyed, as they will likely feed upon the eggs. Turtles are also plenty, but we must do the best we can to destroy the pests.

Your information that the carp devour their own eggs was new to me, and has suggested the idea to me that possibly at that time they need a different variety of food, and I shall about that time change to one composed more of meat. At the same time I can protect the bushes on which they have deposited their eggs from their depredations by a wire fence. I expect they will spawn in the early spring, say March or April. I will be much obliged to you for any works on their culture that you may send me, as I have friends who will take pleasure in translating them for me, and the publication of them may benefit others who have the fish in other portions of the country. I am sure, pardon me for the liberty I have taken in sending a copy of your letter to the FOREST AND STREAM for publication, as the information given will be valuable to many of its readers, and will very likely be copied into many other papers, as the subject is one that is attracting much attention. Your allusion to the assistance that has been afforded you by my countrymen is certainly a compliment to them, and I feel warranted in saying that, in the past, the carp in the future, do all in their power to promote and strengthen the belief duty to fishermen have so pleasantly referred. Allow me to subscribe myself very truly yours,

GEO. C. RIXFORD.

#### THOSE RANGELEY SPAWNING TROUT.

PORTLAND, ME., Nov. 13.

#### Editor Forest and Stream:

IN FOREST AND STREAM OF NOV. 4, a correspondent ("Fair Play") writes of Rangeley Lakes as follows, in criticizing a mode of bait fishing that he advertises to the uninitiated as being very deadly, etc.: "Parties who had permits to fish out of season, granted them by the Fish Commissioners in five days took over fifty breeding trout, weighing in the aggregate over two hundred pounds. Every fish was taken off the spawning beds, and no man can say how many young trout, which would have aided in the restocking of that great fishing resort, were destroyed by these captures."

Let "Fair Play" misapprehend the facts and by his strictures mislead others in their inferences I will state briefly that the taking of those fish was in no sense a matter of sport but of business. The fish taken under permits from the Commissioners were kept alive until ripe, their eggs then taken, impregnated, and placed in a hatching house, and from those eggs will be produced ninety-five per cent. yield of young trout instead, of a probable increase of less than ten per cent. had the fish bred naturally, leaving the majority of their eggs unimpregnated and only such of the balance as escaped destruction to hatch young fish that would be exposed to all the natural enemies during the first few weeks of their existence, when they are so helpless. But it seems idle to repeat what is presumed to be well-known to "Fair Play" and all the readers of FOREST AND STREAM. In taking fish for the purpose of artificial propagation it is impracticable to depend upon sportsmanlike methods. It is purely a matter of business to take the fish without injury and release them alive after the eggs are taken.

The Commissioners realizing fully the great evil that would result in any abuse of our permits for this purpose use all precaution to intrust the business to honorable men. We must of necessity depend upon the noble obligation of the holder of a permit to guard against any possible abuse. My colleague, Hon. E. M. Stillwell, and myself visited Rangeley Lakes early in October, and finding that many of the fish then being taken at Rangeley Stream were "spent," having deposited their eggs, we instructed Messrs. Stanley and Henry to suffer no further delay but to catch the desired number of fish in the most expeditious manner, authorizing the use of a net for the purpose.

At the upper dam a fine lot of trout had been taken and kept in confinement, and none of them were "spent" fish. I stripped a lot of 50,000 eggs in one day there, and then released the fish used. Mr. Stanley continued to send me all the fish taken as fast as they became ripe, and placed the eggs in the hatching house.

We have no reason to believe that any permits have been abused, and regarding the holders of the only permits granted this year as sportsmen and gentlemen we must rely upon their honor that the work shall be so guarded and conducted as to accomplish all the benefits sought and protect us from incurring the abuse that has so far been the only recompense received for our efforts to benefit the public.

Should there ever be any wrong committed under the cover of permits granted by us for this important work of fish culture it is within the province and duty of every sportsman and citizen to bring to our knowledge the facts. But we cannot act upon mere insinuations, nor prosecute violations of the law upon charges unsupported by evidence.

We regard our permits as sufficient guarded and explicit in their stipulations, and as this is public business all the details are open to public knowledge. Permits to take trout in October for the purposes of propagation at Rangeley Lakes were granted to Messrs. H. O. Stanley and the President of the Oquossoc Angling Association, J. H. Kimball, Esq., and a permit to take lake salmon in Dobsia stream and adjacent waters for a similar purpose was granted Harvey Jewell, Esq. The conditions of these permits require that "the fish

shall be returned alive to the waters whence taken and none destroyed for any purpose," and that "the eggs shall be properly taken from each fish and hatched." Furthermore, "no eggs or young fish shall be disposed of in any manner except by and according to the written direction of the Commissioners."

Under our present laws it lies within the power of any person to bring offenders to justice, and those interested in the enforcement of our fish and game laws should bear in mind that an officer is powerless as regards prosecutions unless there is evidence to support his complaints. To your correspondent "Bangor," who dates his letter at Moulton Lake, we would say that we had no funds to employ a special officer to go to the locality mentioned, and we cannot find one who will devote his services to such work solely from a public spirit to do good. The Commissioners had absolutely no more power in the case referred to than "Bangor" himself, nor even as much, as he had evidence to prove his assertions in regard to violations of our laws. We do not have the power of arrest such as is held by wardens or police officers, and could not even obtain a warrant on complaint without having in our possession enough evidence to at least show "probable cause" or conviction on trial.

Our duties are too multifarious and continuous to permit personal service as wardens or constables, but we will personally prosecute whenever evidence is put into our possession.

If the necessary appropriations are granted for the use of our Department of State we can have at our command an organized police force with which we can respond to good effect to specific complaints, and have the means to employ special service whenever and wherever it may be needed, and make justice swift and sure. We regret to say that there is much work left to be done, but we have truly accomplished a great deal with the few tools at our command. We need more complete equipment we can accomplish still more in the future. We have the will and know the way. Furnish us the means.

EVERETT SMITH.

This plain and straightforward explanation by Commissioner Smith must certainly convince our correspondents that there has been some error on the part of their informants, or that they did not get at all the facts. The commissioners are evidently doing their best to increase the fishing.

THE CULTURE OF THE SUN-FISH.—We learn that Dr. J. J. Seely, of the "Water Cure," Cleveland, O., has a pond devoted to the little fish which bears the above popular name. The pond is an acre and a half in extent and the quantity of "pumpkin seeds" in it is said to be considerable. Whether he "kivers" it in winter or not our informant saith not. The "sunny" is a lively little fellow, of faith, and a handsome, and the Doctor takes pride in him. Well, he was our first love when we courted him with a pin hook, and many a spanking from the maternal slipper he brought for luring us to the muddy mill pond, to the complete demoralization of trousers. Ah, me! So long ago, and yet but yesterday.

MORE CARP FOR DISTRIBUTION.—The demand for this fish is increasing from all parts of the country, and for the first time the U. S. Fish Commission has been able to meet the demand. They have been sent all over the Southern and Western States, as well as to the East and Canada. Mr. E. G. Blackford, of Hoboken, N. Y., is the distributing agent for the East. His first order was placed for, and this week he has received from Professor Baird twelve hundred more. Persons in adjacent States wishing a few may apply to him.

Dr. E. Sterling, of Cleveland, O., has also received twelve hundred for distribution to applicants in his State.

CARP FOR OHIO.—Cleveland, O., Nov. 6.—We received here Monday, the 5th inst., 2,000 European carp through the Smithsonian Institution, of which Prof. Baird is the joint guardian. They are being well distributed to the many applicants. The introduction of this cultivated fish I consider as one of the best works to the present time of the U. S. Fish Commission, and I doubt if Congress in the last ten years has done better work for the interest of the people than the appropriation it has made for the culture of fish and fish protection.

DR. E. STERLING.

FISHWAYS are being constructed in the Contoncook, at Hillsborough Bridge, N. H. Salmon fry were put into the headwaters of that stream two years ago.

## Sea and River Fishing.

### GRAYLING FISHING IN NORTHERN MICHIGAN.

A VISIT TO THE STURGEON RIVER.

IN the latter part of July last there were encamped on the banks of the Indian River near where it debouches from Bear Lake, the following gentlemen: Messrs. H. M. Kimball, H. M. Kimball, from Columbus, Ohio; Prof. Franklin of Michigan University; Mr. Keeney, of Cincinnati, Ohio; the veteran steamboat captain and fisher, David Smith, of Cheboygan. It was agreed that after surfeiting ourselves with lake fishing, where we took captive scores of pounds of maskinonge, pickerel, black bass and perch, we should try our skill on the gummy beauties of Sturgeon River, which was said to be the best place for grayling fishing about these parts. The day fixed for the expedition was one of the most delightful of the season, and this to our imaginative minds was to be the crowning success of all our pleasure excursions. Getting all things ready, our pack wagon well stored with food for the inner man, and our camp equipage lashed to the box, we jumped into the boat that was to carry us across the river, and in a trice were landed on the opposite shore. Here we found our tent and guide ready to move; our wagon that was to jumble us together over the woody road, made up in size what it lacked in slow, and its seats were not over-bounding with cushions or springs. We rode "on top," and experienced a kind of elevation that does not belong to the spiritual order. It required all the dexterity of a circus performer to hold on to our seats, and frequently we found ourselves occupying each other's seat when we least expected it. It was the roughest and most animated ride I ever passed over, yet in this country it was called a good turnpike. After holding on for two or three hours and all tired with the effort

of keeping our equipage, we halted at an ice-cold spring to take a drink and catch a mess of grass-hoppers for bait. Finding our labors poorly compensated by individual running of crabs, and grabbing the little jumpers, we conceived the idea of coralling them by means of a mosquito bar close at hand. One taking hold of each end and running in parallel lines and holding the net perpendicularly, we soon succeeded in getting all of this kind of living bait we needed.

At the cry of "all aboard!" we jumped on our lofty seats and were soon off again through the woods and over the plains for the Sturgeon River, distant thirteen miles, and at three miles distant from the river we lost one of our wagon tires, and were brought to a precipitous halt for a buckshot out to help remedy the difficulty. Building a huge fire on both for the light and to consume the pesky mosquito, our veteran Captain Smith set about preparing our supper, while the others with hammer and tongs heated and adapted the fire to its lonely felloe. This over, we sat down to supper and hog and coffee, crackers and potatoes supplied our evening meal, which was enjoyed with a relish. Our camp-fire was to me one of the pleasant features of the trip. Strong and willing arms piled up large logs and fallen trees for a backbone to the fire, causing it to throw its light and cheery warmth directly into our tent, and by fastening back the front flies we had a warm, dry and inviting bed to spread our blankets for the night's rest. Our camp-fire burned bright and hot all night, and lying on our lowly beds we could look out beyond the fire and see the beautiful lake in the distance, and the changing shadows caused by its flickering light made a beautiful and weird-like picture, on which we gazed till tired nature's sweet restorer, balmy sleep, threw its soothing mantle over us, from which I did not awaken till the early morning gray told us of approaching day.

The first sound that greeted us was from our musical friend, Hubbard, who sang "Come Join the Huckleberry Picnic." In a trice we were up, our feet and hands about the Captain Smith to hurry up breakfast. We made our farewells, and the usual refreshments, which differed but a little from our previous supper, except the hog exceeded in bulk the potatoes. The coffee was measured out in infinitesimal doses. Never was coffee better or pork eaten with a keener relish. Our tin plates and cups seemed more inviting than the finest China and gold and silver. We were all looking at home. Breakfast over, we started early on our fishing frolic, three of the party taking it on foot. About two miles out our road forked, and we made for the fallen trees that gridironed it for the space of a quarter of a mile. The only alternative left was to cut a new way wherever the smaller trees and brush permitted access to the passable road beyond. So much time was occupied by this slow mode of locomotion that we did not reach the dam of the north branch of the Sturgeon till nearly 11 o'clock in the morning. Gathering together our fishing tackle, we hurried down the steep bank, and in a jiffy commenced throwing out for the little beauties, and betwixt were made as to who should catch the first fish. Some tried the brown-backed fly, others the grasshopper, while the veteran Capt. Smith essayed the red butterfly, a few having been caught on the way. As we walked a pretty sight to see the old pioneer wading into the stream, holding his fly and clucking at some fallen trunk or log to catch the first fish. In an instant a ripple is seen, the hook is taken, and whiz goes the line as it escapes from the reel, and the first grayling is landed with three cheers for the gallant and successful captain. A moment more and a shout goes up at a little distance, and Mr. Hubbard is declared second winner, he having landed a beautiful half-pounder. As we had just come, though I felt all the ecstasy of the occasion, and being a novice, I felt that I lived in hopes of being the third on the list of successful anglers. As all sides go up the spirited ejaculation of "Another!" and "Another!" till the sport becomes to me not only monotonous, but absolutely invidious. I conclude my fly is not the thing to entice these gummy beauties from their favorite haunts, and exchange it for another kind bought of Mr. J. E. Long, of Detroit. Getting ready, we make a graceful cast near an old log, and in an instant we feel the jerk, our fly spins out, and now we have caught a perfect beauty of near a pound in weight, the largest yet taken. Three of us try our luck fishing down stream; the others move up against the current.

Our camping ground for the night being at the bridge two miles below, where the Gaylord pike crosses the Sturgeon, we fished till three o'clock, having taken all we could countenances, and then we concluded to try a short cut through the woods to camp. We had not traveled over a quarter of a mile when we struck a thick, impenetrable jungle, and the concentrated smell of a dozen menageries almost stifled us. We peered around in the deep shade and saw the sight of ruin. We smelled, we saw and we almost felt his bare presence, when it was put to vote whether we should go on to seek our way back again to the dam and await the coming of the other party, or whether we should make a dash for it, and, amidst the action to the word we should make, I assure you your correspondent was not behind in that race, though his spectacles were never seen more. We couldn't bear to stay there, so made track, on our way back, to enjoy our piscatorial exercise in a less aromatic atmosphere. Either our luck had forsaken us or the fish were all caught about the other party, and now concluded to try a short cut through the woods to camp. We had not traveled over a quarter of a mile when we struck a thick, impenetrable jungle, and the concentrated smell of a dozen menageries almost stifled us. We had not traveled over a quarter of a mile when we struck a thick, impenetrable jungle, and the concentrated smell of a dozen menageries almost stifled us. We peered around in the deep shade and saw the sight of ruin. We smelled, we saw and we almost felt his bare presence, when it was put to vote whether we should go on to seek our way back again to the dam and await the coming of the other party, or whether we should make a dash for it, and, amidst the action to the word we should make, I assure you your correspondent was not behind in that race, though his spectacles were never seen more. We couldn't bear to stay there, so made track, on our way back, to enjoy our piscatorial exercise in a less aromatic atmosphere. Either our luck had forsaken us or the fish were all caught about the other party, and now concluded to try a short cut through the woods to camp. We had not traveled over a quarter of a mile when we struck a thick, impenetrable jungle, and the concentrated smell of a dozen menageries almost stifled us. We peered around in the deep shade and saw the sight of ruin. or Nahant among the sea-serpents. The family occupying Esopus Creek, New York, have begun to move, with a few exceptions, who stay behind to see the mud turtles boded down for the winter. In moving a sad accident happened, which we publish for the benefit of other excursion parties of *Apodals*. While leaving the mill-pond on the creek the advance guard by accident mistook the way and got into the turbine wheel of the grist mill of Jacob Frelich at Sangerites, and many were cut to pieces before the mass of bodies stopped the wheel. Many bushels of eels were killed or captured and their friends at the sea-side will await their arrival in vain.

**A MANTIS SHRIMP IN THE EAST RIVER.**—Arthur Boyce, of No. 45 Whitehall street, one of our oldest readers, and a noted fisherman of the Black Warrior region, has kindly sent to this office for inspection what he and others regard as a very interesting nondescript. It was caught on the surface of the water, in the slip of the Hamilton Avenue Ferry, New York side. It was swimming apparently in search of food. Captain Peter Silvie, of the above named ferry, captured it in a scoop net on the night of Oct. 21. It proves to be a very fine specimen of the *Squilla cymosa*, or Mantis shrimp.

This species of shrimp, though not common in our waters, occurs quite frequently. It is found along our Southern coast as far as eastern Florida. In countries where it is sufficiently abundant the spillo is highly esteemed as food.

The specimen captured by Mr. Boyce is an unusually large and very fine one. It has been preserved in alcohol, and is at present at this office.

**ANOTHER BIG "SMALL-MOUTHED" BASS.**—*Cincinnati, O., Oct. 31.*—In issue in your issue of October 28 an account of a black bass of 64 pounds weight. I also contribute a photograph, but whether of a small or large mouthed bass I won't venture to say. The fish was caught at Middle Island, Lake Erie, in the fall of 1878, by a gentleman, a minister, I believe, of Indianapolis, Ind., and was the first-bass he ever caught. The bass weighed 64 pounds, and was also short a lead sinker. Jno. S. Dollar, Put-in-Bay, O., can furnish direct testimony to the above.

**HEAVY BASS.**  
The picture is that of a "small-mouth black bass" (*Micropterus salmoides*), and the weight given is exactly that of the one sent by Dr. E. Sterling, of Cleveland, and we now think it firmly established that this fish reaches a weight of 64 lbs. In Lake Erie, but whether it grows as large as that in any other water or not we cannot say, as before the two pictures were sent we doubted its ever growing above 5 lbs. We learn as we live, however, and may yet learn that other large and deep waters contain as large fish of this species. The other one (big mouth) grows very large, especially in Southern waters.

**THE ANCHOVY.**—*Philadelphia, Nov. 12.*—Mr. John A. Ryder, in giving me the account of the eggs of the American anchovy referred to the silver sides, *Oligotoma Notata*, not to the so-called spearing, *Engraulis vitellus*. Homo.

We were misled by the common name, never having heard *C. notata* called "anchovy." It is known as "frier" and "sand smelt" in other parts, while "silver sides" is common to both fishes named and also to others. It is important to know what fish Mr. Ryder referred to, and we are glad to be corrected.

**ENFORCING FISH LAWS IN NEW JERSEY.**—*Red Bank, N. J., Nov. 10.*—A case of great interest to the people of the State, particularly to those engaged in the fishing business, has just been decided by the Supreme Court. An act passed April 5, 1873, prohibits the use of seine nets in the Shrewsbury and Navesink rivers. More than a year ago George Curtis, Fish Warden of Monmouth County, caused the arrest of Jehu P. Cooper for dragging a seine in the Navesink River, and at the trial before Justice Jacob Curtis, judgment was given in favor of the Fish Warden. Thereupon the case was removed on certiorari to the Supreme Court, which Court affirmed the judgment of Justice Curtis.

**CATFISH TAKE THE FLY.**—*Twin Lakes, Pts., Nov. 10.*—You have noticed two instances of catfish taking the fly—I add a third. A neighbor fishing in the St. John's last season for bass with the fly caught a catfish that rose finely. Now we have started this thing I think "cats" can be educated.

Ducks lying frequently within a week. S.

**THE SILVER BASS OF CANADA.**—*Quebec, Nov. 11.*—Inclosed please find sketches of fish sent me some time ago, and in reference to silver bass you will see it is the fish you call white lake bass, or *Acrosso chrysops*, and is caught only in the Lower Provinces. Black bass are the only kind caught west of the Miramichi.

**"DEACON DILL" AT HOME.**—*"Deacon Dill's"* letter in last week's FOREST AND STREAM on "Fishing at Belle Ewart" is well worth reading. We regret that it is too long to reprint. —*Toronto Mail.*

—THE FOREST AND STREAM presents its compliments to "An Old Subscriber," and respectfully intimates that he ought to know its rules well enough by this time to have signed his name. *Verbum sap.*

**PEDESTRIANISM.**—The record of long-distance walking has just been beaten by Rowell in the six days' match at London. The successive performances have been: Weston, 431; O'Leary, 501; 510, 530; Corkey, 531; "Blower" Brown, 512; Weston, 530; Brown, 535; Hart, 565; Rowell, 566.

—It takes very little to collect a crowd in New York City. We have seen a whole street blocked up by an eager throng pressing around a mouse trap. The other day there must have been a thousand persons collected in Union Square watching the didoes of an enraged gray squirrel, who was trying to save his peanuts from the thieving sparrows.

—\$500 will be paid for any case that Hop Bitters will not cure or help. Doubt not.

# Game Bag and Gun.

GULL ISLAND CLUB.

FOR several years past certain members of the Jersey City Heights Gun Club with others have taken their yearly trip to Southern waters in pursuit of swan, geese and duck. As year by year the water-fowl seemed to decrease or go further South on account of the multiplicity of the shooters, a project often talked of and over by the above mentioned members has finally assumed tangible shape. The Gull Island Club was formed with the following officers and members: Ben Payne, President, J. C. H. G. C.; Livingston Gifford, Secretary, J. C. H. G. C.; A. Herilage, Treasurer, J. C. H. G. C.

**Members.**—T. Hall, J. C. H. G. C.; R. C. Johnson, J. C. H. G. C.; F. C. Cummings, J. C. H. G. C.; J. H. Van Gilder, J. C. H. G. C.; D. Toffey, J. C. H. G. C.; John J. Toffey, J. C. H. G. C.; Wm. B. Wheeler, J. C. H. G. C.; G. B. Eaton, J. C. H. G. C.; J. B. Burdette, J. C. H. G. C.; F. M. Thomson, J. C. H. G. C.; N. E. Nash, R. I.; Capt. J. Brown, R. I.; E. Z. Wright, Utica, N. Y.; F. Harrison, Newark, N. J. (Essex G. C.); R. Heinrich, Newark, N. J.

A committee with full power, consisting of Thos. Hall and N. E. Nash, was sent down last spring to Pimlico Sound; and Gull Island, noted for its splendid swan and geese shooting, was purchased. Gull Island, about one and three quarters of a mile long by half a mile in width, contains about 200 acres. The club also secured by deed over ten miles of marsh guarding all the points, including several small islands that are contiguous to Gull Island, making one of the finest shooting preserves for water-fowl and snipe in the United States. The laws of North Carolina amply protect property owners in the matter of shooting preserves. The club have erected a substantial club-house, and 17th inst., Al. Herilage (jolly old "South Paw") and Capt. Johnson ("Ye Ancient Mariner"), committee, will ship by Old Dominion Line fifteen cots and mattresses, fifteen comforters and pairs blankets, two stoves (one large cooking and one office do.), together with canned meats, hard tack and other provisions too numerous to mention, to say nothing about the ton and a half, more or less, of ammunition.

Capt. Johnson, Al. Herilage and Nash will start the last of next week for the island to get everything in shape for the rest of the boys, who expect to leave Jersey City, Dec. 4, for a three weeks shoot.

The club have moreover some 140 live wild geese decoys, that they purchased and are already on the property. Thirteen of the members will positively be on hand at the dedication of the new club-house. As your correspondent proposes to be among the first on the ground and to stay as long as possible, the big stories told, the wonderful shots made and tremendous bags brought in you will probably hear of anon.

Don't you wish you were going yourself?

JACOBSTAFF.

## PHILADELPHIA LETTER.

It was told by good authority this morning that there is a movement on foot by the members of the West Jersey Game Protective Association, residents of Pennsylvania and the former mentioned State, to try the experiment of importing from England a large number of English pheasants and liberating them in the five lower counties of New Jersey. We cannot see why such a project would not succeed under the management of this indefatigable society, as its members exercise a great influence over the farmers of this section of the State and many of the latter are a part of the association. I understand a subscription will be made for the purpose, my informant expressing his intention of donating.

Should we be blessed with a mild winter following the importation of the birds, and it be succeeded by a favorable hunting season and a stringent law protecting them for five or ten years be passed, we have no doubt that success will follow the efforts of this model association of sportsmen. The English pheasant is in a measure soon domesticated and will readily be drawn to the barn of the farmer for food in severe winters, and if the proper means be taken to thoroughly interest this class of the community in the enterprise much can be gained in this way for the protection of the birds.

Sportsmen who were at Havre de Grace last week and those who are there at this writing are having great sport duck shooting. The bulk of the fowl being killed, however, are red-heads and black-heads, very few canvas-back having yet come on. Shooting, you know, is allowed on the flats at this point only every other day, as the machines or batteries being moored or anchored directly on the feeding grounds, would soon have a tendency to keep the ducks from visiting them at all if presented every day. As it is the number of canvas backs at Havre de Grace is diminishing every year. We heard of one hundred and twenty-five red-heads and black-heads being killed there in one day last week by one sportsman and his attendant.

We were shown this morning a very remarkable Irish setter dog, the property of our mutual friend Mr. John S. Davis, of Philadelphia. Dash, the youngster in question, was sired by Mr. D. S. Glenn, so well known on the snipe meadows in the neighborhood of Philadelphia, and was broken by John Rickhardt. The dog is of a beautiful deep red, handsome, I think, than his sire, and as Mr. Davis tells me wonderfully staunch at his point and as firm a dog to charge at the report of a gun as he ever saw. Mr. Rickhardt, his breaker, still uses a muzzle-loader and insists upon all his dogs remaining steady after firing until he has leisurely re-charged. All his setters and pointers are as firm. Does not the fact of his use of a muzzle-loader account for the steadiness of his animals? Five years ago your correspondent wrote his views on this subject, and as practical illustration here presents itself the article will be reproduced.

"It was remarked to me a few days ago by a prominent

sportsman of Philadelphia that since the invention of breech-loading shot-guns we have fewer steady dogs at the charge than before, and the reason given was that the reloading of the breech-loader took such a short time the dog naturally became more careless on account of the brief space required of him in which to reload, with the gun before advancing; more so also from the fact that the sportsman himself anxious to make a large bag moved forward at once as soon as he had recharged. In old times when we used the ramrod it took some minutes before the sportsman was in readiness, and during this time his dog remained charged and steady until his master had reloaded. This practiced him in obedience and staunchness. In conclusion my friend said to me, "Mark what I say, and I wish you to note it, the man that still uses a muzzle-loader has the best trained dog." I confess I never recall in what my friend said, but do not know why one cannot be particular in the training of the dog's tuition and be more on his guard to have his dog obey. It is a common fault in the hurry of the moment and the excitement of being among a bevy of quail, to push forward too quickly after killing a bird and paying little attention to the dog, now that we can reload so speedily. Our four-footed companions in their eagerness are ever ready to take advantage of the liberty unintentionally given them and forget gradually that part of the education which is so necessary to good sport and success in the field. I find a great many of my friends are breaking their dogs to come in before charging, and they give me as a reason that in cripple shooting, woodcock shooting and the like it is far better to have your setters come to you and charge that you may know where they are before starting them for fresh game. I do not see the utility of the method especially in the case of a retrieving setter or pointer, for in the usual manner of breaking your dog charges at the report of the gun and remains so until he is ordered to seek and bring the bird to you."

Since writing the above I have had many proofs of the correctness of my friend's views, but I would not have it understood that I derogate the use of the modern breech-loading shot-gun. Their invention, however, should make us all the more careful that our dogs are not lost sight of and are kept in as full subjection as in the days when the shot pouch and powder horn were carried to the field.

I am rapidly becoming a convert to the English style of breaking, never to allow a field dog to retrieve. There are, I know, many opponents to this system, but say what you will, a setter will become unsteady eventually if he is permitted to touch a bird at all. Homo.

## THE LONG ISLAND TRAPPED BIRDS.

Editor Forest and Stream:

In the FOREST AND STREAM of November 11, 1880, appeared an anonymous article entitled "Trapped Quail," and signed "A True Lover of the Sport." It was in substance a charge by the writer that a regular business of trapping quail and of the sale, possession and transportation of trapped quail existed on Long Island. It implicated the employees of the Long Island Railroad.

The Long Island Sportsmen's Association, including most of our leading clubs, stands pledged to prosecute all such infractions. We cannot play the part of detectives. We protest against the prevalent custom of making sweeping charges without an iota of proof to support them. We denounce as criminals those possessing such proof who sneak behind a pedastium and have not the manliness to furnish a responsible name.

We demand that your correspondent immediately furnish us sworn evidence of the grave charge made by him or that he forever hold his peace. We will guarantee him exemption from expense. He has rushed into print with full knowledge of the existence of this Association, instead of visiting any of our officers, and we believe his motive was mere covert notoriety and a desire to abuse rather than assist us. We respectfully request henceforth that you publish no anonymous charges against this Association, which you certainly know to be unfounded, but on the contrary that you will insist upon printing the true name of your informant as an evidence of good faith and a duty to us.

By order of the Standing Game Law Committee of the Long Island Sportsmen's Association.

ABEL CROOK,  
Secretary L. I. S. A.

The request that the necessary evidence upon which to base an action be furnished is certainly a fair one, and we trust that it may meet with the proper response. As to the "unfounded charges," we may be allowed to suggest that so long as the illegal traffic in trapped birds, now alleged to be carried on along the line of the Long Island Railroad, is not stopped, criticism of game societies is both well-founded and legitimate. Nor can game societies ever hope to accomplish much if they are content to wait for the information volunteered by outsiders. They must "play the detective" themselves. If the Long Island Sportsmen's Association are not prepared to adopt the initiative in such action, we prefer to ascribe this to some other cause than their failure to recognize the propriety and necessity of their undertaking this kind of work. We know that the Association is young, and not yet, perhaps, in trim for solid work; and for that reason it may demand reasonably that its character be not hastily prejudged. It has an extensive field of effort before it, and we are quite confident that the Association is now in the guiding control of men who properly appreciate what a true game protective society should be, and who must ultimately give character to the society.

**LONG ISLAND TRAPPED BIRDS.**—*New York, Nov. 13, 1880.*—*Editor Forest and Stream:* In reading your editorial of the 11 inst., in regard to my letter-Nov. 6, 1880, one might infer that I conveyed you the idea that the employees of the L. I. R. R., were all willful law-breakers. In justice to those men I would say, that they not being shooters themselves and not knowing trapped game from shot game, might morally be as innocent as thou or I. They have guns offered them cheap and of course take advantage of it. But let them be stopped from buying or selling game on their train and this will all cease. My letter was intended more for the farmers and their boys who really are the guilty parties. I also notice that in my letter I forgot to insert the word rabbits, when I wrote that the boy hands in from one to six quail or partridges. It should have read, from one to six quail, partridges or rabbits, as the case might be. By inserting the above you will oblige  
A TRUE LOVER OF THE SPORT.

so to account for the lawgiver having fallen into the mistake of supposing that the hare and coney were animals which chewed the cud—may have tended to check the practice of hunting, the pursuit of the hare and the wild boar, especially the former, forming generally so large a portion of the hunter's occupation. It does not appear from the Bible that the Jews availed themselves of the service of the dog in the pursuit of game. Possibly the prohibition contained in the seventeenth chapter of Leviticus against eating the flesh of any animal that had been *born*, may have led to the non-use of the dog, a serious drawback to the success of the hunter, and which would necessitate the use of the snare, the trap and the pitfall in substitution for the chase.—*Nineteenth Century*.

[TO BE CONTINUED.]

**PRIZES FOR THE STATE CONVENTION.**—The Prize Committee for the State Convention, appointed by the Long Island Sportsmen's Association, are: Chas. W. Wingert, chairman; A. Eddy, Chas. W. Rodman, Leslie Wild, also Presidents: Abel Crook, G. A. Chappell, Dr. Aten, Dr. Wynne, Austin Appleby, Judge Henry S. Scott, C. W. Hameyner, Chas. E. Fiske, Henry Altenbrand and Samuel S. Conant.

Orders for voluntary prizes should be sent to Chas. W. Wingert, No. 54 South Portland Ave., Brooklyn; or to Abel Crook, Bennett Building, No. 93 Nassau street, New York city. All prizes are to be delivered by March, 1881, to enable proper classification and preparation of programmes and advertisements.

**GUNS IN PASSENGER CARS.**—Different regulations are in force on different railroads respecting the carriage of guns in passenger cars, and these rules are in each case, we opine, made for the purpose of securing to the general traveling public the greatest security and convenience. Some roads do not permit a man to take his gun or rifle into the car with him; and there are several very good reasons why this rule should be enforced, particularly as the difference to the right of others, and particularly of the lady passengers. On the other hand, the sportsman who possesses a costly gun hesitates to entrust it to the tender mercies of employes. But we have traveled extensively over the railroads of this country and have never found any trouble in satisfactorily disposing of our arms and ammunition. A slight fee to the porter or a special word to the baggage-master has always secured from them satisfactory care in handling and keeping in safety.

We received not long ago a letter from this subject, a proof of which we transmitted to the General Passenger and Ticket Agent of the road in question, and below we publish the letter and the reply from the agent:

*Editor Forest and Stream:*

I have returned from a hunting trip in Dakota, and for the benefit of fellow sportsmen I desire to acquaint them with the inconvenience they will be put to should they patronize the line of the Pittsburgh, Chicago and Fort Wayne Railroad.

Should any sportsman attempt to enter the passenger-cars of that company with his favorite rifle, endeared by many long and fatal shots, no matter if the weapon be carefully encased in a neat cover, nor whether the owner of the road, by the officiousness of the individual, but who will prove to be the brakeman, who, in an insulting manner, will order you out of the car, or prevent you entering with your gun, no matter how carefully covered. Now you can imagine the feelings of a sportsman who is obliged to consign his rifle to the baggage-car without check, fee the baggage-porter, and trust to luck that your gun goes through the journey unharmed.

The New York Express arrives in Pittsburgh about 9 o'clock in the morning; all the baggage is changed to another car, and one must be on hand at that hour to take charge of his gun.

Nearly all of the railroads in the West extend to sportsmen many courtesies, and if this road should prohibit sportsmen with uncovered guns, accompanied with dogs, from entering first-class railway coaches it would be to their credit; but to a fatigued traveler, with a gun in a neat case, to be obliged to pass it over to the tender mercies of a baggage-smasher makes one pass a series of resolutions, among which are to rush into the fostering arms of the FOREST AND STREAM, to protect her patron huntsman, and a determination to advise all of your sporting friends who contemplate visiting the West, not to go via Pittsburgh, Chicago and Fort Wayne Railroad.

*Editor Forest and Stream:*

CHICAGO, Nov. 9. I have received your kind note of the 4th inst., with copy of article by "Trajectory," for which I am much obliged. The subject of carrying of guns and fixed ammunition in our passenger coaches has had full and serious consideration, and if sportsmen would contemplate the danger to which a carload of passengers are exposed from such explosive materials, they would not ask us to thus expose them. Sportsmen with guns in cases must always have a quantity of unused ammunition, and should an accident occur to the train this amount of death-dealing material would, or might, seriously jeopardize the lives of not only the sportsmen, but all others in the car. I can readily see the inconvenience to this class of our patrons from not having their guns checked as any other baggage, and I can see no reason why guns in cases should not be checked, except that then the company would assume a responsibility without receiving any compensation for it. My guns are very valuable, and my experience with a borrowed one fully impresses me with an idea of how much a sportsman values his own. I trust you will not publish this as coming from me. I am modest and do not want to see my name in print, but you can rest assured that I will establish any rule which I can do consistently to avoid any cause of complaint such as this gentleman makes.

**FLORIDA RESORTS.**—*Palm*, Nov. 8.—It may be interesting to many of your readers to know one of the most desirable places in all Florida for a hunting visit. I would recommend Bay Port, for I have just received a letter from my friend there, who writes me that the game is very abundant, there having been no hunters there since I was there three years since. Bay Port is situated fifty miles south of Cedar Keys, on a point of land at the mouth of the Wachapreague River, a swift clear stream abounding in fish and waterfowl and other. A mail steamer touches twice a week also two miles from the interior. The Gulf Hammock is just one mile on the east side while the waters of the Gulf bound the west. A little place of eight families, the nearest village, is

twenty miles inland, and the Gulf hammock, six miles wide, abounds in deer, wild turkeys, bear and game of lesser size with catamount and an occasional panther. Mrs. Garrison, of Connecticut, has a very desirable hotel or boarding house. I stopped there one winter, and with her New England cooking, soft beds and homelike comforts I enjoyed myself more there than in any other place in all Florida—and I have spent seven winters in the State, for I prefer comforts combined with sporting to roughing it. There are some three or four bays always to be had free, and pushing out 100 feet, one has to be lively to attend to a line for trout, black bass, jack, red fish, channel bass, red snappers, groupers, sheep heads, sailor's choice and many other kinds of fish abound. I never saw fish in such abundance in any other place in my life. A mile and a half tramp into the Gulf Hammock brings you to the first deer crossing, where deer paths are worn like sheep paths. Two Kentucky gentlemen located their families four years ago on the pine lands, just six miles from here, for the purpose of hunting and raising stock, but the deer and wild turkeys ate up their garden and the panthers and bears ate up their stock, and they abandoned their dwelling, which still stands there empty. Board can be obtained, and is solicited by Mrs. Garrison, at \$4 per week, and she reserves the oranges on the large trees in front of her house for the special benefit of her guests. Among other things he sure and take with you two or three large steel traps that will hold a bear or otter. The otter abound, and those I caught there I sold for \$4 each in Boston. I am sure I could catch a dozen a month with three or four traps. My friend writes he never saw so many semi-tropical birds there before as are there this year.

G. F. WILLIS.

**NEBRASKA GAME.**—The *Omaha Herald* of a late date says: "The fine bag made by S. A. Tucker, representative of the Parker gun, of Meriden, Conn., and J. W. Petty, of this city, on their expedition Monday, shows the possibilities of hunting on Nebraska waters. Famous bays have been made heretofore on the North Nebraska lakes and along the sandbars of the Platte, and this last achievement comes simply to emphasize what they had already proclaimed. In one day's shooting Messrs. Tucker and Petty, hunting along the Platte River between Clark's and Silver Creek, about 115 miles west of Omaha, captured 64 geese, 8 ducks and 12 quail. There is no doubt but that if they had cared to shoot more they could have bagged a hundred birds; but they did not know what to do with all they had, and were not disposed to slaughter uselessly. Neither is there any doubt that they could have gone on the following day and with proper management have brought in a hundred more."

"Mr. Tucker is an enthusiastic and observant sportsman, and his business takes him to all parts of the country, where he has splendid opportunities for shooting. He has studied the feeding grounds and habits of sea fowl, particularly of ducks and geese. In view of these things a *Herald* reporter sought Mr. Tucker's opinion on the hunting along the Platte as compared with what he had seen elsewhere.

"Mr. Tucker said: 'I think there is no place in the United States this side of the mountains where a man can get so large a bag as on the Platte River. I have shot on the Sacramento River in California, on the Currituck Sound, North Carolina, and at other famous localities for years, nearly all over the United States.'

"We find the Canada goose," he added, "as far east as Maine, but they winter as far South as Currituck Sound. The Hutchins and snow geese are not found in large numbers there, and the white front, or western brant, which is also abundant here is very scarce there. I shall try to find, on the coast of South Carolina, white fronts and snow geese winter. They do not get as far East as New York, and I presume they winter in Texas."

**NORTH CAROLINA GAME GROUNDS.**—*Warrenton*, N. C., Nov. 8.—I notice in a recent issue of your paper an inquiry from some Northern gentleman asking where good quail shooting could be found in North Carolina. I answer in nearly every part of our State, and it is very good in this section of it. This (Warren) County is bisected by the Raleigh and Gaston Railroad, and Warrenton, its county seat, a pleasant town of fifteen hundred people, on the railway is thirty miles from Weldon by rail, twelve hours' of New York, and four of Pittsburg, Norfolk and Richmond. It has a daily Northern and Southern mail. It is no great work for a couple of good shots to bag from seventy-five to a hundred partridges in a day. In addition to partridges, which are numerous because of the dry summer, deer are plentiful and three or four fine bucks are sometimes killed in one day by the same party of sportsmen. Squirrels, old hares and coons also abound. The Roanoke River, ten miles distant, is covered with wild geese from December to February. Six or eight varieties of ducks—some very fine—abound in cold waters on our creeks and ponds.

Fox hunting is also one of our best sports. The hunting here, however, is rougher than up North because we have less cultivated land. I have frequently seen five full coveys of birds in a ten acre field. We have but little "posted" land, and every one can hunt pretty much where he wishes. If your Northern friends wish good sport let them come down and they will get it—also a kind welcome. Our renowned and wanting intelligent Northern gentlemen to visit us are patient. Any Northern gentleman who wishes to spend with us a pleasant, though possibly monotonous winter so far as the theatres, etc., are concerned, will be treated just as gentlemen know how to treat each other. Our hotel, the Carolina House, is well kept, and is a model of neatness and comfort. So come to Warrenton, Warren County, N. C., and we will try to make your time pass pleasantly.

SHOT.

**CHICAGO, Nov. 8.**—Good shooting continues in this vicinity, and game seems more plenty than ever before. Mr. George Farmer, of this city, just returned from a week's shoot at Seneschville, where he bagged 175 ducks and two geese of the class known as the "wavy" or snow goose. These, I am informed, are the first of this kind ever killed in this vicinity, their flight when migrating being usually through Montana.

The geese referred to are probably snow geese (*Anser hyperborea*) and not waxies (*A. rossi*).

**CHICAGO—Nov. 13.**—Messrs. Slade, Mears, Cowles and Oliver, of this city, returned yesterday from the woods of Wisconsin, where they had been spending the past ten days. Besides good bags of small game, they had taken a fine twenty-nine deer. The following item, clipped from the *Daily News* of this city, may interest you: "The succulent prairie chicken, which formerly was exported to the East from Illinois, Wisconsin and other States on the alluvial of the Mississippi, the New York journals now state is taken to that

market almost entirely from the prairies beyond the Mississippi. The reason given is that Illinois, Michigan, Indiana, and Wisconsin have become so depleted that they can afford to export but very few. It is stated that formerly the fine bird was abundant all through Northern New England and the Middle States, where it was long known as moor-ben and moor-fowl. The plains and pine-barrens of Long Island and New Jersey were especially its favorite resorts. Unlike its woodland coming in, the bird grows, however, for that it does not withstand the pressure of civilization, and migrated to its present ranges on the Minnesota and Nebraska plains. But may not the New York journals be mistaken as to the falling off in the numbers of the birds in the States named? They forget that the Western people are growing rich, and can now afford to eat that which they formerly were compelled to sell."

J.

**NEBRASKA GAME.**—*North Platte*, Nov. 3.—If any of the sportsmen of the East want a good place for sport there, and it here. Game of all kinds, deer, antelope, elk, ducks, etc. One man killed twenty-four deer, thirty miles from here, up the North Platte, in two days. A man killed two ducks to-day, and brought them into my store, of a kind I have never seen. They have a topknot on their heads two inches long. Can you tell me what kind of ducks they are? Major North came in to-day from his ranch on the Disual River, sixty miles from here, and reports game of all kinds out there thick—the best shooting for years. The Major is the best pistol shot in the West, and killed two deer with his pistol coming in. By the way, thanks for that Dittus powder *cypose*. I am a dealer, and had two dozen cans on hand when I received your issue of Sept. 23. Those cans are now at the bottom of the North Platte River. I could not afford to take the risk of selling them.

M.

The ducks mentioned may have been wood ducks, though it is impossible to identify them from so meagre a description.

**HAMMERLESS GUNS.**—*Providence*, R. I., Nov. 13.—I would certainly advise your correspondent A. B. C. to purchase a hammerless gun. I have used a first quality W. W. Greener hammerless gun (which was made to order through his agent Henry C. Squires) since the commencement of last season. I am perfectly satisfied with its performance, and consider it a valuable improvement over the old style of hammer guns. The relief from the catching of hammers in brush, briars and in boat adds greatly to the safety and comfort of shooting. There is no reason why the hammerless guns should become scarce sooner than the old style. The action plate is made short to increase the leverage and make the cocking easier, but is compensated for by increased thickness of the plate and extension of the rib.

It will probably be but a few years before the breech loader with hammers will be classed with the obsolete muzzle loader. Gun makers and dealers will not push the sale of hammerless guns until their stock of the old style is disposed of. F. H.

**THROUGH TO THE MISSOURI.**—The Chicago and North Western Railway has extended its Central Dakota line to Fort Pierre, on the east bank of the Missouri, in nearly an air line east of Deadwood. The North Western Stage Express and Transportation Company run a daily line of Concord stages for first and second class passengers, between Fort Pierre and Deadwood, and a line of fast express wagons for third class passengers and freight. The distance from Chicago to Fort Pierre by rail is 780 miles, time 34 hours. The distance from Fort Pierre to Deadwood by stage is 180 miles, time 30 hours. Baggage destined to any point in the Black Hills can be checked to Fort Pierre. The railroad carries 150 lbs. free for each passenger. The stage can carry 200 lbs. free. The fare from Chicago to Deadwood is, first class, \$49 25; second class, \$40; third class, \$30.

**IOWA—Dubuque, Nov. 12.—Everything in the shooting line is quiet at present, and we won't have much until spring. Duck shooting was unusually good for a short time, but the weather turned rough so suddenly that most of the boys missed the golden opportunity and only those that happened out at last shot. The party of three killed 130, mostly mallards, in about four days' shooting. Their shooting was done on the river about 80 miles north of here; and another party of four who went later killed some 250, but considering the weather both had poor luck. Jacksnipe were very plenty and could have been killed in large numbers, but all were after ducks. Ruffed grouse are in their prime now, and a good bag can be made by taking a little trouble. Quail scarce and hard to find.**

JULIEN.

**RUFFED GROUSE TREESING.**—*New York*, Nov. 15.—In reading the latest issue of your valued paper I noticed the article from "F." relating his experience as to the habits of the ruffed grouse.

I wish to say that my experience does not agree with his, because when on a shooting trip last season, and while hunting for ruffed grouse, a bird flushed while the dog was yet twenty yards away, and flew to the branches of a tall oak on which he rested for a second and then darted away.

With quail I have had on one occasion a similar experience.

While shooting on the "first" this season I flushed a bevy of quail, one of which I noticed flew to a tree.

It of course remained there only an instant. A. S. P.

**KENTUCKY—Christian County.**—Game of all kinds scarce here this season. The largest bag of quail heard of was made by Will. Gaul and Geo. McLean, twenty-six in one day. Tennessee is reported to have a great many quail this season. Party from here going there in a few days. Will report when they return. F. L. E.

**MALLARD SHOOTING IN INDIANA.**—*Vincennes*.—There has been great mallard shooting here. The storm on the northern lakes two weeks ago sent down thousands of ducks. Three men, J. M. Sheer, Richard Roe and A. McIntz, of East St. Louis, Mo., killed 137 mallards in one evening and morning at Ellison Prairie, seven miles away. There are plenty of snipe and a fair scattering of woodcock.

**CONNECTICUT—New Haven.**—Some of the local sporting men were out yesterday, and returned with good strings of birds. Mr. Charles and Pock secured 31, Penn and Potter 16, a Handen man 15, and David and Henry Cowell, who were out only a short time, 8.

**CAMP STOVES.**—*Salt Lake City*, Nov. 4.—I would like to ask if any of your correspondents have found a good stove to take on a camping trip that will do to put up in a tent and

Irano Yearley, Jr.'s (Conoverville, Pa.) setter bitch Little Lady (Dash II-Roxey), black and white.  
 Dog, by C. S. Saulters, McMurdo, white and black setter dog, by Leicester-Nellie; born May 8, 1879.  
 Mountview Kennel Club's (Columbia, Tenn.) Count Nailer, black and white setter dog, whelped Aug. 27, 1879, by Count Windem-Nora.  
 Against L. D. Himes's Nimrod, black, white and tan setter dog, by Leicester-Nellie; born May 8, 1879.  
 J. Hopkins Smith's (Portland, Me.), Jill, red setter bitch, by Elcho-Meg; born July 1879.  
 Against Mr. Robert Sewell's (New York) Coele.  
 J. Hopkins Smith's (Portland, Me.) Jack, red setter dog, by Elcho-Meg; born July, 1879, & by.

The weather here has not been pleasant since my arrival. Since reaching Vincennes snow has fallen more than once, and it has been cold, raw and disagreeable. This morning opened with a cold east wind, the sky was cloudy and the air raw and piercing. The weather looked threatening and there was every prospect of snow; besides this, the ground was frozen and there was no scent.

After drawing for places, the party left Vincennes at 8 A. M. for a place called the Barrens, since it had been learned that birds were not as abundant on Col. Sloo's land as had been supposed.

Col. Sloo met us with wagons and saddle horses for the conveyance of the party to the grounds. Messrs. Patterson and Luther Adams were chosen field marshals, and with about sixty spectators on foot, and the judges and reporters on horseback, the trials began.

#### THE DERBY.

##### Dick Laverack against Dodo.

The first brace ordered down were Dick Laverack, handled by Mr. Short, and Dodo, handled by Mr. L. R. Morris. They were put down at ten o'clock in the old field, with high covers and woody branks. The ground was gone over and the whole field drawn blank. This was a surprise and disappointment, for when he went over it before the trials, Col. Sloo had moved four bevises. Dick Laverack exhibited the highest speed, but the burrs were exceedingly troublesome to both dogs. At eleven o'clock they were ordered up for rest and to run again.

##### Frost's Leah against Abbey Whinnery.

The second brace at once put down were Frost's Leah, handled by Capt. McMurdo, and Abbey Whinnery, handled by Mr. Short. The rag-grass fields which they entered were very dusty and hard for the dogs. Passing into an old orchard they showed equal speed and not very great speed at that. No birds were found here either, although it was supposed that they were on this beat. By the creek Leah made a false point, Abbey backing her beautifully. In the tall rag-grass bottom of a little vale on the leeward side of a knoll Leah pointed a large bevy, which Capt. McMurdo was ordered to flush. The birds divided, part of them flying along the fence along the woods, and the rest going toward the bottom. Leah feathered and flushed again. Later Abbey made a capital point and after allowing her to stand staunch some time the birds were sprung. Going forward Leah made a magnificent point on five birds and Abbey backed her in grand style, the two making a fine picture, which was appreciated by all present. Leah afterwards in running down the wind flushed a bird in the weeds. At one o'clock the dogs were taken up and the party repaired to luncheon.

After an hour and a half work was resumed in a splitting snow. Abbey won the heat.

##### Peep o' Day against Daisy Laverack.

The third brace were then put down. Peep o' Day, handled by Mr. Whitford, and Daisy Laverack, sister to Dick Laverack, handled by Mr. Short. Peep o' Day was very fast, and proved a fine open ranger with superior pace and style, and capable of good work. She was hunted last September on prairie chickens in Minnesota. The brace passed a large bevy, which the judges walked up to and flushed. The birds pitched into a thicket, where Peep o' Day pointed them. Daisy showed herself to be a smart, sharp, busy worker and quick in her turns. She pointed the birds in the thicket; and again a single bird, which was shot at and missed. Daisy dropped.

The brace dropped in the open; and Peep o' Day flushed a bird in the thicket. They were a wonderfully fine pair, and entered excellent work. It was a well contested heat, considering that the ground was a hard one for the dogs. Daisy is a superb cover dog. The dogs then passed into a sedge field, which was drawn blank, Peep o' Day making a false point and a flush when running up the wind. At 2:40 o'clock, after a grand trial, the heat was closed and the brace taken up, Daisy being awarded the heat. Mr. Short was now cheerful, as he had reason to be.

##### Bruce against Abess.

The fourth brace put down were Bruce, handled by Whitford, and Abess, handled by Davidson. Abess was out of sorts, having a bad diarrhoea, and needed urging. In the tall cover Bruce pointed a bevy, which lifted and lit twenty yards away. Bruce flushed, and both dogs were sent into a deadening. Bruce showed a fast gait and good style. Among the logs he flushed a bird in the dry leaves, but dropped to miss. Bruce again pointed three birds in a brush heap, Abbey backing him in grand style. During a rapid spin in the open Abess proved herself a fine quarterer, and under better control than Bruce, who at one time ran fur. The dogs were taken on a mile of fearful cover of high weeds and standing corn, and very dusty. Bruce pointed a bevy in the high weeds. They ran. He then roared, and pointed again. There was here a fine exhibition of sharp all-round handling. Abess made several flushes going down the wind and false points. Bruce pointed three birds in a brush heap. Abbey backing him and Whitford was too quick in claiming the point. Three birds were marked down in a wood, but the dogs failed to find them. Abess potted about, evidently out of condition, and Bruce failed to mind and did not work to the gun. Abess pointed in the briars, but she failed to trail and find. She was kept on the point for Bruce to back. The brace was taken up and Bruce awarded the heat.

It was now dark, and the party, men and dogs, returned to the hotel. The annual meeting of the club was adjourned to Tuesday night.

#### SECOND DAY.

VINCENNES, Ind., Nov. 10.

The weather to-day was warmer and more favorable, with a wind blowing a little south of west. The ground worked over was on Col. Sloo's farm, a clay soil.

The farm was reached about a quarter past ten.

#### Count Noble against May Laverack.

Of these Count Noble was handled by Mr. Sanborn and May Laverack by Mr. Short. The dogs were put down in the rag grass, and Count Noble, having the wind in his favor, soon pointed, and then roared round a bevy of birds. May was called up to back, moved in from the place where Noble pointed and stood staunchly; and a moment later Noble made a point on a large bevy on the far side which were scattered in a branch in the grain field. Noble has a fine head and is a powerful dog. The little bitch and Noble were given a spin in the grass field, and she proved herself a rapid flyer, superior in pace and quartering, exciting the admiration and surprise of all at her speed.

The dog being in a grain field, Noble at once ran up the leeward side of a branch filled with briars and weeds, and seventy yards further on came to a point in splendid style. May was called up to back him, and she moved in, when Noble settled down in the grass on the point. Sanborn flushed and killed, Noble retrieving it and fairly locating another bird which had been winged and had fallen in the open; May then flushed and Noble made a flush in the briars, but dropped on the point and remained staunch in a very awkward position for five minutes, when three birds were put up. The brace were down twenty minutes, Noble winning. He is a wonderfully fine dog for his age, level headed, with good nose and displaying much brain power.

#### Dodo against Dick Laverack.

Dodo, handled by Morris, and Dick Laverack, handled by Short—the first brace run yesterday—were again put down by this same branch where several birds had been marked. They had several trials, Dick showing himself the buster worker. Dodo lacking ambition. After the brace had been down half an hour the judges decided that neither could win, and ruled them out. They were only ordered up yesterday after running a long time to find both poor.

#### Little Lady against McDuff.

At quarter past eleven o'clock Little Lady and McDuff were put down, the former handled by Mr. Sanborn—against his own dog because he trained her—the latter by Mr. Short. A spin through a grass field showed that Lady, the faster of the two, had the better style, though she held her head a little too low. Running down the wind a flush was on the edge of a deadening, and Lady having been sent across the fence into some briars flushed a bevy which were marked down on the hillside in the deadening. McDuff appeared somewhat out of sorts and did not work as well as had been expected. A bird was flushed from a fence corner by the spectators, and Lady pointed where it had been. The dogs having been sent into the briars McDuff made a point in the ravine. Soon after he pointed fur and Lady refused to back. A little later Lady flushed a bird along the fence. At 12:30 the dogs were ordered up by the judges with the privilege of ordering them down again later.

#### Count Nailer against Nimrod.

Count Nailer, handled by Dove and Nimrod, handled by Short, were now put down. Nailer is a litter brother to Nailer by Count Windem out of Nora. A short spin in the grass field showed that the dogs were about equal in pace, style and quartering. A bevy, moved in the deadening by the crowd was marked down in the bottom of a ravine, where Nimrod flushed three birds, the rest having apparently run into the standing corn. A large bevy was flushed by the noise and skinned along the corn. It was followed up, and on the hill in the corn Nailer made a rattling down-wind point, which was shot, however, count. At the side of the ravine Nailer pointed fur and Nimrod at the bottom made a false point. On the hill-top, near a heap of logs, Nailer made a point and Nimrod, who had been called up to back, also pointed what proved to be three scattering birds. The dogs stood beautifully, and the picture was as pretty a one as is often seen. When the birds were moved Mr. Short killed two at one discharge of the gun, but, as retrieving did not count in the Derby stakes, the birds were not retrieved. Both dogs now made several flushes. At 2 o'clock luncheon was served, and at 2:30 the dogs were again put down in the same gully, lower down. In some high corn a point was scored for each of the dogs, and at 3:20 they were taken up. Nailer being awarded the heat. The weather had now become much colder.

#### Jill against Cecile.

Jill, handled by Mr. Taft, and Cecile, by Mr. Moore, were next put down in corn. The crowd flushed a large bevy, which flew a long distance. The cover here was very bad, and the place a hard one for the dogs to work in.

After making some flushes, the brace were ruled out, having shown no style or quartering.

#### Little Lady against McDuff.

Little Lady and McDuff were marked down in high cover where some birds had been marked down. None were found, however, and moving back toward the starting point, Lady made a flush. The dogs were now ordered up as it had become dark. McDuff was given the heat. A drive of seven miles back to town was a tedious one. The roads were very bad and the transportation poor. The judge's wagon broke down, and many of the spectators had to walk the whole way in. The grounds are inconvenient, as it takes too much time to reach them.

There was a large attendance at the meeting of the National American Field Trial Club held at University Hall at 8:30 in the evening. Mr. C. H. Raymond occupied the chair. The Secretary read the minutes of the meetings of November 24, and 27, 1879, which were adopted. Mr. Raymond stated that Mr. Sanborn had selected the grounds for the present trials and that the club had every reason to congratulate itself on the number of entries. The Secretary's report was read and adopted. The Treasurer's report showed a balance of \$552.48 on hand, exclusive of the entrance fees. The election of officers was next in order. It was moved that a committee of three be empowered to make nominations. Chair appointed Messrs. Jarvis, Morford and Rowe, and the following officers were elected for 1881: President, P. H. Bryson, Memphis, Tenn.; First Vice-president, Luther Adams, Boston, Mass.; Second Vice-president, Henry Bishop, Louisville, Ky.; Treasurer, Jos. E. Denon, Columbia, Tenn.; Executive Committee, J. H. Morford, N. J.; L. H. Smith, Strathroy, Can.; E. C. Nichols, Battle Creek, Mich.; P. Henry, Clarksville, Tenn.; M. C. Campbell, Spring Hill, Tenn.; Board of Appeals—C. H. Raymond, N. Y.; Anthony Higgins, Delaware City, Del.; John Fottler, Boston, Mass.; Wm. Jarvis, Claremont, N. H.

Committee for field trials next year: The President, the Secretary, and Messrs. Bishop, Campbell and Henry.

Mr. Bryson said that for several reasons the trials could not be held again in Vincennes. There are more birds further South. Mr. Dove suggested that some place south of the

snow line would be better, as the birds were so often destroyed from this cause in the North.

Mr. Henry said that the trials could be held later in some more Southern locality.

Mr. Adams moved and it was carried that the committee report through the sporting press by Feb. 1 the selection of some grounds which would be suitable for the trials.

Mr. J. H. Whitman was appointed a committee of one, with power to add others to it, to arrange special rates with railroad and express companies.

Mr. J. J. Snellenburg suggested a change in the field trial rule with regard to the withdrawal of the winner of a heat. The matter was left to the standing committee on field trials.

The following were elected members of the club: J. H. Whitman, Col. A. G. Sloo, Geo. Fox, L. D. Runsey, Isaac Yearley, Jr., Wm. B. Banks, J. B. Hendricks, J. W. Orth, B. F. Wilson, D. McKinney Lloyd, W. H. Drane, Dr. H. T. Drane, Ed. Drane, T. F. Henry, W. T. D. Orth, Frank P. Gracey, Walker Williams, Dudley Ware, E. S. Wanaumaker, John H. Wise, Clarence K. Drane, Dr. Jas. Rodman, Geo. Waddington, D. C. Burgenndhal.

At eleven o'clock to-night there is a heavy fall of snow, which if it continues will interrupt the trials.

#### LATEST NEWS FROM THE TRIALS.

VINCENNES, Nov. 17.

Snow is still falling and it is impossible to go out. There are now two inches on the ground.

#### WHAT IS A COCKER?

Editor Forest and Stream:

Your correspondent, M. B., has, with his usual acumen, hit the nail straight on the head in his communication which appeared in your last issue. Every one, whether interested or not in the breed, must be aware that we are at present navigating our cocker ship without a rudder, and are hopelessly floundering about. The rudder we want in this case is a standard to breed to, and we must have it, or what is the use of breeding cockers for exhibition purposes, and filling the benches with a variety of miscellaneous class under the name of cockers. All of our English authorities steer clear of any definite description of a cocker, though clumber, Sussex and black spaniels are treated at length, and specified points given for the guidance of breeders and judges. I think it may be accepted that a cocker is a small dog, spaniel in shape, and, being the case, the line of demarkation is evidently one of size or weight, the latter being the easier point to arrive at with accuracy. Beyond that we must of course have the full details given as to the make, shape and style of dog, with a code of points indicating the value of each property. Color, as in English setters, is a matter of fancy, and while on this subject I would like to ask where the authority is to be found for the statement of M. B. and others I have conversed with, that Welsh cockers are lemon and white. Welsh cockers, to the best of my knowledge and belief, and I think Stonehenge and Mr. Dalziel will bear me out, are liver-colored, while the lemon and white is to be found in the Norfolk spaniel.

I am certain that cocker breeders will agree that a standard must be made, and the sooner the better; and now how is it to be done? My notion is that we should get up an American Cocker Club, and that that club should adopt a standard and do all in its power to advance the breed by a combined effort. There is no surer and more direct manner to bring any given breed prominently before the "doggy" public, and I speak from experience gained in England, than by having the interests of the breed looked after by a properly constituted club. It is possible that some breeders may fear that such a club would be worked to the advantage of certain parties, but any such idea is ridiculous, and perhaps I had better outline the work which falls within the province of such a club. First of all, a Secretary *pro tem.* is requisite, and I would nominate Mr. Geo. B. Macdougall to fill that position, if he will kindly accept it. All who are in any way interested in the breed should at once send him their names, so that communication may be established with them. From the list thus obtained a committee of say half a dozen should be struck—it would not be possible at present to hold a meeting and elect a committee, but the leading breeders are sufficiently well known to enable the New York residents who could meet to get up a committee to hold office until the annual meeting, which should be held here during the Westminster Kennel Club show week. This committee should without delay draw up a cocker standard and rules for the government of the club, and the enrollment of members should be in order. The annual dues should be small, say \$2 or \$3, so that no one could complain of being excluded by a high tariff, and this money should be used for the purpose of giving special prizes or augmenting premium lists at the various shows throughout the States and Canada. A list of known competent judges of the breed should also be compiled, and when money is added to any premium list it should be with the specific understanding that a special judge must be selected from the list so made up. Dog show committees will always gladly concede this point if thereby they can have better prizes to offer and be assured of the support of the prominent exhibitors. Beyond this the club would in no way interfere with breeders, so that it will be seen that all the acts of the committee are fair and above board, and the programme of the club managers being made public with the premium list for each show, every member of the club would be on an equal footing when it came to the judging.

Time, ink and paper have been wasted long enough in discussing the question "What is a Cocker?" and it is high time an answer was supplied, so I hope next week to read Mr. Macdougall's acceptance of the position of Secretary *pro tem.* when it will be in order for all of us to send him our names and so start the machine and have things in running order for the shows in 1881. In my small way will do all I can to induce my friends to join whether they are cocker men or not, for it is not necessary for a man to own and breed cockers to procure admission to such a club as I propose. I would not get into a dog show without a certain weight, I favor 25 lbs. for bitches and 28 lbs. for dogs. It might be advisable to call all above that weight field spaniels, either that or divide cockers into large and small classes at somewhere about the weights stated.

LEAM.

New York, Nov. 12.

EASTERN FIELD TRIALS CLUB.—A meeting of the officers of the Eastern Field Trials Club was held on Thursday the 11th inst. It was resolved that the money collected for Mrs. Tlestone, amounting to \$791, should be given to her with a copy of the resolutions passed by the club at the time of Mr. Tlestone's death.

It was reported that there were at least two hundred and

distance had seen the duck and tried to obtain him. By this time they are near here. I hear the whistle of the wings. The trusty breech-loader comes up like a feather and the charge leaves the muzzle. Yes, he dropped. I had aimed some six feet ahead, and by the time Zoro had retrieved the duck a faint burrah was borne to my ears. A true sportsman had congratulated me. When the boys came in two were at the tents and met me, immediately picking up my duds and allowing me to walk in with not a shell's weight. We had scolded. The duck was twenty-nine inches long, over forty the extent of wings, and weighed over five pounds, and often now I glance toward the big mallard.

BERT. NAVARRE.

"NESSMUK" writes: "I am among the oldest canoeists in the United States. Have a record of over forty years, and am frosted cast iron for the double-bladed paddle as against oars or canvas. Shall go through further and faster next season than I did this, and with a longer, larger canoe, say of twenty-five pounds weight and of racing model. I take no guide—I am a guide myself wherever I can get a clean four inches of water. I am never half as much at home and never find myself so easy as when I am lost in one of our forests, where there is no track or trail, save of the wary natives I there meet."

TEXAS—*Indimola*. Nov. 6.—Game now in abundance and continually arriving. Saw several flocks of swan this morning, the first of the season, and a great many geese and brant. Was out this morning close to town and bagged one fine goose, one brant and a brace of fine ducks, and was not gone from home altogether over one hour and a half. Every cold snap there is a regular fusillade at the passing fowl—every one who owns a gun or musket turns out. G. A.

SHEEP VS. DEER.—It has been a frequent complaint in Scotland that a potent cause of many evils, especially depopulation and high-priced wool, was the large extent of the lands devoted to deer forests instead of to sheep culture. Attention has been called to the subject by a discussion in the *London Times*. In 1873 a select committee of the House of Commons was appointed to inquire into the merits of the case, and that committee reported that the evidence bore out none of the charges.

—The *Scientific American* of last week contains two full-page illustrations of Captain Eads' proposed railway for transporting ships with their cargo across continents. Captain Eads claims by his plan to be able to take loaded ships of the largest tonnage from one ocean to another across the Isthmus of Panama, as readily as can be done by a canal after the Lesseps plan, and at a much less cost for engineering construction.

—No one can be sick if the stomach, blood, liver and kidneys are well. Hop Bitters keeps them well.

## The Rifle.

PLEASE VISIT THE RANGES—*Charleston, S. C.*, Nov. 8.—Seeing what Mr. Murphy, of Worcester, has done in shooting, I send you this: Oct. 16, 45 shots, one hundred measured rods, at 10-inch bullet-eye, other ways third-class target, he made 82 bulls, 10 centres and 3 inners. Nov. 1, 40 shots, 500 yards, at 8-inch bull and four-foot target. Score—29 bulls and 8 centres; 22-inch, 2 inners. One outer the first shot.

The shooting was done by James Pilex, of Otsego County, in the presence of ten or twelve persons. He has now returned home. Sight on heel of gun. He used Remington Creedmore rifle, 107 grs. Hazard, 550 bullet, his gun kicking so one would think it was impossible to hit anything across a barn-yard. He did his first shooting at long range this summer; first score was 179, last 217. It was splendid off-hand shot. Will sight his gun on anything, distance unknown, quickest of any man I ever saw. When he shoots he always paces to see how far, and calculates his elevation from this. J. B. H.

### NEAR-SIGHTEDNESS.

IN your issue of October 21 I see a communication from "Phila" on the subject of near-sighted persons shooting with glasses. Having had much experience as a near-sighted shot for the last seven years, and as your correspondent's case seems so similar to my own when I first began to use the glassy ovals, I venture to give a small bit of personal history which may probably interest other near-sighted sportsmen.

From earliest childhood I have been an ardent lover of every kind of shooting. As a youngster, too small to walk, I followed the hunters on my pony, my older friends kindly pulling down the rail fences for my passage. Near-sighted! I never thought of it. Grown older and swinging my light squirrel rifle I found I could kill more than my school-mates, but one or two of them could always beat me shooting at a mark. I would not admit even to myself that I was near-sighted. In fact I doubt if such a thought ever entered my head in those days. Yet how distinctly I even now remember what a large, dim, hazy look each scrap of white paper assumed that was put up for a target. In 1873 I began my college course in New York city. Troubled in copying the intricate formula from the board, and seeing others with glasses, I borrowed a pair from a class-mate, and oh! wonders! I hadn't imagined any one could see so plainly. Returning home I resumed my hunting and target practice, always using glasses, feeling convinced it was the only way for me ever to become an excellent shot. For two years how it troubled me to see that front sight plainly; a thing very easy to do without the spectacles. I painted it every color of the rainbow. But in the two years' practice I had trained my eyes so as to see the naked gray sight on a long Springfield rifle as plainly as any one could wish. How well, my winding many successive prizes can testify. In my earliest experiments I discarded eye-glasses completely, as, no matter how good, they are utterly unfit to shoot with, jumping off at every explosion of four drams of powder in shot-gun or rifle, and, worst of all, by actual experiment causing the bullet to always go wide of the mark—several inches at 100 yards, the variation increasing or diminishing as the distance became greater or less. My belief is that all glasses which hang diagonally across the eye cause a certain amount of

refraction, which is the case with almost all eye-glasses. Perfect sight can only be obtained by looking perpendicularly through the very axis of the glass. Good spectacles are all arranged according to this fact. "Phila's" glasses may all be badly ground, which would of course cause much aberration of sight. Yet I think the difficulty lies in their not standing squarely across the centre of the eye.

I own a number of rifles, shot-guns and pistols, and shoot them constantly, and from my long thirty-four inch to my short three-inch Derringer, I have found, by repeated contests with others, that there is no variation in the amount of elevation necessary between good ordinary eyesight and my eyes assisted by glasses. I have sighted many rifles for friends, and have repeatedly taken up a gun never in my hands before and shot as well as with my own, showing my sight was not made abnormal by the use of glasses. Pardon me for my intrusion on your valuable space. My only excuse for speaking so much of myself is the hope that it might aid and encourage others afflicted as I am. OCNOLLEE.

Five years ago I accidentally discovered that I had become near-sighted. So gradually had the focal point changed that I was unaware of it until I happened to try the glasses of one of my near-sighted friends, when lo and behold! a brighter world lay before me. Previous to that time, when in the woods, I experienced some difficulty in judging distances, and detected myself squinting continually, as that seemed to clear the vision somewhat. At the ordinary reading distance my eyesight is perfect, apparently, but beyond that a glass about No. 30 is necessary to give me a clear outline of anything.

In shooting with a rifle or gun I always use glasses, but have never experienced the difficulty that "Phila" complains of—viz., shooting over; and, if he will use his glasses whenever he does his rifle, I think with properly adjusted sights he will have no trouble. I have made and used several varieties of fixed rear sights, but the very best one I have ever had I have just purchased from Wm. Lyman, of Middlefield, Conn. The front sight viewed through this, as well as the object aimed at, is rendered perfectly clear.

This sight is one of the many good things which I have become acquainted through the columns of *FOREST AND STREAM*. As a relief from the cares of business, it is hailed from week to week with delight. Aside from the information that interests all lovers of rod and gun, it stimulates a desire for more out-of-door life and sensible recreation. Long may it wave. D. H. S.

Riceport, Conn.

### HUNTING RIFLES.

IN your issue of November 4 I read a letter signed "Otto," with reference to the Kennedy magazine rifle, and claiming an undisputed superiority for it in its class as a repeating arm. I have very lately had an opportunity of inspecting a Kennedy rifle and of comparing it with one of the Winchester pattern, but failed to see any advantage in the new arm that is not possessed to an equal extent by its older rival, and am inclined to look upon it as a copy in which the modification of parts is so trifling as hardly to constitute a difference. With the comparatively small powder charge used with both these rifles (small in a sporting sense), I do not fear any chance of one of them on either system bursting at the breech; and should any accident occur from the explosion of a defective cartridge, the results would be more serious in the Kennedy than in the Winchester, as the sliding lock cover in the former is closed when the rifle is fired and the escape of gas is retarded; while in the latter the lock cover remains open, and the gas can escape freely into the air. Were I buying a rifle I would prefer the old well-known arm, whose performances in skilled hands are of world-wide renown. I do not think that the limit of excellence has yet been reached in repeating arms, and as a hunter I would welcome any improvement that would lead to the greater efficiency of the arm. The small charge of powder and consequently low velocity of the projectile is the weak point of the repeater, and I would suggest to the manufacturers to direct their attention to the production of really powerful Express rifles on the repeating principle—arms that would compete with the performances of the English Express rifle, and capable of being safely used with large charges, say 135 grains of powder behind a 300-grain bullet in a bore of .5 inch.

Constructed as the present repeaters are, a charge like the above might be dangerous, as any flaw in the parts of the mechanism sustaining the breech-stopper might cause it to give way and give rise to an accident. The breech stopper itself does not entirely close the barrel, as any one can observe for himself, a ring of the metal of the base of the shell being plainly visible and unsupported, and this in some cases might give way and allow the gas to dash back. To obviate anything of this kind, I would recommend that the metal of the cartridge shell should be encased in that of the barrel, the breech end of which should be recessed to include the flange of the cartridge, while the top of the breech-stopper or bolt should be made mitre-shaped to fit into this recess and effectually seal the end of the bore. An arrangement of this kind would give perfect safety in the event of the bursting of a weak cartridge. It remains to be seen to what extent the present breech mechanism will be able to resist the backward strain of a heavy charge, but in every case some arrangement should be added, that in the event of anything giving way, the bolt be kept from being liable to fly back in the fire's face.

To fully secure the advantages of the Express system, such a velocity must be communicated to the bullet that after the penetration of any soft body, it should break up and the component fragments fly forward like a charge of buckshot just after leaving the muzzle of a gun, and convert the parts lying in their path into pulp. I have seen a tiger drop stone dead on being hit by a bullet fired from a Henry Express rifle, using five drams powder, and on opening the carcass hardly a trace of the metal of the bullet could be found, but the work done inside the animal was terrific. The lungs were pulped into a semi-fluid mass that could be ladled out with a spoon. This was with a soft-skinned animal, and done with a soft metal bullet with large central cavity. Against thick-skinned game the hardness and cavity of the bullet must be modified, the cavity in some cases being entirely suppressed.

I am certain if your rifle makers would turn their attention toward the perfecting of a powerful repeating Express rifle that it would meet with a ready sale in all parts of the world where the sport-loving Anglo-Saxon seeks the excitement and pleasure of the chase. GUNNER.

### MILITARY SMALL-ARMS.

BRIE-GEN'L S. V. BENET, Chief of Ordnance, U. S. A., has just made a very interesting report of the doings of his department during the past year to the Secretary of War. In addition to the routine notes of progress he gives very fully his views about the advantages of a really National Guard. Speaking of the Frankford Arsenal ammunition he says:

"It has for some time been my intention to recommend the adoption of a reloading cartridge as an economy, and the trials and experiments conducted with that in view will soon enable me to reach a definite conclusion. The present long-range excitement points to heavy charges and severe recoil, but the experience of other armies and a little reflection convince me that for Army purposes the best average results can be obtained by keeping the charge within moderate limits."

The report shows that there were manufactured at the Springfield Armory during the fiscal year, 20,357 rifles and carbines, and on this subject Gen. Benet says:

"The operations at the armory have been conducted in the admirable and satisfactory manner which always characterizes the performances of every duty by Col. J. G. Benton, commanding. The reputation of the work there done has never stood higher than now, and it can safely rest on the deserved excellence of its arms, known and recognized everywhere."

"On the 1st of July there were in store as a reserve supply, including the above number made, only 22,979, showing that the number on hand at the beginning of the year had been well-nigh exhausted during the twelve months, by issues to the Army and militia, etc. At this rate of manufacture and consumption, the day is far distant when our reserve supply of arms will have reached what all nations consider a proper one."

"At its last session Congress made an appropriation of \$300,000 for small-arms, being an increase of \$50,000 over the appropriation for the year previous, and I indulge the hope that the amount will continue to be increased from year to year until the country is better prepared for any unforeseen exigency."

"The Springfield rifle continues to give very general satisfaction, and the complaints made against it are not greater in number nor more intense than in the case in other armies the world over. I am satisfied that as a single breech-loader it has no superior as a military arm, and that it will not be superseded by anything short of a magazine gun. The latter will unquestionably be adopted, and we will as certainly do so, as not many years ago we adopted the revolver. No magazine gun has yet attained that perfection and completeness that will warrant its general introduction in the army. The Hotchkiss has met with reverses, due to hasty manufacture and imperfect design in some of its minor parts, which can hardly be charged to the invention. It is believed that these defects, in which the mechanical principles of the invention were not involved, have been corrected in the new model, and more favorable results may now be anticipated. The manufacturer's experience with this gun proves that difficulties are ever to be met and overcome in perfecting a new invention that has to stand the severe test of field service. As a rule, a first-rate military arm must be of gradual growth; and be finally made up of successive improvements rendered necessary to correct defects developed in the hands of the soldier. The principle of the Hotchkiss is a good one, but there seems to be some prejudice existing in our service against the bolt system and its awkward handle that time and custom may overcome."

"The calls for magazine guns by our cavalry, the improvements being made in these arms, and the necessity of extending the inquiry in order to get the best, induces me to recommend that an appropriation be made to enable this department to further study and test by trial in the field a few of the best magazine systems."

"An appropriation of \$500,000 for the manufacture of the Springfield gun during the next year is deemed a reasonable one. The strongest and most convincing argument for a continued peace is being thoroughly prepared for war. Our armories and arsenals fully stocked with war material, our fortresses well armed, and our militia well organized, armed, and equipped to march shoulder to shoulder with our small body of regulars, constitute the best peace offering we can present to the world. In the matter of preparation economy during peace means extravagance in war and, as a financial problem, the wise and timely expenditures of the present will be the true economy."

As an appendix to the report there is an account of a series of trials on the extreme range of military small-arms. These trials were conducted by Col. Benton and Capt. J. E. Greer. These trials were undertaken and prosecuted under instructions from the Ordnance office, and the work has been performed with a great degree of thoroughness and completeness. These reports will amply repay careful perusal by those in the Army and out of it who are interested in rifle firing, and much of the data given will be found new and useful. The use of the telephone in determining the time of flight of projectiles, especially at very long ranges, was first made at the Sandy Hook Proving Ground, and its application in these experiments was found most valuable and important.

Among Captain Greer's conclusions are the following: As a result of these trials it will be seen that the service rifle with service cartridge is amply sufficient to disable and possibly to kill up to nearly 3,000 yards; that the same is true of the carbine using the rifle cartridge; that the 500-grain bullet fired from any rifle with a twist sufficient to give the necessary rotation will range nearly 3,700 yards; that variations in weight of powder charge within ordinary limits have no effect on elevation at extreme ranges, velocities approximating to each other; and finally, that with a cartridge prepared as at present, but with an increased weight of ball, the service rifle may be made, if desired, as long a ranging arm as any known.

ANOTHER KANSAS SLAUGHTER.—*Charlottesville, P. E. Island, Nov. 4*.—We are having an inquest to-day over a dead marker, shot in the usual manner by stepping out from the target while shooting was still in progress, and Jas. J. Heitz was pierced with a bullet. Capt. Longworth who fired the fatal shot tells his version of the manslaughter by stating that "Nov. 3 was set apart for the band's annual shooting match, and as it is attached to the 82d Battalion, myself and Lieut. Daniel Stewart, attached in command. When I went to the range before the match commenced, I found there were no signals. I immediately sent to town for them. When they arrived they were put in the proper places and given to the proper parties, and the match commenced—deceased, acting as marker, received the signals which the marker uses. Everything went on well. When the bandmen had finished shooting at the 500 yards

See adv. of gun stolen from Mr. Wm. B. Hall, of Lancaster, Pa.

J. D. F., Pittsfield, Mass.—My pointer, three years old, holds his head on one side, shaking it very frequently, and quite often scratches his ear with his foot. Sometimes while doing this it appears to give him pain. His eyes are running more or less, and I sometimes think his hearing is affected. Ans. Your dog has cancer. Exercise care in the matter of diet. Cleanse the ear with tepid water, and then pour in a little weak lead water once a day and hold it there for a minute or two.

L. E. W., Hayt's Corners.—I. We know nothing of the man's race; nor would we make any distinctions if we did. 2. We believe him to be reliable, in the same way that all the established houses who advertise with us are reliable. 3. We know of no pawnbroker to whom we can refer you for second-hand guns, and would advise you to stick to regular gun dealers if you want square treatment. 4. The trouble is not with the revolver, but with the hand and arm holding them. 5. Patched bullets are not used in Winchester rifles.

G. A. C., New York.—1. I have a very fine double gun, muzzle-loader, 22-bore, 33-inch barrel, 7 lbs. weight, what would be the proper charge of powder and shot for it? 2. Would a 10-bore, breech-loader, 9-lb. gun, be as safe as a 12-bore breech-loader of the same weight? 3. If I have my 10-bore, 9-lb. breech-loader choke-bored will it be as safe as before? Ans. 1. 2½ drams powder and an ounce of shot would be a good charge, though three drams might be used without unpleasant effects, we think. 2. Practically as safe, though of course the barrels of the 10-bore would be a little the thinnest. 3. Yes.

W. M. B., Phila., Pa.—My setter dog, three and a half years old, broke through the ice two years ago and was shortly afterward very bad with the distemper. He was cured of that, but was left

with what was at first a very mild twitching. It has grown on him, and now while at rest or attempting to sleep he becomes quite violent, throwing his legs about, barking with his mouth shut. He is worse when heated, and in warm weather. The trouble seems to be mainly confined to the right side, limbs and all. Ans. Your dog has chorea or St. Vitus dance, a result of distemper. There is little hope of a cure. He may be benefited by giving him ½ grain of nuxvomica, with two grains quinine three times a day for a few weeks.

J. M., Chicago.—My setter pup, nine months old, is troubled with diarrhoea. She is very much emaciated, her coat looks rough, eats sparingly, and her eyes run to some extent and they do not look very bright. I treated her for about ten days with fifteen drops tincture of catechu twice a day, and fed her on such food as boiled milk, beef tea and a few scraps from the table. She seems to be getting better, but is not gaining flesh. Judging from her general appearance when I received her, I concluded she had worms, and I accordingly gave her a small dose of pink root tea, but as she did not pass any I gave up the idea, and now come to you for advice. Ans. As long as the diarrhoea continues, use as an injection by the bowel fifteen drops tincture of opium and fifteen drops tincture of catechu in a teaspoonful of starch water. Also, give half a teaspoonful of castor oil in a little warm milk twice a day.

S. F., Hollidaysburgh, Pa.—While out hunting recently I shot and wounded a rabbit. Knowing that the same could not go a great distance I sent my setter dog after him to retrieve him. Waiting about five minutes, and the dog not coming back, I started in the direction whence I supposed the rabbit had gone and, coming to a fence, I saw my dog standing half way up in a field grown partly over with weeds, having the rabbit in his mouth. Calling on my dog to fetch he still stood there, not making any motion to come in.

Thinking something was wrong I started to investigate and, coming near the dog, I found that he was pointing some game. Walking up to him I found a covey of quail which he had pointed, all the time with the rabbit in his mouth. Have you ever heard of a setter or a pointer dog doing the same? Ans. Yes. We have seen several dogs point with rabbits in their mouths. We, however, are opposed to allowing either setters or pointers to retrieve or even point fur.

SEBASTIAN, Columbus, O.—I have a Newfoundland dog which has been lately suffering from a peculiar trouble with his ear. I noticed one morning that one of his ears was badly swollen. I took him to a physician, who lanced his ear, taking from it quite a lot of blood. This operation was repeated three times in four days. At the second operation about half a goblet of blood, somewhat clotted, was drawn. To-day I had his ear lanced again, and a wooden clamp, made of two sticks tied together, fixed at the ear to stop the flow of blood from the arteries. I am anxiously awaiting the result of this. In case the ear falls again (it usually swells to about the thickness of an inch or more) what shall I do? Some fever attends it, and a general feeling of sickness and torpor comes over the dog. He is very large, usually very active. Age, five years in February. Ans. There is probably an aneurism of the ear lobe. Pressure after evacuation should be used, and probably an injection of some astringent—as per-sulphate of iron—into the cavity.

—One of the firm of John H. Pray, Sons & Co., wholesale and retail carpet dealers, Boston, Mass., is, or claims to be, a sportsman, and he will at all times take great pleasure in doing a favor for a fellow sportsman in want of any kind or grade of carpeting, rugs, etc., etc. Correspond with the house, or call and see him, and see if he means what he says.—Ad

J. Stevens & Co.'s Celebrated Arms

DALLINGTON, Wis., Sept. 27, 1890.

Dear Sir:—I received the 22 cal. gun you sent all O. K. I did not expect to get an octagonal barrel and globe and peep sights. I thank you very much for your fair dealing toward me. But I must tell you how the gun shoots. After adjusting the sights I fired five successive shots at a rest, 125 yards, and put every shot in a bullseye 1 1/2 inches in center. Three of the shots would be covered by a five cent nickel piece. I killed a hawk 300 yards the second shot. I am confident I could kill a deer with it three-quarters of a mile away. The gun is well balanced, and the workmanship is superb. I shall recommend the gun whenever I can.

Truly yours, EDWARD HALSTED.

## Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of ordinary pure Rice paper, they have been inhaling the MOST DEADLY OF POISONS, thrown off by all burning paper, namely: The Oil of Creosote. CHARLES G. BERRY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco, invented and patented a process, March 5th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOUR and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper makes a safe proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the fact that "OLD JUDGE" Cigarettes they smoke. Sold by all leading dealers. Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water St., NEW YORK.

GUN POWDER!  
Dupont's Rifle, Sporting and  
Blasting Powder.THE MOST POPULAR POWDER IN USE!  
DUPONT'S GUNPOWDER MILLS, established in 1807, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:**Dupont's Diamond Grain.**—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 15 casks.**Dupont's Eagle Ducking.**—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 15 and 30 casks and 64 and 128 lb kegs.**Dupont's Choke Bore.**—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 64 lb kegs and 15 casks.**Dupont's Eagle Rifle.**—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 15 casks and 64 lb kegs.**Dupont's Rifle Fg.**—"Sea Shooting."—FFG, and FFfg. The Fg. for long-range rifle shooting, the Ffg. and FFfg. for general use, burning strong and moist. Packed in 15, 15 and 30 casks, 64, 128 and 256 kegs. 15 coarse, FFfg. fine.**Dupont's Sporting, Mining, Squirrel and Blasting Powders** of all sizes and descriptions. **Special Grades for Export.** Also Rifle Cartridge, Muzzle, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. Y.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

The Hazard Powder Co.,  
MANUFACTURERS OF  
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square casks of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. casks and 5 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. casks and 5 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG, and "Sea Shooting" Fg in kegs of 25, 50, and 100 lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. casks. Burns strong and moist. The FFG and Fg are favorite brands for ordinary sporting, and the "Sea Shooting" Fg is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

#### A PROPOSITION TO GENTLEMEN SPORTSMEN.

EAST ROCKAWAY, QUEENS COUNTY, L. I.

Editor Forest and Stream:

I noticed in last week's edition of your paper a communication with editorial comments on the trapping of game on Long Island. The idea of your correspondent and your comments are but in consonance with the overcroachments which are constantly being made upon the liberties of the people by the wealthier classes. The law forbidding the trapping of game on Long Island is, or ought to be, unconstitutional. The farmer, upon whose land the game is found, and upon whose crops it has lived, is virtually the owner of it, and if his children want to trap it there is no equitable objection to their doing so. By what right does that unmitigated nuisance—the "real sportsman" (?)—trespass upon our land, throw down our fences, wound our cattle and kill game which we have grown, which has fattened upon our crops? The law and the complaints of your correspondent have induced the farmers in this vicinity to club together and put up the required legal notice forbidding all trespassing, and if your correspondent or any other "real sportsman" (?) is caught shooting in this vicinity, he will have a bill of damages and costs to pay. We have determined that, if our boys cannot trap our own game, aristocratic (?) trespassers shall not shoot it, and we too unto any man who disregards our notice.

I. H. GRIFFITH.

THE letter which we have placed at the head of this column is certainly frank and outspoken. The writer does not mince matters. He claims to be a farmer and to represent the feelings of his fellow farmers of East Rockaway. We know that the views expressed are those held by other land owners on Long Island, in other parts of the State, and in other States of the Union.

It is most important in this discussion of the game laws which refer to the game on landed estates, that we should have a clear appreciation of how such laws are regarded by a class who are so directly interested—namely, the farmers. We believe that Mr. Griffith's letter fairly expresses the attitude of thousands of farmers toward the gunners who shoot over their lands. It therefore deserves fair and candid consideration. This we are prepared to give to it.

We do not propose to waste our time by attempting to prove to Mr. Griffith, and to those who share his opinions, that the game which he claims to be his belongs to the State, that the State has then the right to prescribe the conditions of its capture, and that the law against trapping therefore ought to be, and is, constitutional; nor shall we attempt to explain to him the exterminating effects of the practice of snaring game birds. All this being proven even to their own satisfaction would not, we opine, change the attitude toward sportsmen now maintained by many farmers, nor would the end sought, which is the due protection of game, for all our logic, be any nearer of attainment. Indeed, for the time being, we are willing to grant to the farmer all that he claims in this matter; accede to his proposition that the birds on his land belong to him; and even acknowledge that he may do with them as he pleases. For we shall try to show to him a wiser disposition than that of smuggling them with broken necks to the baggage-master and marketman.

It happened that this letter came to us only after that part of the present article, which follows this paragraph, was written for to-day's issue of FOREST AND STREAM. It is an admirable indorsement of what we had written. A further consideration of it must be deferred to a future number, when, in accordance with our previously determined plan, we shall address the farmers directly upon this subject. Our proposition now is to gentlemen sportsmen.

The provision against snaring and trapping game birds is eminently wise and proper, but outside of certain restricted territories which are leased and protected by game societies the law is practically a dead letter; so much so that the traffic in trapped birds is conducted without concealment, and game dealers in New York openly advertise for trapped birds and openly sell them.

The law is not respected by the farmers, who have it entirely within their power, if they will, to prevent the setting of snares and traps on their lands.

They do not regard the law because it is not to their interest to do so. Public opinion in farming communities does not sanction the law. Its enforcement is regarded by land owners as an infringement of their rights and of the rights of their children.

The only way by which this law can be made anything

more than a dead letter is by enlisting the interest of the farmer in securing protection for the birds. The policy to be pursued is that which has been repeatedly indicated in this journal. We cannot better outline it than by reproducing here what we have said before, and we accordingly repeat from the FOREST AND STREAM of March 11, 1880:—

"Omitting at present the discussion and even the mention of all other means, there is one precaution and protection, which of itself alone would suffice abundantly to enforce thoroughly all the game laws, and in fact go far beyond the scope of the laws—namely, such a uniform system and policy on the part of all sportsmen as will give all the landowners a warm and steady interest in raising and sheltering and defending all the broods of young birds on their farms. If all the farmers on the Island were one and warmly one in this matter the work would be done up thoroughly, for they are lords of the land.

"In very many instances, as matters now stand, farmers and gunners are not friends in these matters, and have no interest to befriend each other. Without going closely into particulars—which in fact is not necessary—the fact is that there are gunners who are brutes and wild beasts when their gunning fever is at the height, and who, like so many Malays running a-muck, will recklessly trample down crops in a ten-mile walk, damage and exasperate the farmers all the way; perhaps if accosted, and that in a proper way, insulting or damning the farmer; or, to the disgust or alarm of his wife and daughters, shooting into his doves, possibly while the doves are near the house or on the home lot or on the barn roof. Such gunners come out from the cities every year and are a disgrace, and worse yet, a great injury to all the real gentlemen who like now and then to handle a gun in the right way and time. One is an offender and the next ten are blamed and hated on account of this one.

"Let all the farmers and their sons and hired men find that it pays them to protect birds and they will do it and satisfy all parties. The gunners are willing to pay for their sport more than the pittance of ten cents a quail, which a sly and stingy baggage-master hands out secretly to the trapper. The dime is a bigger coin to the hard-handed farmers boy, scantied of spending money, than a quarter is to many a sportsman. Let all parties understand each other and the birds will be left undisturbed and will be carefully protected till the honorable gunners come for the sport at the appointed time and pay for the sport that is then and thus guaranteed them on good grounds, something as in the old country, but in the right way for American citizens. The practical details ought not to be at all difficult to arrange in most parts of the Island, nor in other sections of the country. But if some farmers are dogs in the manger—do not shoot nor let others shoot on their farms—all the better, for there will be safe harbors, secure game preserves, where the birds will come up to full strength, and from which they will take wing, to be shot elsewhere or to procreate another generation.

"If the gunner would always pay for the birds he shoots, and if he shoots only what can be properly used, the farmers of the Island and the State and the Union in a vast majority of cases would welcome such gentlemanly gunners and perhaps be proud to rank among them as warm friends of fair and lawful sport.

"These two points, upon which we cannot too strongly insist, are of vital interest to many thousands of men whose interests in the matter are really identical in the long run, if only regarded in the proper light. But if the farmers are expected to protect and support and favor quail and meadow larks in order to let mischievous or butchering gunners kill ninety-five out of every hundred, without thanks or pay, and perhaps with serious damage to crops, temper and comfort, the sport is rather too one-sided. Rather let mutual arrangements be made to equalize it and to harmonize it all round."

Only by adopting such a policy as we have outlined can gentleman sportsmen hope to preserve from extermination the game of Long Island and of other sections of the country. We commend to game societies and to individuals a consideration of this view of the case.

THE FOREST AND STREAM does not stop with a reiteration of the general recommendations here given. It is prepared to go further, and for the benefit of its readers attempt to put this into actual practice by arranging the details and

## FOREST AND STREAM.

NEW YORK, THURSDAY, NOVEMBER 25, 1880.

—This is an excellent time to call the attention of your friends to the merits of the FOREST AND STREAM. We shall be happy to supply specimen copies of the paper to any addresses which may be sent us for that purpose.

WE propose to press this week on Tuesday, instead of Wednesday as usual, and many communications which would otherwise have appeared in this number are necessarily deferred a week.

**PITHING FISH.**—While on a fishing excursion recently we brought in a string of black bass which looked so nice and fresh that all at the country hotel where we stopped thought they must all have been caught on the last day, for they knew we had been in camp three days. When told the fish were "pithed" as soon as caught they seemed no wiser than before, and so it occurred to us that many other readers of FOREST AND STREAM may not know the word. Take down your "unbridled" and you will find that pithing is the act of severing the spinal marrow, usually next the head, and it probably is so called because it cuts the pith, or marrow.

The operation renders a fish, or any other animal, senseless immediately, bleeds them somewhat and keeps them from bruising themselves while dying in the ordinary manner by asphyxia, or drowning in the air, whereby the gills become dry and the blood clots. All fish should be either bled in the gills or pithed as soon as caught; they look better, keep better and do not suffer.

**BACK FROM THE SOUTH.**—Mr. S. T. Hammond, whose departure for the South we announced in our issue of October 23, has returned with all his dogs except Thistle. She whelped about ten days since and was left for the present in Virginia. Mr. Hammond has been in Virginia and Maryland and reports his dogs fairly plenty. He is well pleased with the way in which all the dogs acquitted themselves, although the time that he has had them is but short to fit them for the trials. We shall expect to see them at Robins' Island next week.

bringing into direct communication with each other, the gentleman sportsman who is willing to make a suitable return for services rendered, and the farmer who is willing in consideration of fair treatment to preserve the birds on his land.

We propose the fair trial of a carefully matured scheme, of which the general purposes are:

1. The protection of game birds by farmer and landowner for the benefit of the gentleman sportsman.
2. A fair remuneration of the farmer by the sportsman for privileges granted.
3. Putting the two interested parties into direct communication with each other.
4. A discrimination between gentlemen and rowdies, and the protection of the farmer and the gentleman sportsman alike from the direct and indirect injury of lawless gunners.
5. The uncompromising enforcement of the law against netting and snaring—not in the interest of the sportsman as against that of the farmer; but for the mutual benefit of both.
6. The united efforts of farmers and sportsmen to duly protect and replenish the supply of game.

To put into tangible shape such a scheme as this, we must at the outset receive the endorsement and co-operation of the sportsmen who are interested. If we have not mistaken, we shall receive this; and without further preliminaries, we now call upon each of our readers as approve of the plan, and are willing to join us in it, to send their names and addresses to this office. We invite correspondence on the subject.

#### THE DEATH TRAP IN SHINNECOCK BAY.

SINCE the publication of our article with the above heading, which was taken up and commented upon by the *New York Times* and *Brooklyn Eagle*, we have had several letters and interviews upon the subject. A lawyer writes us that he finds that no law appointing commissioners to locate an inlet for the bay was passed by the last Legislature, and thinks that this may be an error.

We have not looked into this portion of the affair, having received our information from the fishermen about Quogue, Atlanticville, and Good Ground. The facts about the closing of the inlet and the certainty of the death of the fish, if not released, all agree upon. During the past week many young bluefish (snapping mackerel) have come to New York market from the bay, fish of half a pound; and if they serve for food it is better than to have them entirely lost. The bluefish left this part of the coast (Long Island) fully three weeks ago; and the millions of young of this species, as well as those of the menhaden, weakfish, etc., should be allowed to go and return with increased growth next season to say nothing of the injury of the bay for spawning purposes by allowing the fish to die there.

Mr. H. D. Butler, well known as the Superintendent of the New York Aquarium under the old regime, has been at Good Ground all summer. He tells us that the location of an inlet has been decided upon, but that it will not be dug until the people have finished their fall farming work, perhaps in January! This is surely covering the well after the calf is drowned. The bluefish, weakfish and menhaden will then have died, and their carcasses, such as are not devoured by the crabs and eels, will lie until the warmth of spring causes them to decay, when the scum on the top of the foul water will repel every fish seeking to enter to deposit its eggs. The closing of the inlet has resulted in a rise of the waters of the bay from the inflowing creeks until it is between one and two feet higher than usual, and the cellars in the vicinity are flooded. The only outlet is the filter through the sands of the beach. Mr. Butler stood upon a temporary foot-bridge, made necessary by the rise of the waters, and counted thirty-five dead bluefish in the little creek. They had chilled and died.

The fishermen say that in former years while the bay was closed they got carloads of large striped bass which, becoming chilled, floated up to the surface. Weakfish of eight to ten pounds are readily caught by dipping up in a net, they being too cold to escape. These fish cannot stand the cold weather that some of our fish which remain all winter with us do. The different fishes are similar to the birds—some are hardy and will endure cold and others will not. While men are disputing over the location of an inlet, it is well to bear in mind these facts as gained from those long familiar with the bay. Seventy years ago the inlet was away east of where the lighthouse now stands. The one opened last season was two and-a-half miles west of it. All the inlets on the south side of Long Island are working west. The great inlet at Fire Island does not cross the beach at a right angle, but runs from the bay in a westerly direction, and perhaps this might prove of advantage to Shinnecock.

This is a question which does not alone concern the men who live around and from the bay. It has a wider application. It affects the food supply of a great city, and while our Fish Commissioners are giving their time and energies to the stocking of the waters, and the people are willing to furnish the means to do it with, here are untold numbers of fish dying just as they have arrived at the age when they are fit to go to sea to grow. We would like to see our State Fish Commissioners empowered to meet cases like this; they are the ones who should have entire charge of it, and they would arrange the inlet where it would promise the greatest

permanency without regard to any man's front door. They should have a distinct appropriation to meet such a great emergency as this, and we know they would not wait until January to do it.

### Forest and Stream Bird Notes.

AN INDEX AND SUMMARY OF ALL THE

ORNITHOLOGICAL MATTER IN FOREST AND STREAM.  
VOLS. I—XII.

COMPILED BY H. B. BAILEY.

THIS volume, as its title imports, is a complete and comprehensive summary of all the ornithological matter contained in the first twelve volumes of the *FOREST AND STREAM*. The material here condensed comprises extended essays and descriptions, field notes and observations by sportsmen and naturalists. They include every part of North America; embrace a period of six years; and relate to the life history, haunts and habits of all the familiar birds of our seashores, fields and forests.

Much of this material has been written by well-known ornithologists, who have from the inception of the *FOREST AND STREAM* recognized its value as a medium for the interchange of information of this character. In addition to having secured the contributions of so many writers of accredited authority, the paper has been remarkably successful in stimulating original study and observation on the part of its readers, and the good result has been the acquisition of a vast fund of new and useful information pertaining especially to the game birds of North America. The great bulk of the book indeed has been furnished by sportsmen; it embodies their own personal observation, and is what has interested them. It is, therefore, what cannot fail to interest all sportsmen.

The labor of compilation, which has occupied the leisure time of several months, was undertaken at the earnest and repeated solicitation of numerous readers of the paper, who were cognizant of the wealth of ornithological material stored away in its files, and who felt the need of having the same in compact and accessible shape. The book as completed fully justifies their opinion; it contains more useful information about the game birds of this country than can be found in any other single volume published.

The plan followed in the preparation of the *FOREST AND STREAM BIRD NOTES* has been to make (1st) an alphabetical index, all the articles relating to a given subject being designated, with references to volume, number and page; (2d) an abstract of each article, and so a complete abstract of all the matter contained in the twelve volumes relating to each separate subject; and (3d) a complete list of the writers.

The book will be of equal value to those who do, and to those who do not, possess complete files of the paper. Under each head, as Quail, Stuffed Grouse, Snipe, Wild Turkey, Woodcock, etc., will be found a digest of all the contributions concerning each of these birds, the localities where they are found and the seasons, the migrations of the migratory species, and their breeding and other habits.

The book is now in the printer's hands. It will be printed on fine calendered paper, with wide margins, and will make a volume of about 200 closely printed pages. The date of publication and the price will be announced in due time.

#### DEFIANCE OF LAW IN NEW YORK.

THE law of the State of New York prohibiting the sale of striped bass (rock-fish) under half a pound in weight has been generally observed by the market dealers of this city, until recently. The fact is that striped bass weighing less than one-half pound are now sold in the New York markets six days out of the seven of every week. It was supposed by the dealers that those who were instrumental in procuring the passage of the law would be on the lookout for its violation and enforcement. This is not the case, nor is it to be expected. Men may advocate the passage of a law and there their duty ends. Neither is it our duty to make complaints to the courts, as we consider that we fulfill it when we publicly call attention to a violation of the law.

The fact is that New York City needs a Game Protector, and Long Island needs another—men who reside on the premises and can watch the markets. These markets, as we have before said, are the great incentive to poachers, and if the sale of their plunder is stopped they cannot follow their unlawful business.

There is entirely too lax a state of public opinion in regard to the violation of the game laws, many people looking at them as a venial offence; but it is robbery; robbery of the whole people, which, if practiced upon an individual, would be dealt with severely. These laws are made, or should be made, to give every man a fair start in the race for sport, and he who starts in a few days, or weeks, in advance is a robber, whom it is base flattery to call simply a violator of the law.

The striped bass law was enacted to save a valuable fish from extermination by the killing off the young—and surely half a pound is small enough limit for a fish which often is seen in the market of thirty pounds, and sometimes of double that weight.

The poachers are now in arms to resist the law. Our authority for this is the *Oswego Palladium*, which says:

Two weeks ago William P. Dodge, of Prospect, a State game con-

stable appointed under the act of last winter, made a tour of Oneida Lake and de-troyed about thirty trap nets which he found set in violation of the gamelaw. He used some boats from Messenger's hotel livery. That night, it is reported, the fishermen, learning of their losses, gathered at the hotel, armed themselves with axes and destroyed all the boats, to the value of about \$400. They have reset their nets, and every night from ten to fifteen fishermen, armed with guns, patrol the beach all along the fishing grounds. They keep a man stationed at Canastota to send out the alarm if any State constable or any other officer starts out for the lake. The fishermen openly declare that they will kill the next game officer who appears. They are lawless in their habits, and it is not doubted that they will follow their threats. One man has thirty of these trap nets, worth \$40 apiece. If the enforcement of the law is insisted on, it is believed that there will be trouble, and at the same time it looks cowardly for the Oneida County Game Association, which started the movement, to back out.

If what this report says is true, then no language is too strong to use in this matter. We hope to learn that the Oneida Game Association has not backed down, but that they will support Mr. Dodge in his laudible undertaking. If not, then we trust that Mr. Dodge has the requisite backbone to call on the State for aid. We have great hopes of the efficiency of the new Game Protectors. The only fault is that there are not enough of them to watch the great markets and Long Island, the home of the poacher, and we will give them our unqualified support in all their lawful undertakings.

There is no use in mincing matters when poachers are as daring and defiant as these Oneida Lake robbers are. They must be put down at all hazards.

Since the above was penned the *Rochester Democrat and Chronicle* came to hand with an account of an attempted assassination of Mr. G. M. Schwartz, the Game Protector of that city. After recounting a splendid raid by Mr. Schwartz on the illegal netters of Cayuga and Seneca Lakes, whereby over 100 gill nets and many fine lake trout were confiscated, it says:

As they reached Two Mile Point several men were seen in boats laying their nets, but upon the approach of the steamer they pulled hastily to the shore and ran away. Their nets—five in number, each loaded down with magnificent salmon trout—were confiscated by the officials, and the steamer resumed its course. It was a bright moonlight night, and Mr. Schwartz and Mr. White were standing on the deck engaged in conversation, when the report of a gun was heard on the shore, and a bullet entered the post against which Mr. Schwartz was leaning, within two inches of his head.

The lead knocked off a splinter of wood, which struck the gentleman over the eye, but beyond this he was not injured, although the call was exceedingly close. For the remainder of the trip Mr. Schwartz stood guard with a gun in his hands, while Mr. White pulled out the nets, and before they reached Hammondport they had seized twelve nets and torn up between thirty and forty.

Mr. Saunders, superintendent of the Cayuga steamboat line, offers a reward for the discovery of the man who fired the shot and every effort is being made for his apprehension. It was certainly a dastardly attempt at murder, and shows plainly the character of the men who are engaged in illegal fishing and the means to which they will resort to resist the officers of the law. Mr. Schwartz has done and is doing splendid work in protecting our fishing interests, and he should receive a substantial support.

#### FISH EGGS FOR FREE DISTRIBUTION.

PROFESSOR BAIRD, United States Commissioner of Fish and Fisheries, will have eggs of salmon, land-locked salmon, whitefish and California trout for public distribution during the months of December and January.

The salmon eggs are those of the Atlantic salmon (*Salmo salar*), from the Penobscot River, and will be sent from Bucksport, Me. The land-locked salmon eggs (*S. Sebago*) will be delivered at Grand Lake Stream, Me., the eggs of the whitefish (*Oreogonus albus*) at Northville, Mich., and the trout from the United States salmon-breeding ranch on the McCloud River, California.

Now is time for all fish commissioners or fish culturists to make application for the eggs of such species as they may require to Prof. Baird, Washington, D. C. There will be no charge for the eggs, nor for their packing, the only cost to the receiver being the express charges on the packages from their point of shipment.

DR. GARLICK ON THE CARP.—The venerable fish culturist, Dr. Theodatus Garlick, now in his seventy-sixth year, has begun the culture of the carp. The Doctor, as some of our latest readers may not know, is the father of fish culture in America and is an invalid of sixteen years' standing, now confined to his house. He writes to us as follows from Bedford, O., Nov. 13: "I received a very nice line from Prof. Baird a few days ago. He also sent me some German carp and I have placed them in as good a place as can be found most anywhere. Prof. Baird is doing more good for our big human family than any other man living."

STATE ASSOCIATION PRIZES.—Last week we published the names of the prize committee. We are informed that many prizes of a most substantial character have been already promised and that the full list, when completed, promises to be exceptionally full and valuable.

A WORD TO OUR READERS.—Every reader of the *FOREST AND STREAM* is requested to send us the names and addresses of such of his friends as are interested in field sports, but are not among our subscribers.

# The Sportsman Tourist.

CHILCAT AND CHILCOOT.

STEAMER FAVORITE, PORTAGE BAY,  
CHILCOOT ISLET, Chatham Straits, Alaska,  
August 24, 1890.

I DON'T feel at all sure that the above long and apparently comprehensive heading will give you or your readers a very clear idea as to "Piseco's" whereabouts; so I will explain a little more in detail where I am, and for the benefit of such of your readers with adventurous turn of mind, fondness for travel, and who may be bothered every summer with the great question "Where shall I go?" will tell you how and why I got here and what I am doing—the latter first, as it is the shortest story. I am simply waiting, with such patience as I can muster up, the getting sober process—now I hope in operation upon a number of Indian chiefs with whom to-morrow I am to hold converse on affairs of importance; of so great importance, in fact, that there are at this present moment, within thirty miles of this place, at least three thousand Indians, who are more or less advanced in the different stages of intoxication which are incidental to a *gotlach*, which *gotlach* is the commencement ceremony of a war which has been declared between the Chilcat and Chilcoot Indians.

A self-constituted commission, consisting of Major Wm. Gouverneur Morris and myself, which is irreverently termed by the Shaman and hydrographer who accompany it the "Hyas Joint," has been cruising around among the islands of the Alexander Archipelago, the icebergs of Cross Sound and Icy Straits, the "glorious" glaciers (I got that adjective from Prof. Muir himself) of Chatham Straits and Lynn Canal, and the dangerous rapids and reefs which characterize Peril Straits, visiting the most powerful of the Oranase or coast tribes, and settling up many troubles and little disputes which have sprung up since the white men have begun to penetrate the country.

Our trip is being made in a trim and very comfortable little steamer, the Favorite, which is owned by a company of enterprising men, who have determined, Elliott to the contrary notwithstanding, that the resources of Alaska are well worth developing, and who, having organized themselves as the "Northwest Trading Company," are following as far as they go, and reaching out beyond, when they fall short, the footsteps of the Hudson's Bay Company, which for years controlled the trade of southeast Alaska.

The company has established and is establishing trading posts at various suitable locations, where, comfortably ensconced in a neat frame house and store combined, their agent employs his time in trading with the Indians his stock of cloths, buttons, shoes, hats, beads, blankets, combs, in short nearly all and every article down to bogus meerschaums and cheap umbrellas usually to be found in a country store, receiving in return the skins of sea otter, fur and hair seals, sea lions, beaver, mink, marten, land otter, bears, wolverines, lynx and others, and the oil of walrus, porpoises, and seals and between intervals of active trade begins his leisurely work of hours by learning Chinook from a Clootchman.

The Favorite is the connecting link between their agents and the outside world (in which dignified position Sitka stands to them), and, making a monthly trip, distributes and collects.

Upon this trip the interests of trade were sacrificed, and the coach-whip which floated from her main gave indications—which were confirmed when the howitzer gave forth its peal and the galling, mounted on the upper deck, came into view—that the "fire canoe" was upon a more important mission; and at each village we visited there was a hurried discarding of blankets and scrubbing up and arrangement in gorgeous, although often incongruous costumes, by the Liwasi Tyhees, preparatory to their *war-ann* with the "Hyas Cloche J. C."

Yesterday we reached this place, and here only the post traders greeted us, and a few women remained to welcome and sell us salmon berries. All the men and boys had gone to the great *gotlach*, which was going on at the Chilcoot village, some twenty miles away, and at Chilcat also (do be careful of the last syllables of *Chilcat* and *Chilcoot*, otherwise my letter will be badly mixed) a potlatch was taking place, which was enlivened by a little fighting, in which already some blood had been shed, one life lost, and much more of the same to be expected.

I'll try to give you a clearer (I won't say clear) idea of the situation. The Chilcats and Coos occupy each large village. The Chilcats are the most powerful and warlike of all the Alaska Indians, and have always been opposed to the coming amongst them of white men, principally because they feared an interference with a right which they have always claimed and maintained to the trade with the interior Indians, the Sticks, and also because, as their chief, Klotz-Klotz, said, "The white men demoralize the Indians by selling or giving them liquor and debauching the women," which, I regret to say, is only too true.

Nearly all the tribes of Alaska are, according to tradition, descended from the Chilcats, and among these descendants are the Chilcoots, who, living in proximity, have intermarried to such extent that a war between them has all the horrors of a civil war. Such a war we found in progress, started a few days ago, as are nearly all the troubles in this country started, by a barrel of molasses, which had produced its usual effect upon an Indian who, last summer, had been stabbed at Wrangell by a white rowdy, and who, as a natural consequence, cherished a blood feud to be averted only by the "getting even" process of killing a white man. This ceremony is attempted to perform on a French trader (from whom in all probability the molasses was procured), but got whipped in the attempt, as the trader was protected by the chiefs, who thus kept their promises to me, and satisfied himself by settling up a grudge with another Indian, who some time ago had, in a heated discussion, bitten off his right ear. This little affair he settled by shooting to death the cannibalistic Indian. Unfortunately the man with the broken ear

a Chilcat and the ear-breaking defunct a Chilcoot, hence this row, which blood or blankets alone can settle, and both parties are getting up Dutch courage for the fight.

Our only hope is that the messages we sent to both sides on our arrival yesterday will meet with respect, and that they will, as we request, establish a truce, get sober and come to talk the matter over with us. If they do I have full faith that we will be able to stop the war, but until they do come, or send us word that they refuse, we are reduced to the monotony of expectancy, which is the more trying inasmuch as within easy distance there is a grand glacier, whose terminal moraine is accessible, that we would like to visit, a marsh and flat where wild geese and ducks congregate, and a stream where *Salmo spectabilis* are abundant, all of which are to us now out of reach, for it would never do to let these Tyhees, if they do come, catch us in the dishabille incident to glacier exploring, shooting or fishing trips. We are now able to sacrifice prestige, while gaining comfort, by the substitution of slouch hats, flannel shirts and rubber boots for brass buttons, cocked hats and gold lace.

The Major and I have, however, our resources—he up to his elbow in papers which are in course of embodiment in his forthcoming report, and I my note-book, which is crowded with items, among which those for Piseco's Forest and Stream friends are badly mixed with others of dry statistics and other matter better adapted for official papers.

I will while waiting employ profitably a portion of the weary hours in getting into shape some of the former, which in due time I will transmit to you as "The Log of the Favorite." I trust that in so doing I may be able to interest first of all myself, for it is hard for me now to withdraw my mind from the contemplation of the alternative which is facing me. If my message to the Chilcat and Chilcoot chiefs is received with respect, and I find that I have not overrated my influence with the Indians, and if they do get sober, do declare a truce and do come to me as I request, and when the common sense submit to my counsel and do re-establish peace, I shall have rendered a great service to them and to such whites as are now prospecting the country far beyond protection, and the results of this trip will be of more value to the future of Alaska than any which I have been enabled to accomplish.

But, on the other hand, if I have overrated and they won't come, and send me instead a message to clear out; or, if coming, they refuse my intervention, the prestige I have established will be ruined and my usefulness in this country at an end.

I have a great deal depending upon the next few hours. When they are passed and I shall know the result I shall either finish this letter or commit it to the wastepaper basket.

PYRAMID HARBOR, Aug. 25, P. M.

That you get this letter may be a sign and token to you that success has crowned our efforts. I gave in yesterday afternoon, too restless to continue my stumping up, and in spite of my prudent resolution, my shooting habits and started across the trail for a peep at a little lake where the evening before the Major had seen signs that convinced him that when the time was right ducks must flock to it.

About half way over I met in single file, first Pierre Errassan, who, with his handsome six feet of figure arrayed in a red shirt legs and well-revealed, was now leaving the capital road and in Fra Diavolo, and behind him five Indians, the foremost of whom I at once recognized by descriptions I had had as Klotz-Klotz, the chief of the Chilcats, a tall, well-built, dignified old fellow, from whose good looks, however, a wad of cotton, stuffed into a hole in his left cheek, somewhat detracted. From this hole, caused by a gunshot wound, one of his *soubriquets*, "Hole-in-the-Cheek," has been derived. With him was another veteran, almost equally powerful with himself and much older, Klotz being about sixty and Kak ne tiny about seventy or more. Both welcomed me most heartily, for in spite of my decidedly unimilitary rig, Errassan, with true shrewdness and French politeness combined, drew himself stiffly up as we neared each other, and making to me the most profound obeisance omitted to offer me his hand, thus paying tribute to my greatness, which was his trump card with the Indians, and most gracefully and solemnly introduced me.

The costume of Klotz and Kak were not so gorgeous as to add to my discomfort, as both they and their attendants were arrayed in blankets and leggings; but in a big box carried by the latter was the wardrobe, in which he had expected to astonish and impress me.

The retainers were in war paint, with cotton or down on their heads, which indicated determination.

Thus stripped of all external show of power, the old chief and I sat down under a great cedar tree and discussed the situation. I think that this meeting was a fortunate one, for I had with me a canoe and a breech-loader, the free use of both of which I at once accorded; and the influence of a large meerschaum pipe, which some months ago I sent him as a present, had its weight.

After all, if the true history of wars and diplomacy could be written, how many times such little matters have had more weight than elaborate speeches, convincing only their utterer.

Free from disturbing influences, Klotz-Klotz unbosomed himself, and during that interview he admitted to me that his family was in the wrong, and that he would willingly assist in establishing peace. He claimed that the killed Chilcoot was not worth a hundred blankets, but that he would pay two hundred if no less would heal the breach.

The post trader made Klotz & Co. comfortable for the night, and this morning about ten o'clock several large canoes, with flags flying, drums (Indian drums) beating, and propelled by about a dozen paddled paddlers, each came around the point of Chilcoot Islet and were about to land on the west side. In the foremost was Danavah, the Chief of the lower village, and a blind old Shaman, who is Chief of the Chilcoots.

They were directed to go ashore to the post trader's, to wait until the firing of a gun announced the readiness of the Tyhees to receive them. They refused to go to the trader's, because the Chilcats, their enemies, were there, but instead paddled in to the mouth of a creek, where on the beach they prepared and ate their meal and donned their pow-wow garments. At 11 the sharp bark of the howitzer summoned them to the meeting, and both parties came alongside on different sides of the boat, and avoiding all intercourse with each other.

When duly seated in the cabin they presented a not undignified appearance. All wore good American clothes, of which the coats were ornamented with more or less insignia of various ranks of American and English officers of both army and navy, white shirts and shoes and stockings.

On our side of the table, epaulets and full dress undoubtedly produced good effect.

The interview lasted two hours, and during it the whole difficulty was adjusted, and when we left the stifling atmosphere of the cabin—for Indians even of high rank are odorous—for the upper deck we were a party of friends all under pledges for mutual benefit.

None to them was, in answer to the request of both parties, "Yes; I will do my utmost to assist you in this matter," which matter was this. "When you go to your country please tell them to send teachers to us as well as to the Sticks, so that our children may not grow up stupid like their fathers." (The Sticks are the Indians at Wrangell, where the Presbyterians have established a mission school which is doing much good.) I believe that they will keep their promises to treat well all white men who come to their country, and I know I will mine, and through you I now ask of any Christians you may have among your readers—and I doubt not that such there are—to send to the Rev. G. Lyon, Missionary at Sitka, such articles as will be useful to the school which Mrs. Dickson, the wife of the post trader, has started on her own hook, and at which half a hundred children are being taught, and which is soon to be transferred to a neat frame building, which, designed for a store at Taku, has been, by Capt. Vanderbilt, given to the Indians at Portage Bay, and on each side of which build the Chilcats and Chilcoots, now re-united, promise to build villages so that their children may attend the schools.

The Indians were entertained by a few shots fired from the howitzer, and more by several volleys from the galling which was mounted at, and which was made to sweep an arc of 180 deg., at good canoe distance.

Then they paddled ashore in company, lit a camp fire, and began a friendly potlatch on the beach, and we, satisfied with the day's work, started at 3 P. M. for home, as we have learned to consider Sitka and the now anchored in a snug harbor for the night, during which I hope to make up in sleep for last night of wakefulness and unrest.

All's well that ends well.

PISCEO.

## ROUGH NOTES FROM THE WOODS.

FIFTH PAPER.

OUTLET OF FOURTH LAKE, BROWN'S TRACT—AND JONES' CAMP ON THE STILLWATER—GOING IN AND COMING OUT—SOME REMARKS ON THE PRESENT STATUS OF THE NORTHERN WILDERNESS—THE "ANGLO HORSE" THE "KILLER" TOMMYKAT—WHAT HE CATCHES—WHAT HE KILLS, AND HOW HE DOES IT.

IT is the 2d of September, as sitting in my shanty at the foot of Fourth Lake, lazily scribble a few notes on a two-moose's paddle in these Northern waters. I have perhaps paddled too much. My unquenchable love for fresh water seas—large or small—has kept me from prospecting the forest as much as in all honesty I ought to have done.

But the Woodcock was such a duck; it was so delightful to drift about the cool, clear lakes, by day or night in her. The weather during the heated term was so perfect, and the woods from side to side, and from end to end, are so fearfully heavy to a footman that I came to spend most of my waking hours ashore. More times than I can tell I flitted here with the coarse, soft brakes, (ferns botanically) piling them up more than at each end of the canoe than in the middle, then lying down in the easiest position I could get, let myself drift—just where it pleased winds and waves to send me.

The easy, gentle rocking of the canoe was the best incentive to drowsiness I ever found, and by night or day, was nearly certain to send me into dreamland. A score of times I have gone to sleep drifting on deep, deep water, to be awakened on the morning of the next day by the bright green craft among the dead balsams and spruces that—Satanus confound them—make half the shore-lines of all the lakes in the North Woods a nuisance instead of a delight. Government does it. Authority decrees that because a certain ditch on which boats may be floated, taxed, loaded and, let us hope, ultimately sent to the demeriton bow-woos—requires more water, the most beautiful and useful water system in the world shall be laid under contribution for the needful liquid to float a bullock wagon. The bright green craft are to be converted into a dismal nightmare of "drowned lands." The outlet of First Lake has a most powerful and commanding dam which has lowered the first three lakes 41 inches since July 12. A dam is being built at the foot of Sixth, where there is 60 feet fall or thereabouts.

A coffer dam is in progress between Seventh and Eighth, the Woodhulls, the Beaver, the Grass, the Oswegatchie. All the waters in the western and northern portions of the wilderness are "essentially" dammed up. The bright green craft that has caused this time will wait. For the present I am tempted to quote from "As You Like It," "Touchstone," "It thou be'st not damned, for this the devil will have no shepherds." I cannot see how else thou should'st escape."

I cannot dwell on this dreary feature that every intelligent tourist sees and execrates. If Verplanck Colvin's proposition of a grand aqueduct from the head waters of the Hudson to New York City (supplying the Hudson Valley) should ever become an accomplished fact, it will change the entire character and status of the Wilderness in a manner that guides and landlords have yet to learn.

Never in the history of the Wilderness was such an influx of visitors seen as in the summer of 1890. One naturally asks, is this to continue? When "Murray's Fools" rushed to the North Woods in 1869, it was thought by many, even the guides, that the thing was overdone.

In 1870 guiding was poor business. It has picked up wonderfully since then, but to my friends the guides of the North Woods, I want to give a few words of advice. I have made it a point to get my information from the men most able to give it, and these are the guides.

My good fellows, don't run yourselves into the ground. You know, and I know, that when the guiding season is over, instead of \$3 per day you are ready to "hire out" for the winter at a wage of \$1 per day and board, and few of you can get that much.

Men: when you skin a gentleman he pays the swindle and makes a note of it.

For weeks I fished, paddled and hunted about the headwaters of the Moose. My soul was sated with trout and venison. I longed not for the flesh-pots of Egypt, but for the vegetable gardens at home, green peas, so to speak; succotash, as it were; the early harvest apple; the sweet hough; the summer sweeting; the fresh tomato; the dozens of things unobtainable in the woods. All this I said to myself, as at midnight I sat at the foot of Fourth Lake and reflected on the interviews guides and tourists, who row over these waters at all times of day and night. It was the fourth of September. In a week more my holiday was out. Why should I

Deer are very plenty all over that part of the Adirondacks. I hunted them with dogs, with several others, a week ago last Saturday, and we got three deer among us that day. The dogs were put out across the river directly opposite the Blue Mountain House. The next day, Sunday, one of our party who went down to Spring Cave, three miles below, heard some dogs barking in the woods across the river and went out to see what they were at. He found them around a large buck, who was fighting them. Having his rifle along he sent a ball through him and ended the fight. It was the largest and handsomest deer I ever saw, and would weigh 200 lbs. or over. He had eleven prongs on his horns, five on one and six on the other, and a fine blue coat of hair. It was supposed that the dog, which was a strange one, had driven him over from the East Branch, some ten miles away, and one of our dogs, coming to his help, had headed him off, and he being tired slowed fight.

A party of six Philadelphia gentlemen, with guides and dogs, came on to the level the last week of August, and hunted five dogs and killed five deer, one each day they hunted. Three of them were shot within eighty rods of my camp, near Indian Rock. Two of them were large bucks, and the head and horns of one they sent home to be mounted.

There is a tract of country between Middle and West Branch of the St. Regis, and running south to the Great Windfall, some twenty-five miles long by twelve to fifteen wide or more, which is now about the only part of the Adirondacks where the steamboat and Concord coaches have not reached or the whistle of the locomotive been heard. This is an unbroken wilderness, with not a dwelling-house on it south of Blue Mountain, and within it are many ponds and streams which are as full of trout as they were fifty years ago, and several that don't know a hook cast into their waters from one year to another.

One large stream, some three or four miles west of Blue Mountain, has only been visited by three persons this summer and never in the fishing season by more than half a dozen different ones. There is no signs of a path or road to it. One of the party told me he found everything just as nature made it there—not a stick out or any sign of a human being there. He told that in the deep holes where the stream ran through a beaver meadow that the water was alive with trout, and that he had three times in a leader, and often had a trout on each at one time. He said they were all nearly large brook trout, and some he caught would weigh a pound. There are many other streams within that tract of country of the same kind. One large stream formed by the outlets of Long and Wolf ponds, has a rough road into it from Blue Mountain, and there is a very good log shanty at Wolf Pond, which is only a short distance from the river. This stream takes its rise from Long Pond, and then Wolf Pond outlet comes in, in which makes quite a river. It empties into the west branch of the St. Regis some ten to twelve miles west of Wolf Pond. It is mostly after taking in Wolf Pond outlet still water, with occasional rapids, down which a boat can run by drawing over the rapids. It runs through a heavy timbered country until near its mouth, where there is a beaver meadow and a rough shanty, where settlers below come to cut the wild grass for fodder. I went over this stream, or part of it, and found the trout-fishing all one could wish for, and many of large size. They will run from one-quarter to two pounds in weight, many of them. Very few visit this stream at any time, owing to the difficulty of getting provisions and camping outfit, etc., into it. It is eight miles from Blue Mountain House to where the trail strikes it at Wolf Pond. A horse with a sled is the best way to get one's traps in, and by walking yourself or going on horseback one could go in very well. I went in that way and had no difficulty in getting along. Mr. Phelps, of the Blue Mountain House, has horses and a suitable sled, wagons, etc., also tents and camping outfit.

There are many other streams similar to those I have described. All this region is but very little frequented—no doubt less than any other portion of the Adirondacks that is anywhere near as extensive. Game of all kinds is found anywhere in this part of the State, and can I believe, by what I have seen myself and learned from others, be found there more plenty than in any other locality, and nothing preventing, more than I know of now. I shall with a friend pitch my camp next season in its centre. Partridge or ruffed grouse are plenty everywhere there, wherever there is a acre of woods, which will be a large share of it. Around Blue Mountain, go in any direction you may, you are sure to scare up a flock of them.

ADRIAN OXBACK.

### OUR WATERFOWL.

#### III.

**ANSER ALBIFRONS GAMBELI.** White-fronted Goose; Prairie Crane; Speckle-belly. Bill, red; feet, orange, with white claws; general color, grayish brown, darkest above, paler below, especially on forebreast; all the feathers with paler edges; forehead, line at sides of bill and chin, upper and lower tail coverts, white; many black feathers on lower breast and belly; length, about 27 inches.

The white-fronted goose is not especially abundant on the Atlantic coast, and seldom comes under the observation of our Eastern gunners. They are not often seen exposed for sale in our markets, and those which are seen there come, for the most part, from the West. In the Western States they are much more abundant, and are found in considerable numbers during their migrations in the Mississippi Valley. They are, however, by far the most abundant on the Pacific Coast, where they pass the winter, and afford great sport to the gunners of California, Oregon and Washington Territory. A favorite method of hunting them on the coast, as described by Dr. Coues, is by means of a stalking ox. He says: "A bullock is taught to feed quietly along toward a flock, the gunner meanwhile keeping himself screened from the bird's view by the body of the animal until within range. Though I have not myself witnessed this mode of hunting, I should judge the gunners killed a great many geese, since they talk of its 'raining geese' after a double discharge of the tremendous guns they are in the habit of using."

This species is said by Dr. Richardson to breed north of the sixty-seventh parallel in the wooded districts, and from there to the Arctic Ocean. Mr. Dall found it breeding in great abundance on the Yukon River.

The American bird is regarded by ornithologists as a variety of the white-fronted goose of Europe, which, however, it so closely resembles that it could not be distinguished from it by the unpracticed eye. A slightly longer bill in the American form is the only definite character assigned as distinctive.

**ANSER HYPERBOREUS.** Snow Goose; White Brant. Bill and feet pink, the toothed border of the former very prominent; color, white, except the primaries of the wing, which are tipped with black; the head and neck often washed with rust color; young said to be "dull bluish or pale lead colored on the head or upper parts of the body;" length, about 30 inches.

Variety *albatrus* differs only in being somewhat smaller, measuring about 25 inches in length.

The snow goose, during its migrations, is generally distributed throughout the United States, though less abundant on the Atlantic coast than farther westward. Like the preceding species it is most abundant on the Pacific coast, but we have found it in considerable numbers in the Rocky Mountains and on the plains. Many are killed in the Mississippi Valley, and a few are sometimes taken on the Lakes. It is a most excellent table bird, far more delicate and juicy than the Canada goose.

The distribution of the lesser snow goose, var. *albatrus*, appears to be much the same with that of the snow goose proper, but it is perhaps less frequently taken on the Atlantic coast than *A. hyperboreus*. We have in our possession a specimen taken some years ago on Long Island. When killed it was in company with a flock of the common brant (*Branta bernicla*), and excited much interest among the local gunners, who were disposed to regard it as an albino brant.

**ANSER ROSSII.** Ross' Goose; Horned Wary. "Bill studded at the base with numerous elevated papillae;" exactly like the snow goose in color, but much smaller; less than two feet in length, and weighing little more than a mallard duck.

Very little is known about the habits of this little goose. It is the most boreal in its habits of any of our species, and only enters the United States in small numbers during the winter. It has been taken at San Francisco, and it may enter the Missouri River country, but to the sportsmen of this country it is an unknown bird. Accounts have occasionally appeared in *FOREST AND STREAM*, from some of our correspondents near Winnipeg, of the shooting of waxies on the little lakes which dot that region. It is said that these birds are quite abundant in that section during the autumn, and that they afford good sport.

**ANSER CERULEUS.** Blue Goose; Bald Brant. Head, neck, upper tail coverts and most of the under parts, white; upper plumage, generally ashy or slaty gray, varied with brown; size of the snow goose, which it closely resembles in form.

The blue goose, which was for a long time regarded as the young of the snow goose, is now considered a perfectly good species. It has much the same distribution as *A. hyperboreus*, and, like it, is perhaps most abundant on the Pacific coast. It is not uncommon, however, in the Western States, and we have seen numerous flocks of this species in the Rocky Mountains.

**PHILIDE CANADICA.** Painted Goose; Emperor. "Wavy; bluish gray, with lavender or lilac tinting, and sharp, black crescentic marks; head, nape and tail, white, former often washed with amber yellow; throat, black, white speckled; quills varied with black and white;" length, over 35 inches.

This species is peculiar to Alaska and the Northwest coast. We have never seen it, and take the above description from Coues' Key. Little has been written about it, and its habits seem to be comparatively unknown.

The remaining North American geese are all included in the genus *Branta*, and are not likely to be confounded with any of those which have gone before, even by the least observant. Birds belonging to the genus *Anser* have the bill and feet pale or bright colored, and the plumage white or much varied in color; while those which fall within the genus *Branta* have the bill and feet black, and the head and neck black with white spaces, the general color of the body being gray. The common wild goose (*Branta canadensis*) is a typical example, and one which is known to every reader.

**BRANTA CANADENSIS.** Canada Goose; Gray Goose; Common Wild Goose. Tail of 18 feathers; head and neck, black, with a broad white cheek patch on each side; upper parts, smoky brown; tail, black, its upper coverts white, lower parts ashy gray, sometimes almost white, becoming paler on belly; about three feet in length. Variety *leucoparva* resembles the above, but where the black of the neck ends there is a broad collar of white. Under parts somewhat darker than in the Canada goose, to which it is about equal in size. Variety *hutchinsii*—Smaller than either of the above; tail of 16 feathers; about two and one-half feet long.

The Canada goose is found everywhere throughout North America, and breeds in many sections of the United States. There is some reason for believing that within the last ten years pairs of these birds have nested in Connecticut, though these may have been wounded ones which did not have strength to accompany their companions to the North. We have found them breeding in considerable numbers on the Upper Missouri, the North Platte and on other streams in the West.

During the migrations they are everywhere more or less abundant, and their loud honking as they pass over high in air is a sound familiar to the ear of almost every one. The habits of the wild goose during the migrations are pretty well known to all sportsmen, and the bird is universally acknowledged to be as wary and cunning as almost any game bird with which we have to do.

The variety *leucoparva* appears to be confined to the Northwest coast, while *canadensis* and *hutchinsii* are found almost everywhere. The latter is said to be especially abundant on the Pacific coast in winter. On the Atlantic coast we have often heard gunners speak of a goose smaller than the Canada, which appears a little earlier in the fall and a little later in spring than the common form, and which they termed the Southern goose. This is very probably *hutchinsii*. Audubon speaks of a bird mentioned by Maine gunners and termed by them Winter or Flight Goose, which was probably the same.

**BRANTA LEUCOPARVA.** Barnacle Goose. Forehead, sides of head, throat and tail coverts, white; wing coverts and interscapulars, bluish gray; under parts, grayish white; elsewhere, black or blackish; length, about 28 inches.

The barnacle goose is a European species, the capture of which in America has only been recorded three or four times. It will readily be distinguished from any others of our geese, and sportsmen would do well to keep a sharp lookout for it, and if they should be fortunate enough to bring one to bag, they should at once record it, and see that the specimen is preserved.

**BRANTA BERNICLA.** Brant Goose. Head and neck, black; a few touches on the side of the neck, and the upper tail coverts, white; above, smoky brown; below, paler, whitening toward the tail. Variety *algicola* resembles the above, but the black of the lower neck extends further backward over the breast. The white neck patches are also larger.

The brant is generally dispersed over the northern part of the United States during the migrations, the common brant being the ordinary form met with in the East, while var. *algicola* is much the most abundant on the Pacific coast.

**DENDROCYGNA FULVA.** Fulvous Tree Duck; Cornfield Duck. "Pale cinnamon or yellowish brown, darker on the crown; the nape with a black line along; bend of wing, chocolate brown; rest of wing, rump and tail, black, its upper and under coverts white; scapulars and foreback dark, with pale cinnamon edgings; bill and feet, blackish;" length about 20 inches.

As already remarked, the birds of this genus are not common except along our Southwestern border. In this genus the bill is longer than the head, and the legs are very long and have the tibia bare for some distance above the tibio-tarsal joint. In other words, the leg is bare above what is commonly but improperly called the knee.

**DENDROCYGNA AUTUMNALIS.** Autumnal Tree Duck. Blackish brown; crown, most of neck and fore part of breast, middle of back and scapulars; reddish chocolate; a patch on the wing, white; bill and legs, red.

Merely crosses our Southern border into Texas.

[TO BE CONTINUED.]

THE NATIONAL ACADEMY OF SCIENCE.—The fall meeting of the National Academy of Science was held last week in this city, the session lasting from Tuesday to Friday. The meeting, which was largely attended, was presided over by Professor March, Professor W. B. Rogers, the President, being prevented by ill-health from being present.

A number of interesting papers were read, most of them, however, on physical subjects. Prof. Alexander Agassiz, gave a most interesting account of the cruise of the Blake, and the conclusions reached from his dredging operations. The following abstract from his remarks appears in the *Times*:

After giving some details respecting the previous cruises of the Blake and the points intended to be elucidated by the several expeditions, Professor Agassiz said the results obtained had shown that the deep sea fauna, extended to a limit considerably higher than was formerly supposed—namely, to a depth of about 450 fathoms. At about this depth lay the outermost limit of another belt of animal life which he should style the continental fauna, and which extended from a depth of about 450 feet to one of 150 fathoms. To observe exactly the connection and relation of these faunas to each other was one of the purposes of the cruise of the Blake last summer. The coast of South Carolina was selected as a base of operations, and the region to be examined was laid out in regular sections. The first procedure was to run a line south of Cape Hatteras in an easterly direction, another north of Hatteras, and a third at Cape May. Each of these lines began at a depth of about 150 fathoms, and extended completely across the Gulf Stream. For a distance of 100 miles from the shore a greater depth than 150 fathoms of water did not occur at any point embraced in the survey, and there was very little variation from a general average, thus showing that the Gulf Stream courses along an immense plateau, which was probably the original limit of the continent. The breadth of this gigantic submarine plain was from 120 to 150 miles. Off the coast of South Carolina, at a depth of about 100 fathoms, the margin of an abrupt and very rapid declivity was found, and then for some distance a deep submarine valley. After this interval was crossed the ascent was equally abrupt. The external margin of the stream has not yet been determined, but its general topographical relations are now pretty well understood.

Prof. Agassiz next described the external margin of this vast submarine plateau and its extreme fertility in animal life. For a distance of ninety miles off the South Carolina shore our submarine explorers never carried a depth of more than 250 to 275 fathoms; but when the outer edge was once

arrived at the abruptness of the descent was somewhat startling. The ground fell for the first mile to the south after the declivity commenced full 150 fathoms, and for three miles' lengths 450, or 1,350 feet. It was along this margin that principally the zoological interest centered. The elevated plateau itself which adjoined the shore was practically swept clear of silt and mud by the ever-restless currents coursing over it; but upon its extreme margin the deposit was something enormous, and the expedition found at the outfall of the Gulf Stream a wealth of marine life larger than at any point in the tropics. The shot would sometimes sink from eighteen to twenty feet into this slimy mass, which had been cleaned from the level plateau by the action of the water, and here dropped in an enormous drift which was peopled with submarine fauna. Of course, owing to this freedom from silt, the plateau could not furnish food for any large development of animal life, and it was consequently concentrated in a narrow belt at the margin, which furnished an interesting field for investigation. The deposit did not appear to embrace any great variety of species, and was mainly remarkable for immense quantity rather than for variety or range. In summing up the results of his summer's work in connection with the *Blake*, Professor Agassiz reported that the important point was the proof that the deep-sea fauna of the Atlantic bottom extended shoreward to a depth very considerably less than had been heretofore supposed by naturalists. It had been ascertained that it was substantially identical with that of the Gulf of Mexico, while the fauna of the West Indian track was of the peculiar type he had styled continental. The current of the Gulf Stream being extremely strong, its track was peculiarly barren in forms of animal life, and the extension of the continental fauna from the West Indies northward was to be sought only along the edge of the plateau he had previously described. He would allude in conclusion to the great success of the expedition. Their facility in reaching had become something extraordinary in one practice, and the work they had been able to accomplish in six weeks was wonderful. When the *Blake* made her first cruise one haul a day was considered pretty active employment; the last day they were out they made eight hauls.

Professor Cope read an important paper on "Extinct Vertebrates," and Professor Marsh an interesting one on the "Dimensions of the Brain and Spinal Cord in Some Extinct Reptiles." Some of the Dinosaurians have brains scarcely larger than the spinal cord. In *Stegosaurus* the brain is not larger than a common sized tumbler, but there is an enlargement of the spinal cord in the region of the sacrum eight times as large as the brain case proper. The Academy will meet again in April, 1881, at Washington.

**PERSISTENT HOUSE WRENS.**—*Vail, Jour., Nov. 16.*—Editor *Forest and Stream*: While visiting a friend last summer I noticed an inverted collar-box nailed to the top of the wooden pump near the door and inquired why it was there? I was told that a pair of house wrens had taken up quarters in the pump and persisted in building their nest there, nor would they abandon their project until the box was furnished them. They then immediately took possession of it, built their nest and soon became so tame as to approach persons going there for water.

**INSTINCT IN EELS.**—The fishermen on Shinnecock Bay, Long Island, say that when the bay closes by the filling up of the inlet and imprisons thousands of eels that the latter can be seen in great numbers where the inlet was, when they wish to go to sea again. The bay is now closed and we are informed that near the point where the eels came in last summer they are now gathering in force, searching for the lost inlet.

## Sea and River Fishing.

OLD TIME FISHING IN TENNESSEE.

FRANKLIN, TENN.  
THINKING that it might interest some of your many readers to see a few lines from the backwoods and wilds of Middle Tennessee, I am induced to send you a few. My part of the State is nearly as old as the hills, and almost in the arms of the Capital of the Nation, with its about to celebrate its centennial this year. That shows that we are 100 years old, and yet all appearances indicate that we are quite young still. When Davidson County was laid off and Nashville was located, it was quite a wilderness, and a great breadth of land being embraced in Davidson County. In October, 1799, the Legislature of the State appointed a set of commissioners to survey and lay off out of Davidson and south of it a new county to be called Williamson County. One of our first fighting grounds. The commissioners proceeded to the discharge of their duties, and by January 1, 1800, laid off quite a nice county, located the county site, and called it Franklin, on the south side of Big Harpeth River, on a magnificent section of 640 acres of excellent level land; and in February, 1800, the county was established and we have been pecking away ever since. Ten miles south of this town was the Indian boundary, but some of them still claimed Big Harpeth River as the boundary, and were very reluctant to give up that boundary because the valleys of Little Harpeth, Big Harpeth and West Harpeth rivers, three powerful streams running across the county, were magnificent hunting grounds, abounding in bear, deer and other wild animals, and the streams with abundance of splendid fish.

My ancestors had settled in this portion of Davidson County two years before the county of Williamson was laid off, and among the very first who had dared to do so, and were the descendents who grew up with the country, fought the Indians with General Jackson, and aided in clearing up the wilderness and familiarizing themselves with the forests and streams. I am familiar with the stories of my fathers and uncles of the bear hunts, Indian fights and fishing frolics of the early times, of the great abundance of game and the wanton destruction of the same from the first settlement of the county to the present time. The story told of one of my uncles is something like this: The first year of his settlement in the county was 1789. Provisions were very scarce, and he had rather a large family, and all the provisions he was able to lay in for his year's support were five bushels of Indian corn and one hog. Being visited by some of his North Carolina friends, and they being told what his first supplies were, they asked my uncle how on earth he managed to support so large a family on so little. He replied he never lived better in his life. He said he used bear for meat and wild turkey for bread, and the children and servants subsisted on eggs and grew fat.

Shortly after my grandfather's settlement here he had occasion to cross over Big Harpeth River one day when the water was low, and he discovered an immense quantity of fish in the mouth of a little stream emptying into the river, and when he returned home he informed the boys of his discovery. To have a little fun, and also to get something to eat, they felled a tree and dug them out a canoe as quickly as possible, and launched it in the stream about five miles below where the fish had been seen, and paddled up to the place and readily found great numbers of fish. They pitched into the water with their paddles, and in a very short time killed enough fish to load their craft down, leaving just room for one boy to sit and paddle their boat homeward. In the meantime they sent runners across the neighborhood, notifying the neighbors of their catch, and to meet them at a certain place and divide with them. On the arrival of the craft at a point within a mile of their home they met their mothers and sisters, the matrons and maidens of their neighborhood, and they had a general division and scaling of fish among a merry time.

The streams were so well stocked with fish I have often heard my father say that when they wanted fish they would provide themselves with torches of a dark night, just paddle up or down stream, and the fish would jump into the canoe until it was filled and they would be compelled to extinguish their lights to save their canoe from sinking and from being swamped by fish jumping in. The principal fish then in the streams were what they called "trout," now you call them black bass, striped and speckled bass, red horse, black and red perch, suckers and cat. Great quantities of these fish swim in these waters until the cane was destroyed and the country cleared up; then they diminished by degrees, and they became quite scarce, the rivers having filled up to a great extent with gravel from the cleared land. Now we have somewhat of a fish protection law against seines or nets, and the waters are again filling up rapidly, and fine sport is offered to the angler, and it really makes an amateur angler sick to read anew the trout stories in your paper, and the fly-fishing and fun the anglers have, while we are confined to what you call bass or perch fishing. Well, there is a little more sport in it than you might imagine. I will tell you something about it, and maybe something about field sports.

Recollect I am about sixty summers, but I do not fail to go with the boys, and I generally come up with, if not ahead, of the best of them. We do not have any of those fine fish and one hundred dollar rods, and such fine and expensive tackle as the New York boys can afford, but for our rods we use the best native and Japanese cane. We send to Bates and get the finest hooks, the best gut for snoods, and prefer single to double snoods. You of course know Bates is rather crabbed, and I was in his store on one occasion and I was anxious to get the longest gut I could find to please the boys, and after looking over his lot some time, I said, "Mr. Bates, is this the longest gut I can find?" He replied, "Crust, yes, do you suppose one worm has a longer gut than another?" I subsided and took a few bunches. We use the best silk or Japanese grass lines and Meek's reels, which cost us from \$14 to \$21 each. In short we go out decently well rigged to take in the bass and jack, from one to fourteen pounds. The sport last fall was better than I ever saw it, and lasted from September 1st to 1st of December, and our parties, as I told, took in between 100 and 150 fish. Among ourselves, we say trout, black speckled, white and striped but your fishermen would say bass. Well, we will not dispute about that. If one of your best anglers could cast his hook in our clear waters and take a 5 lb. bass and he did not give him all the fun he wanted I am no judge of fun and frolic. I will wager no angler in the United States can tell a gamer bass story than I can.

Some time since a party of four of us went out, as we said, doing. Two of the other two fishermen, the other two knew but little about it. We went down the river from our own town about three miles and the day was hot. We came to a tall, rocky bluff and the sun was beaming down. I and one other of the party cast in at the foot of the bluff. I remained below and advised my friend to go on the top of the bluff and drop in where I knew he was likely to get a bite. He did so, and I threw out so that our lines ran pretty close together. In less than a minute my friend's cork (some of our fine fish corks) flew by him almost like lightning, and soon he gave it a quick jerk, and a five-pounder flurried out of the water about four feet and broke off his tip and about a foot off the end of his rod, and away went the fish. He came down to me and said he was done, for his pole was broken and he could not fish any more. I told him that was not so, he could fish as well with a stiff rod as any other, and I took hold of his rod, netted on the line to the end of his pole quickly and as possible, put the cork in my hand, and I told him to go back a little higher on the bluff and drop his minnow in the same place. He did so, and in less than a minute he brought up the mate to his first fish about ten feet out of the water. It fell back, leaving the minnow on the hook, which was dropped back to him, and this thing was repeated fifteen times by my friend, and he gave it up in disgust and laid himself and rod on the ground.

In the meantime another of the party came up and pulled out the fish in the same way three times and gave it up. By this time the third, who was a splendid fisherman, came up, and he dropped in and brought up the fish three times and lost him, and he gave it up. I was lying by watching the operations. I then told the party that I would bet \$100 to a nickel that I could call up a country boy, who was below with my pole, and that he could catch that fish in one minute. They laughed at me.

I called the boy up, told him to lay aside my pole, take hold of the broken pole and take out that trout. He did so and his first effort failed. He dropped back immediately, and in less than a minute dropped the trout in my hand. I took him off the hook myself, and he weighed 2½ lbs. and was a male fish. On examination we found that the skin which holds the rim of the mouth had all been pulled off, except about the size of my finger nail, and by the old-fashioned jerk of the boy the hook was jerked into the roof of the fish's mouth and he was done.

After we left the bluff the boy went off and got a net and caught the first fish which had been hooked. It was a female and weighed 5 lbs. The upshot of all this was that my friend had dropped his minnows within a ring, being watched by the male and female trout. When the female had been wounded she ran off, but the male fought for the nest to his death.

Now if any man can produce and show a gamer fish than this two and a half pounder I will surrender. I find that I am growing rather lengthy, and will stop, promising to tell you something more about our fish and fishing and something about our field sports, quail, pheasants and foxes.

J. B. M.

## FISHING FOR COUNT.

THE Albany Evening Journal, whose editor in chief, Mr. Geo. Dawson, is a salmon angler of perhaps fifty years standing, takes a text from FOREST AND STREAM, and comments upon it in no uncertain tones, winding up with a personal letter from Mr. Dawson himself. We give the text and sermon entire.

We have spoken in no uncertain tone upon several occasions of the destructive practice of killing small fish for the purpose of swelling the count. We intend to keep it until the whole body of anglers join in the effort to cry "shame" on the man who is guilty of it.—*Forest and Stream.*

This "fish for count" has depopulated half of our trout streams and will soon destroy the best salmon rivers on the Continent. Last year three titled finkies from England killed six hundred salmon on the Cascapedia. Most of these were taken thirty or forty miles from any habitation where they could be utilized. The result was that most of them had to be buried as offal. But this disgraceful fact did not accompany the published score, which was the rounds of all the sporting papers in the world as the best catch on record and as proof of the great skill of the fellows who perpetrated the slaughter.

But there was no special skill about it. The river was simply full of fish. Every pool was packed, and the only thing necessary was to cast, strike and kill as rapidly as muscle and gaff could perform their office. The fellows were "fishing to count," and they kept up their slaughter so long as the season lasted.

And what was the result? Of the six hundred salmon killed quite one-half of them were full of spawn. The killing of these three hundred ripe fish was the killing of three hundred thousand embryo fry and a most ruinous draft upon the producing power of the best salmon river in the world.

The effect of this disgraceful slaughter was seen the present season, when (we are told) not one-quarter of six hundred salmon which were taken visited the river.

Anglers who visit a stream where fish, whether trout or salmon, are abundant, will, unless they are the merest cockney pot-hunters, keep within sportsmen-like limits in their catch. To "fish for count" where the count, because of the abundance of the fish, can be made ten times what is reasonable, is to violate every law of the "gentle art."

As a case in point, and to show how an angler should behave under such circumstances, we will join a note sent to one of the neighborhood who was well known to "fish for count," unless it was to catch the exact number needful for use or for legitimate distribution.

ALBANY, NOV. 6, 1890.  
The talk we had yesterday on the bad habit of "fishing to count" called to mind an incident of my angling tour in the wilds of Canada last summer.

The salmon not having yet shown themselves in our river, myself and the Judge determined to visit a trout lake we had heard of a mile or two from camp. We reached the lake in the middle of the afternoon, when the sun was a-glow, and found it an hour's work for each of us to take fish enough for supper. But we took them and relished them.

As the shadows began to show themselves upon the surface of the lake the trout began to show themselves also in such numbers as to render such a party of two almost literally a boiling pool, and the sun went down determined to fish thirty minutes, expecting to be able in that time to kill all we should need (six of us, including cook and guides) for an early breakfast.

I cast from the shore. At every cast I had a rise and a strike, and at the end of ten minutes I had landed *twenty-five half pound trout*. Delicately believing that that number would be sufficient for breakfast, I reeled up, although ten minutes of the allotted time still remained. The temptation to keep on was very strong, but during my forty years of angling I have only remembered two instances—and those I should like to forget—when I took more fish (either trout or salmon) than we could either consume in camp or distribute, in eatable condition, to those who were glad to get them. Those who do more than this are rascals, and yet there are a great many who do more, and yet claim the honored title of "brothers of the angle."

Nor is this spirit of slaughter confined to anglers. Although no hunter myself, in my angling rambles I have often come across raving carcasses of deer that had been wantonly slaughtered by "coveys." I hope you will help educate up to their duty all who have a taste for the chase or love to go a-basking.

G. D.

THE LARGEST TROUT.—It is an interesting fact to know the extreme size attained by any fish, and we do not remember to have seen the black fish, or tautog (*Tautoga onitis*), recorded as a fish of great size. The ordinary specimens are from one to five pounds, with an occasional ten pounder. Last week Mr. Blackford had one which tipped the beam at twenty-one pounds.

RHODE ISLAND.—New Bedford.—The wreck of the steamer Rhode Island is furnishing a good fishing ground for most of our fishermen at present. They fish for the sunken cargo which is yielding a rich harvest. Some few boats still catch a mackerel, others try for cod and blackfish, William Hughes and Bill Brown being high line, catching 800 lbs. of blackfish Tuesday, 9th.

FISHING NEAR NEW ORLEANS.—New Orleans, Oct. 8.—Mr. Thorn, Mr. C. Meile and myself went on Sunday and caught eighty fine fish, forty sheepsheads, balance redfish or bass and sea trout. The fish were caught in "back Bay of Bolivia," Miss, just the place for Northerners gentlemen wishing nice white trout. Can reach New Orleans in a short run of three hours by rail, visiting our French Opera and different theatres. Plenty of ducks and snipe, etc.

J. D. S.

—The photographic copy of "Fysshynge Wyth an Angle," by Dame Juliana Berners, A. D., 1496, is a handsome "plumfin" in the old "black letter." Our readers will do well to remember that we have several copies of the delightful old book, edited by Mr. George N. Van Sieten, handsomely bound, and in good plain type with the quaint spelling preserved, which we can supply at \$1.50 per copy. (A few rubbed copies at \$1.25.) Send your orders to this office soon.

THE THOSE RANGELY TROUT SPAWN.—Rangely Lakes, Me., Nov. 12.—It seems that your correspondent, whose article appeared in a late issue of FOREST AND STREAM, under the head of "Spawn-Fishing in the Rangely Lakes," has a very good idea of the use of the trout as put to that are taken out of season by gentlemen authorized to fish by our Fish and Game Commissioners. These trout, after being caught with an artificial fly and carefully handled, were put in tanks prepared for them, and when ripe the eggs were taken from and de-

positioned in the hatching-house and the trout, uninjured, returned to their native element. A large part of the trout taken by these gentlemen before the close season (when they had a perfect right to do what they pleased with them) were returned in the same way. It is too true that many large trout were taken at the Upper Dam this fall (previous to the close time) by using spawm for bait. The best remedy for this we have would be to catch mud-darters and fish bull-tinkered just once more, and after the first of September (if not before) to have trout taken in no other way than by fair angling with the artificial fly.

F. C. BARKER,  
Capt. of Stmr. Quosacco, on Moosehucknaguet Lake.

## Fish Culture.

### WHY LOBSTERS ARE SCARCE.

THE New Haven (Conn.) Register has been interviewing Mr. Fuller, of the Long Wharf Fish Company, on the subject of fish, lobsters, etc., and Mr. Fuller says, in speaking of the latter:

"Lobsters, which are a favorite article of food in the summer, are kept alive in cans. They are a peculiar sort of sea-bird, are lobsters, and they are a sort of communists who live very much by themselves and in selected localities only. Ten years ago the Long Wharf Fish Company required a half million pounds of lobsters to supply their customers, but now \$50,000 pounds will fill the bill. Then the lobsters were worth \$2.50 to \$3 a hundred pounds, now they are worth \$6, the reason for the increase in price being the great demand for the fish and the limited supply. They formerly retailed for four cents a pound, and now the price is from eight to nine cents, and where a man could once get enough lobster for a good hearty meal for a quarter he has to pay a half-dollar. There are two reasons for the marked increase in price, the demand for the fish, and their scarcity. Lobsters have been hunted very closely for the past ten or twelve years, and the result is that they have not been allowed to grow to the necessary age for propagating. A lobster has to be three years of age before it propagates, and until they reach about that age they are not good for much as an article of food. Until recently the laws of none of the States looked out for the preservation of the lobster. The laws of this State prohibit the catching of lobsters on our shores and within six miles in length. The laws of New York, Massachusetts and Maine prohibit not only the catching, but the exposing for sale, of lobsters under 10½ inches in length, and these laws are expected to help preserve the lobster as a food fish. A dozen years ago the lobsters which came to our market were brought in smacks by fishermen, who bought them from parties owning the pots in which they were caught. The lobsters used to run then from three pounds up to twelve and fifteen in weight, and dealers refused to take those weighing over ten pounds, and those that were to large to be saleable. Smackmen used to buy lobsters in those days at three pounds, that is, each lobster was counted as weighing three pounds whether it weighed three or ten. Those weighing above ten pounds were not accepted, and the lobsters were purchased at so much per pound and sold in the same way. He who caught them found that when he came to be paid each lobster weighed three pounds, no more, no less, but he who bought of the smackmen paid for actual weight, so that the business was a very profitable one for the smackmen. Then the lobsters were average about five pounds. Now it is a rare sight to see a five-pound lobster that it then was to see a fifteen-pound, and a \$10 bill wouldn't buy a ten-pound lobster now-a-days. The lobsters that find their way to the market now average only from one and three-quarters to two and a quarter pounds. The reason for the decrease in size is that all the large seed lobsters have been caught up on the principal fishing grounds and only the poorly-inclined offspring remain to be caught and eaten, so closely have they been hunted for during the past ten or a dozen years.

"The lobster is a grubber on the bottom of the sea, and when caught and plucked and brought to market here some funny facts are brought to light about them. One of these is that when a lobster is given his liberty in the waters of our harbor it will always strike out for the east, none going to the westward. This is proven in this way: occasionally one of the cars in which they are kept at the mouth of the harbor will be struck and only the poorly-inclined offspring remain to be caught and eaten, so closely have they been hunted for during the past ten or a dozen years.

MAINE SARDINES.—The Sullivan Bulletin publishes an interesting account of the work done at the sardine factory at East Lamoine. The fish used are the smallest herring such as used to be thrown on the ground for fertilizing purposes, and the labor involved in their preparation for market is thus described: First, the boatman goes on a visit to the weirs in Frenchman's Bay and is not successful, around Mr. Desert and through Union River Bay into the rivers and among the small islands where weirs are built, and if possible gets fish into the dories he has in tow; then through log or blow makes the quickest time possible for the work. Oftentimes he returns without any colors being set, that being the sign of "no fish," when successful he runs in to the track laid down to low water and the dory having the fish is placed on a car and drawn up under a long shed, the fish are washed and sorted, the small ones placed on long tubs, and the larger ones on buckets. This is called the sorting shed. Alongside these tubs, having boxes ranged on them, are young boys and girls, armed with small sharp knives, who cut the fish into just the length for the sardine boxes, and when these boxes are full they are passed into another room called the flake room; they are then taken and placed singly on flakes made of wood, and after dripping are passed into the drying room—a close room on the second floor with racks into which the flakes of fish are passed. Below is a very large stove, burning wood, which soon dries the flakes

of fish. Thence these dry flakes are passed into the frying room where a large furnace or oven is at fever heat, and the fish are placed in large pans and with great care are fried. Again the carriers take them and pass them to the packing room, where the quick fingers of women and girls place them in boxes and pour pure olive oil and other seasoning preparations over them, and into another room they go called the heading room, where each box receives the heading or cover. From this place the boxes pass to the sealing room, where long tables with portable furnaces and all necessary tools for soldering purposes are found, and young men with soldering irons soon prepare the boxes to be passed into the bath room; a large tank, holding more than a hoghead of water, heated to a boiling pitch, receives them, and after remaining in the bath a certain time, the boxes are passed into the examining room, where every box is examined carefully for leaks, and if any are found they are passed back to the sealing and bath rooms. These that are passed are sent to the cleaning room, where large box-like tables, filled with dry sawdust, receive and deft little fingers cleanse them of every particle of oil and dirt, and they are then passed to the final examining room, every box pressed between fingers and thumb to see that they are all perfect. The final packing room receives them, and they are packed one hundred boxes in each case, branded and ready for shipping.

"The boxes in which the sardines are packed are uniform and bear the same marks in all the several factories. Making the tin boxes is a separate business requiring a large amount of machinery, and as the business increases the several companies will have a manufactory of their own.

"This company, and in fact all the companies, pay their work-people every Saturday, by the piece, or, as it may be, by the day.

## Game Bag and Gun.

### THE RISKS WE RUN.

A SHORT time before the war the writer, a young lawyer, full of hope and manly ambition, a resident of the beautiful country town of Magnolia, in the southern part of Arkansas, fond of his gun and the woods, and never missing an opportunity to indulge in his favorite and health-giving pastime, was, on a sultry day about the middle of September, sitting in the west part of the office poring over some legal law question, when a little darkey entered, having a pair of saddle bags across his shoulder. Fumbling in his pocket he produced a bundle of newspapers, which being unwrapped disclosed a modest little *bulletin* which he handed over. I proved to be short, pointed, but to me full of meaning; it read thus:

"Protracted meeting at Christy Chapel next Friday, Saturday and Sunday."

Now, there was nothing apparently in this notice calculated to stir a man up, but short that it was, and only referring to a church meeting, yet it whispered to me of a peaceful home, a future of love and bliss, shared by a pure, noble, warmhearted girl who was then thinking of the poor, ambitious young attorney, and the knowledge of this fact sent the warm blood tingling to my finger tips.

I gathered up the books and State reports scattered about my chairs, placed them on the shelves, consulted the office docket, and found one case before Squire Nelson set for Friday. That put a quietus on starting at once. So, next day, after being granted a continuance, I hurried through my preparations ordered my buggy for one o'clock sharp; and dressed in a light summer suit, part of which was white pants and close fitting cloth gaiters. One o'clock found my rig at my office door.

It would be supposed that a person dressed as I was would have no use for a gun; I thought different. I knew that the father of the young lady who had sent me notice of the meeting at Christy Chapel was a great huntsman, a splendid shot, kept a pack of hounds and was in the saddle half of his time behind them, and I thought it best to be prepared for either church or the chase. I took my gun, a six and a half pound, thirty inch, fourteen gauge, highly finished double German, with a supply of Ely's wire cartridges. Also pulled out my high waterproof boots from their corner, but after reflection put them back, for really I had no thought of hunting.

I started on my journey of twelve miles to the large, highly-cultivated plantation of J. T. Furlow, Esq., situated on the south side of Horsehead Creek, in the southern part of the county. My horse was fresh, I made good time and in due time reached my destination, and found that the gentlemen of the house were out on a fox chase.

"Had evening when the dried huntsman returned, a new and extended hunt was planned for the morning in honor of me—I could save one—unexpected visit. This did not suit me, but I said nothing. Had I not told the old gentleman the object of my coming was a hunt, and he knew I loved the sport, so I held my peace.

Saturday morning saw five of us mount. Mr. F., turning his horse toward me, stopped suddenly, looked at my linen pants and cloth gaiters and queried, "Where are your boots, and your gun? You are down the bottom with those shoes. Forget your boots? That is unfortunate. However, you can take the stand in the overboard, there is no underbrush there." So each one took their way to their allotted places, Mr. F. taking the dogs down the bottom, intending to drive up the creek. My stand was in the centre of the bottom in a dense, unbroken forest, at a point where the last spring overflow had swept the ground clean of all rubbish, leaving a space of about two acres as clean as a threshing floor, with the exception of a large hollow log that had stranded near the centre. The standing trees were wide apart, with spreading tops that shut out the sunlight. After securing my horse in the edge of the thicket, I selected the stranded log for my stand, but after remaining there a short time I moved forward and stood behind a large spreading oak, some twenty steps from the log.

The forenoon had passed in silent watchfulness and waiting to hear from the dogs, which seemed to be playing from side to side of the bottom, and down the creek, but coming no nearer. Past experience had taught me to sit, and to keep in silence. When the sun had reached the meridian I had intended to eat my lunch; but I deferred it on account of a strange chilly sensation that crept over me. This feeling returned at short intervals for about half an hour. I paid but little attention to it, but as time passed the feeling grew more intense. Sharp, tremulous thrills ran up my back, leaving a twitching sensation that made me very uncomfortable. This continued for about an hour, and settled into a deadly fear.

I trembled from head to foot. I glanced furtively from side to side, but all was clear and still. I strove to brace up against it, tried to shake it off, to no purpose. The more I tried to master it, the more intense the feeling grew. At length I thought of a panther, for they were no strangers in the bottom. Perhaps there was encroaching in the branches overhead ready to spring on me. I held my gun firmly, on full cock, searched every inch of the log and looked overhead on each side and behind. I could see nothing. I held my post, rigid as a statue. It was a perfect calm; all was silent; the stillness was oppressive. That suffocating sense of danger grew upon me; I was afraid to move, yet could hear, could see nothing to cause it.

Calling up all my fortitude, I determined to shake off the terror that had seized me, and I had partially succeeded, when a sharp sound, quick as the stroke of a battery, went through my ears, adding intensity to my high-strung nerves. Not knowing where the strange, and to me new, sound came from, my eyes searched the ground, first on my right, then in front, next on my left, all in quick succession, when the same infernal, blood-freezing sound was repeated—nearer, clearer, deadlier than before. Quickly peering over my left shoulder I saw, coiled up, within three feet of where I stood, a monster rattlesnake, its head flattened out, swaying from side to side, drawing back, preparing for a spring, its tail erect, and for the third time sending forth that blood-curdling whirr-r-r-r. All this took place and was seen in a second of time, and while my eyes were fixed on those of the reptile its jaws were opened to their full extent; then the bright barrels of my gun came in line with my sight—how it came there I know not—I had made no effort in that direction, but there they were. I pressed the trigger, then a flash, report, and a heavy blow on the calf of my right leg. I had missed and was struck. Miles from a house, no help near; death stared me in the face.

"The first thought was to spring from the tree and fling my gun. I pulled out my handkerchief and tied it round my limb, using my knife as a twister. The snake was slowly lifting and I saw the repulsive monster writhing in its death agonies, headless, at my feet. I then examined my limb. My fine white linen pants, from the knee down, including my dainty gaiters, were smeared with the blood of the snake. It struck, and that hard, but headless. My powder was too quick for it and had blown the head to atoms while it was in the act of making the spring. I actually kissed my faithful little gun, for it had saved my life.

I went off and sat down, sick and trembling, my lips and throat parched. After a rest I went to the creek, washed my temples and drank a mouthful of the tepid water, returned to my stand, loaded my gun and calmly investigated my now past danger.

The snake had its den in the stranded log. It had seen me standing motionless by the tree and had crept with the stillness of death toward me, as its broad trail on the bare, dusty ground showed, and while my thoughts had been directed in search of a panther in the tree-tops it had escaped my notice on the ground behind me. It must have made slow progress, as the feeling of danger was on me more than an hour, and when it reached striking distance gave the first note of warning. But what invisible power told me of my danger? Can anyone explain it? I cannot; it is a mystery to me even to this day.

I measured the reptile, which, without the head, was a fraction shorter than two legs of my gaiters' barrels. I cut off the rattles, which were nearly eight inches in length and eighteen in number, with some buttons. This ended my hunt that day.

When I returned to the plantation with my trophy I found the other hunters there before me and two large bucks hung beneath the stoop of the smoke-house. After recounting my adventure and exhibiting my pants and gaiter, the old gentleman remarked: "I thought you ought to have your boots on; you will bring them next time, I think."

I was easily persuaded to stay over the next day. The wide-spreading grove that surrounded the cool porches of the dwelling of my generous host was so inviting that we concluded not to attend Christy Chapel after all. It is but fair to state that the faithful little gun that saved my life was a short time afterwards forcibly taken from me, while returning from a squirrel hunt, by a squad of Texas troopers then on their way to—us they stated—Chicago. CARE ROCK.

Chas. Girardeau, Jr.

We invite the special attention of the readers of this column to our Proposition to Gentlemen Sportsmen, to be found on another page.

### NORTH CAROLINA QUAIL SHOOTING.

I HAVE just returned home from a thoroughly enjoyable shooting trip to North Carolina, and as you have requested your readers, for the benefit of the rest of their species, to give the result of such expeditions, I send you this account in the hope that some forlorn, disheartened brother of the craft "seeing, may take heart again," and follow in my footsteps, for I can assure him that if he will take the point I will mention as a center he can go in any direction and find all the quail shooting he could, would, or should desire.

Early in the year past I received from a friend a "trip South to see if the shooting was really what it was." "Cracked up to be," and after having consulted guide books and wearing our friends with inquiries, it suddenly occurred to me that the likeliest person to tell me where to go would be the man who cultivated my inherent love of the field, and who taught me the first principles of "holding my pipe straight," now a resident of North Carolina, so to him I wrote. His answer came at once—"Come down here," and although we had rather settled on Virginia as a temporary abiding place, we attered our plans.

Saturday afternoon, October 30, found us on the deck of the steamship Old Dominion, bound for Richmond, for, although we could have gone by rail all the way, we found it easier on the dogs and less fatiguing for us to travel part way by steamer. The fare to Salisbury, North Carolina, by rail or steamer is the same (\$22.80). The company makes no charge for dogs, and the baggage master took care of them and they were fed and watered, and we were apparently satisfied with the gratuity of a dollar for each dog that I gave him.

Now we are fairly off and run down the bay in a cold northeaster, with its miserable, penetrating drizzle, until off Sandy Hook Fred suddenly realizes that all is vanity, and "seeks the seclusion that the cabin grants." I, after vainly essaying to eat my supper, follow suit, but after lying in my berth a while, feel quite snapper, and actually have the malignity to chaff him on his unhappy couch and remind

SOUTHAMPTON SPORTSMEN'S CLUB.

THE well timed and highly interesting article which recently appeared in your valuable journal calling attention to the practice of snaring birds by farmers on Long Island, with the destruction of the favorite sport of shooting, and pointing out the necessity of some new club with young blood who will not pursue pigeon shooting as if this was the only sport left, does not, I beg leave to assure you, apply to one club, at least.

Situated at the east end of Long Island is an association of twenty gentlemen who during the short time of their existence as a club have done much toward the protecting of game and promoting the interest of shooting generally. I refer to the Southampton Sportsmen's Club, chartered under the laws of the State in 1878. They have acquired preserve lands to the extent of 8,000 acres. By a resolution the membership is restricted to the number of twenty members; one-quarter being shining lights of the New York bar, the legal rights of the club are therefore fully protected.

At a recent meeting it was decided to employ counsel to prosecute persons detected shooting or snaring game in violation of law. Judge Thomas Bisgood was assigned to this important work, and a man was employed to detect persons guilty of trespass. Within a few days two persons were detected in the act, one being a wealthy farmer of the vicinity. It is determined to prosecute these parties to the full extent of the law.

Let other associations follow this example and there will soon be a stop put to the destruction of a sport which in the past made Long Island famous.

At the meeting mentioned it was resolved to stock the ponds on the lands of the club with bass. RANIER.

KENTUCKY NOTES.

MILL SPRINGS, Ky., Nov. 1.

QUAIL are not so plentiful as we were led to hope during the early summer. No good reason assigned. I was out a few hours Friday and put up but two half-grown doves. As they were not out of the "peeps" I returned homeward dejected with the performance of my young partner, who evinced a wholesome recollection of a dose of No. 10's, soon followed by one I was startled to find 3's, administered last season at forty yards. It cures him of his uncontrollable propensity to flush and chase, which had been developed by the boys stealing him out to trail squirrels before he had been worked on quail. Tail and head in line, the ears protect the eyes, and I have in every instance found a charge of 8 to 10's the most soothingly persuasive argument at forty to fifty yards I ever submitted to a refractory worker in the field. What sportsman has not had similar experience and found little comfort in thinking "4's and 11's" loud enough for his companion to shrewdly guess the current of his feelings? I would not be understood as an advocate of indiscriminate use of shot, but experience has created within me a weakness for the remedy in malignant cases, having always found it specific. But mallards and bluewings are appearing in small bunches. Pheasants plentiful in mountains, turkeys scarce. No pigeons. Squirrels migrated last fall and have but just begun to return. No parties have been deer-hunting as yet. Bears are represented as plentiful on our favorite hunting ground near Tennessee border.

A neighboring paper lately published a paragraph to the effect that some destructive epidemic has attacked the deer in the vicinity of a summer resort or two, and that as many as fourteen carcases had been stumbled over in a day. A mosquito-net is a thick fabric in comparison with that fabrication. KENTUCKIAN.

MORE ABOUT WILD RICE.

I NOTICE an article in your last issue on wild rice, over the signature of "Lutron." He remarks: "There seems to be a desire among sportsmen to introduce this most attractive water-fowl food where it is not natural to grow. Artists are FOREST AND STREAM, seems to me, will lead those who are going east to plant to failure. Some time ago the FOREST AND STREAM recommended planting in six feet of water. I have never seen a spear reach the top and head out at that depth."

Now, not having the slightest reason to doubt the correctness of your correspondent's observation (I have never been in Michigan), yet in this locality my experience and observations differ very widely from his. For instance, in Rice Lake, a body of water twenty-eight miles in length, with an average width of three miles, the wild rice is frequently found growing in water from six to eight feet deep, and this is no exceptional case, but the rice is found from one end of the lake to the other growing at that depth and producing an abundant crop of plump, well-filled grains, upon which not do the various kinds of ducks and other water-fowls feed with avidity, but also the Indians (who have an exclusive right to it from the Government) collect it in large quantities, both as an article of food and for planting purposes. They prepare it by roasting by the fire, or roasting, until the water has nearly all run off, and then fanning off the chaff. Being prepared in this manner and boiled, it forms a thick, mucilaginous paste, which is very palatable and highly nutritious.

In 1876 I sent twenty-five bushels of rice to Campbell's Bay, Ottawa, where it was sown in water from two to five feet deep. It grew well, and in the fall produced a good grain crop and extended rapidly. The person trying this experiment and his neighbors, being so well pleased with the result, have nearly all the year since stocked with rice this present year from me. They have also obtained eighty bushels of seed to be planted in the adjacent waters.

As regards the sowing of this rice, I consider the fall the best time; but with care, and having it kept thoroughly dried, it may be sown very successfully in the spring.

One correspondent asks: "Will any one tell me whether or not thoroughly dried rice will grow?" I can verify that it will, having dried it for six months before sowing. In fact, that the rice will grow better when it is dried, and, in fact, it is liable to heat and turn moldy, which would destroy the germinating principle and render it worthless.

Your correspondent also states that the rice that he examined was sown as early as March 20 to 25, which is much earlier than it does here. As soon as the rice disappears from Rice Lake, which is from the 15th to 20th of April, the ducks appear in great numbers and feed on rice by diving for it on the old rice beds in water from ten to twelve feet deep, the water being higher in the spring than it is in autumn. I have watched those birds feeding and shot them, and on examining their stomachs found them gorged with rice; but none of the grains had shown any signs of sprouting at this time.

A year ago this fall I sowed a peck of rice which had been extra well dried. This was planted in water four feet deep, on mud and gravel bottom. It made its appearance about the middle of June and ripened the first of September, producing a fair crop. C. GILCHRIST.

How it is ELSEWHERE.—The game grounds of New York, are not the only ones which are being depleted of their game birds by the trappers. Commenting on the FOREST AND STREAM's remarks about the opening of the quail season the Evansville, Ind., *Argus* says:

In this part of the country the birds are nearly all fully grown, though we have seen since November 1 two coveys of birds that were only half grown. Quail are becoming very scarce in this section of the country. A few years ago an average shot could get from forty to sixty birds in a half day's shooting, without much trouble. Cold weather of two winters ago killed a vast number, but on an average the weather does not have one-tenth the bad effect on quail that it netters do. There is a law in this State regarding the offering for sale of netted and trapped quail, yet never was a law more entirely disregarded. Merchants constantly offer them, hung up boldly outside of their doors, and never a word is said to them, though there is, or is supposed to be, a Sportsman's Club in this city. Various devices are resorted to by the pot-hunters to deceive buyers. The most general way is to pick the netted birds, hang them up and then blow shot at the passer by the side of the head, so that on the naked birds, which look very much like real shot marks. As it now is, there is no good shooting in this neighborhood. This vicinity is overrun with boys and reckless hunters, who think it is a good joke to shoot hogs and cattle and even horses. Is it any wonder that farmers make no distinction between good and bad hunters, and order all off their grounds? What shall be done? We put this question very respectfully to the Sportsman's Club, hoping that they will take some steps to see that the game law is at least one, if enforced. If things continue as they have been, a day's good quail shooting will be a thing of the half-forgotten past. We hope to receive some communications on this subject. True, many of us do not hunt, but for the benefit of those to whom hunting is their only relaxation from business, for Heaven's sake let us do something, or sell our guns for old iron.

EXTINCTION OF QUAIL.—Watson, O., Nov. 20.—Your correspondent, "A. S. P.," speaks of quail treeing, and says "of course" the quail remained treed "but an instant." I have shot a number of quail this season and I notice whole flocks very often scatter and take to the trees, and when they tree they stay treed until the hunter gets almost close enough to shoot. One treed this week while I was shooting in the flock. My dog pointed two on the ground within 200 yards of the treed bird. I shot the birds my dog pointed and the bird in the tree remained treed until I went toward him. He must have remained treed five minutes at least and was not disturbed by my shooting. As to ruffed grouse, I know that some market hunters in the north part of our country (Fulton) use a cur for hunting them altogether. The cur barks when the grouse come to the trees, and they alert in the trees and the market shooters pick them off. Quail-shooting here, I fear, will soon be used up. The pot-hunters take cold days and evenings for their work, find the birds huddled to keep warm, and then they villainously destroy a whole bevy at a single shot. I have heard of many such instances and have seen the marks of their work myself. The sportsmen here are agitating a law against marketing quail, and for one, I am in favor of it. I don't believe in giving a premium to pot-hunters and quail trappers, and they alert in the trees and in one vagon to-day, and probably not twenty-five of them were shot on the wing. Let us stop this slaughter.

W. H. H.

THE sportsmen hereabout will soon find quail coming into market which bear no signs of having been shot. These are "trapped" birds, and the legitimate sportsmen should see that parties offering them for sale should be arrested and punished.—Harrisburg (Pa.) Patriot.

We invite an expression of opinion respecting the scheme to secure the protection of game, an outline of which will be found on our editorial pages.

GAME LAWS IN MAINE.—Machius, Me., Nov. 12.—The article in FOREST AND STREAM signed "Bangor," and its answer, by Everett Smith, Esq., Commissioner Fisheries and Game for Maine, show that sportsmen residents of Maine have something to do the coming winter. Let us be calm and unselfish and make our plans. I will state as near as I am able the wish of the sportsmen in this part of the State. We would like the season for deer to open Sept. 1, and close the same as at present for this reason. Temptation is strong to break the law when by accident a deer is seen while shooting ducks, grouse, etc., besides it is impossible for wardens to prevent gunners killing them when the woods are full of hunters, nor is it reasonable that they should not, and they are in good condition this season, and moreover, the number killed would be small. Yet, if "no tinkering" is the wish, we yield and go in for what we have, only plan for the future enforcement of what we now have. We are decided that the dog clause is proper and needs no change, that pot-hunting is a nuisance and an injury not only to the community, but to the hunters themselves, as the money that would be paid for guides, transportation and supplies would much more than balance that received for the game now killed. Game is really a luxury, but its pursuit is still greater one to a large portion of our hard-worked business men, besides its importance is growing rapidly in the opinion of our best medical men, who are now giving their attention to the diseases of the brain, its treatment both preventive and curative, and as a general rule this class who need the rest and change, that Maine forests and lakes can give, are abundantly able and willing to pay liberally for the same—examples: Bangor and Moosehead. I believe nothing short of paid wardens, and a mischievous, and, therefore, special wardens, to be paid by the State and under the direc-

tion of Commissioners, also detective service for special work when Commissioners deem proper, with an appropriation to cover expenses.

I am over fifty years of age, but still enjoy the woods. Never killed a deer in my life, but expect I shall every time I should my rifle. I spent the first week in October with a small party at the Mopang. I need not tell you that we all decided to spend two next year.

Let us hear from others.

OLD TUG.

GAME IN PENNSYLVANIA.—The Harrisburg, Pa., *Patriot* has this to say about the game in that vicinity:—"George Keller, a well-known Hummelstown successful wing shot, is slathering the quail at a lively rate down the Lebanon valley. The pheasant tribe is beginning to be thinned out pretty well on the chestnut ridge, between Hummelstown and the ridge back of Campbelltown. Mr. William F. Lewis, of Reading, a famous sportsman, is playing havoc with the ducks and other game in the vicinity of Millersburg. He is the guest of Mr. Roland Freck, the postmaster at that place, and intends to remain in the valley a full week. An up-town crack shot and into a covey of birds out the Jonestown road yesterday with a young setter dog and succeeded in bagging five out of a flock of eight old and very plump birds. A party of hunters from Harrisburg, among whom was our old friend W. B. Meetch, Esq., Register of Wills, we learn, shot fourteen wild turkeys in one day on a trip to Clark's valley recently," and it was a poor day at that for wild turkey shooting. "—*Ligues Register*. The Nimrods residing along the base of Iobert's, Kittatinny and Peter's mountains, and in Powell's, Robert's, Stony Creek and other valleys, report quail, grouse and wild turkeys scarcer than in former years. The old foresters along the several mountains north of the city attribute the scarcity of game to the destructive fires on the mountains and hillsides late last spring, when, they aver, all kinds of game were driven off and their haunts destroyed, and that the young of grouse, woodcock and other species of game were killed to a considerable extent.
